- Notes:

  1. Unless noted otherwise, all specifications apply over the operating temperature

  1. Unless noted otherwise, all specifications apply over the operating temperature

  1. The all field domonstration board with impedance range with filter soldered to the specified demonstration board with impedance matching to 50  $\Omega$  and measured with 50  $\Omega$  network analyzer.
- 2. Unless noted otherwise, all frequency specifications are referenced to the nominal center frequency, fc.
- Rejection is measured as attenuation below the minimum IL point in the passband. Rejection in final user application is dependent on PCB layout and
- external impedance matching design. See Application Note No. 42 for details. Part to part absolute delay measurement records the absolute delay mean
- across 1 dB passband.
- "LRIP" or "L" after the part number indicates "low rate initial production" and 5. "ENG" or "E" indicates "engineering prototypes."
- The design, manufacturing process, and specifications of this filter are subject to change.
- Either Port 1 or Port 2 may be used for either input or output in the design. However, impedances and impedance matching may vary between Port 1 and Port 2, so that the filter must always be installed in one direction per the circuit
- US and international patents may apply.
- Electrostatic Sensitive Device. Observe precautions for handling.
