

# LM2672 SIMPLE SWITCHER® Power Converter High Efficiency 1A Step-Down Voltage Regulator with Features

## General Description

The LM2672 series of regulators are monolithic integrated circuits built with a LDMOS process. These regulators provide all the active functions for a step-down (buck) switching regulator, capable of driving a 1A load current with excellent line and load regulation. These devices are available in fixed output voltages of 3.3V, 5.0V, 12V, and an adjustable output version.

Requiring a minimum number of external components, these regulators are simple to use and include patented internal frequency compensation (Patent Nos. 5,382,918 and 5,514,947), fixed frequency oscillator, external shutdown, soft-start, and frequency synchronization.

The LM2672 series operates at a switching frequency of 260 kHz, thus allowing smaller sized filter components than what would be needed with lower frequency switching regulators. Because of its very high efficiency (>90%), the copper traces on the printed circuit board are the only heat sinking needed.

A family of standard inductors for use with the LM2672 are available from several different manufacturers. This feature greatly simplifies the design of switch-mode power supplies using these advanced ICs. Also included in the datasheet are selector guides for diodes and capacitors designed to work in switch-mode power supplies.

Other features include a guaranteed  $\pm 1.5\%$  tolerance on output voltage within specified input voltages and output load conditions, and  $\pm 10\%$  on the oscillator frequency. External shutdown is included, featuring typically 50  $\mu\text{A}$  stand-by current. The output switch includes current limiting, as well as thermal shutdown for full protection under fault conditions.

To simplify the LM2672 buck regulator design procedure, there exists computer design software, *LM267X Made Simple* version 6.0.

## Features

- Efficiency up to 96%
- Available in SO-8, 8-pin DIP and LLP packages
- Computer Design Software *LM267X Made Simple* version 6.0
- Simple and easy to design with
- Requires only 5 external components
- Uses readily available standard inductors
- 3.3V, 5.0V, 12V, and adjustable output versions
- Adjustable version output voltage range: 1.21V to 37V
- $\pm 1.5\%$  max output voltage tolerance over line and load conditions
- Guaranteed 1A output load current
- 0.25 $\Omega$  DMOS Output Switch
- Wide input voltage range: 8V to 40V
- 260 kHz fixed frequency internal oscillator
- TTL shutdown capability, low power standby mode
- Soft-start and frequency synchronization
- Thermal shutdown and current limit protection

## Typical Applications

- Simple High Efficiency (>90%) Step-Down (Buck) Regulator
- Efficient Pre-Regulator for Linear Regulators

## Typical Application

(Fixed Output Voltage Versions)

**Absolute Maximum Ratings** (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	45V
ON/OFF Pin Voltage	$-0.1V \leq V_{SH} \leq 6V$
Switch Voltage to Ground	-1V
Boost Pin Voltage	$V_{SW} + 8V$
Feedback Pin Voltage	$-0.3V \leq V_{FB} \leq 14V$
ESD Susceptibility	
Human Body Model (Note 2)	2 kV
Power Dissipation	Internally Limited

Storage Temperature Range	-65°C to +150°C
Lead Temperature	
M Package	
Vapor Phase (60s)	+215°C
Infrared (15s)	+220°C
N Package (Soldering, 10s)	+260°C
LLP Package (see AN-1187)	
Maximum Junction Temperature	+150°C

**Operating Ratings**

Supply Voltage	6.5V to 40V
Temperature Range	$-40^{\circ}\text{C} \leq T_J \leq +125^{\circ}\text{C}$

**Electrical Characteristics**

**LM2672-3.3** Specifications with standard type face are for  $T_J = 25^{\circ}\text{C}$ , and those in **bold type face** apply over full Operating Temperature Range.

## All Output Voltage Versions

Specifications with standard type face are for  $T_J = 25^\circ\text{C}$ , and those in **bold type face** apply over **full Operating Temperature Range**. Unless otherwise specified,  $V_{IN} = 12\text{V}$  for the 3.3V, 5V, and Adjustable versions and  $V_{IN} = 24\text{V}$  for the 12V version, and  $I_{LOAD} = 100\text{ mA}$ .

Symbol	Parameters	Conditions	Typ	Min	Max	Units
<b>DEVICE PARAMETERS</b>						
$I_Q$	Quiescent Current	$V_{FEEDBACK} = 8\text{V}$ For 3.3V, 5.0V, and ADJ Versions	2.5		3.6	mA
		$V_{FEEDBACK} = 15\text{V}$ For 12V Versions	2.5			mA
$I_{STBY}$	Standby Quiescent Current	ON/OFF Pin = 0V	50		100/150	$\mu\text{A}$
$I_{CL}$	Current Limit		1.55	1.25/1.2	2.1/2.2	A
$I_L$	Output Leakage Current	$V_{IN} = 40\text{V}$ , ON/OFF Pin = 0V $V_{SWITCH} = 0\text{V}$	1		25	$\mu\text{A}$
		$V_{SWITCH} = -1\text{V}$ , ON/OFF Pin = 0V	6		15	mA
$R_{DS(ON)}$	Switch On-Resistance	$I_{SWITCH} = 1\text{A}$	0.25		0.30/0.50	$\Omega$
$f_O$	Oscillator Frequency	Measured at Switch Pin	260	225	275	kHz
D	Maximum Duty Cycle		95			%
	Minimum Duty Cycle		0			%
$I_{BIAS}$	Feedback Bias Current	$V_{FEEDBACK} = 1.3\text{V}$ ADJ Version Only	85			nA
$V_{S/D}$	ON/OFF Pin Voltage Thesholds		1.4	0.8	2.0	V
$I_{S/D}$	ON/OFF Pin Current	ON/OFF Pin = 0V	20	7	37	$\mu\text{A}$
$F_{SYNC}$	Synchronization Frequency	$V_{SYNC} = 3.5\text{V}$ , 50% duty cycle	400			kHz
$V_{SYNC}$	Synchronization Threshold Voltage		1.4			V
$V_{SS}$	Soft-Start Voltage		0.63	0.53	0.73	V
$I_{SS}$	Soft-Start Current		4.5	1.5	6.9	$\mu\text{A}$
$\theta_{JA}$	Thermal Resistance	N Package, Junction to Ambient (Note 6)	95			$^\circ\text{C/W}$
		M Package, Junction to Ambient (Note 6)	105			

**Note 1:** Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but device parameter specifications may not be guaranteed under these conditions. For guaranteed specifications and test conditions, see the Electrical Characteristics.

**Note 2:** The human body model is a 100 pF capacitor discharged through a 1.5 k $\Omega$  resistor into each pin.

**Note 3:** External components such as the catch diode, inductor, input and output capacitors, and voltage programming resistors can affect switching regulator performance. When the LM2672 is used as shown in *Figure 2* and *Figure 3* test circuits, system performance will be as specified by the system parameters section of the Electrical Characteristics.

**Note 4:** Typical numbers are at 25 $^\circ\text{C}$  and represent the most likely norm.

**Note 5:** All limits guaranteed at room temperature (standard type face) and at **temperature extremes (bold type face)**. All room temperature limits are 100% production tested. All limits at **temperature extremes** are guaranteed via correlation using standard Statistical Quality Control (SQC) methods. All limits are used to calculate Average Outgoing Quality Level (AOQL).

**Note 6:** Junction to ambient thermal resistance with approximately 1 square inch of printed circuit board copper surrounding the leads. Additional copper area will lower thermal resistance further. See Application Information section in the application note accompanying this datasheet and the thermal model in **LM267X Made Simple** version 6.0 software. The value  $\theta_{JA}$  for the LLP (LD) package is specifically dependent on PCB trace area, trace material, and the number of layers and thermal vias. For improved thermal resistance and power dissipation for the LLP package, refer to Application Note AN-1187.
