

DESCRIPTION: piezo audio indicators

## SPECIFICATONS

| operating frequency     | 2.8 ± 0.5 KHz                     |                  |  |
|-------------------------|-----------------------------------|------------------|--|
| operating voltage range | 3~28 V DC                         |                  |  |
| current consumption     | 6 mA max.                         | at 12 V DC       |  |
| sound pressure level    | 81 db min.                        | at 30 cm/12 V DC |  |
| rated voltage           | 12 V DC                           |                  |  |
| tone                    | fast pulse (3.5Hz±2               | 20%)             |  |
| operating tempurature   | -30 ~ +85° C                      |                  |  |
| storage tempurature     | -40 ~ +95° C                      |                  |  |
| dimensions              | Ø41.8 x H16.0 mm                  |                  |  |
| weight                  | 14.6 g max.                       |                  |  |
| material                | ABS UL-94 1/16" high heat (black) |                  |  |
| terminal                | wire type                         |                  |  |
| RoHS                    | yes                               |                  |  |
|                         |                                   |                  |  |

## **APPEARANCE DRAWING**

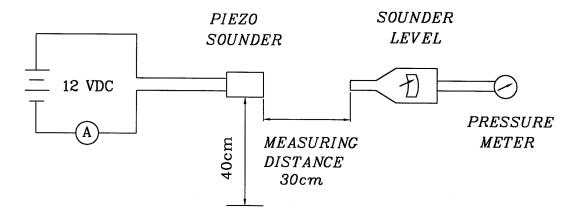

tolerance: ±0.5 units: mm

DESCRIPTION: piezo audio indicators

## MEASUREMENT METHOD

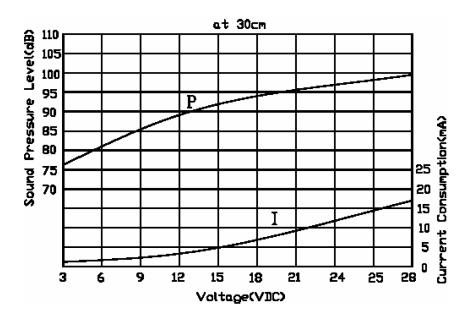

S.P.L. Measuring Circuit

Mic: RION S.P.L. meter UC30 or equivalent

S.G.: Hewlett Packard 33120A function gernerator or equivalent

# CURRENT CONSUMPTION/SOUND PRESSURE LEVEL

**DESCRIPTION:** piezo audio indicators

# **MECHANICAL CHARACTERISTICS**

| item                          | test condition                               |   | evaluation standard                 |
|-------------------------------|--|---|-------------------------------------|
| solderability                 | Stripped wires are                           | Stripped wires are immersed in rosin for      |                                     |
|                               | 5 seconds and the                            | 5 seconds and then immersed in solder bath    |                                     |
| of 270 ±5°C for 3 ±1 seconds. |  | ±1 seconds.                                   | (except the edge of the terminal).  |
| lead wire pull strength       | The pull force shal                          | The pull force shall be applied to lead wire: |                                     |
|                               | Horizontal                                   | 3.0N for 30 seconds                           | No damage or cutting off.           |
|                               | Vertical                                     | 2.0N for 30 seconds                           |                                     |
| vibration                     | The buzzer shall be measured after applying  |   | The value of oscillation            |
|                               | a vibration amplitude of 1.5 mm with 10 to   |   | frequency/current consumption       |
|                               | 55 Hz band of vibration frequency to each of |   | should be $\pm 10\%$ of the initial |
|                               | the 3 perpendicular directions for 2 hours.  |   | measurements. The SPL should        |
| drop test                     | The part will be dropped from a height of    |   | be within ±10dB compared with       |
|                               | 75 cm onto a 40 mm thick wooden board 3      |   | the initial measurement.            |
|                               | times in 3 axes (X                           | , Y, Z) for a total of 9 drops.               |                                     |

#### **ENVIRONMENT TEST**

| item             | test condition  | evaluation standard   |  |
|------------------|---|---|--|
| high temp. test  | After being placed in a chamber at +95°C for                        | _   |  |
|                  | 240 hours.  |   |  |
| low temp. test   | After being placed in a chamber at -40°C for                        |   |  |
|                  | 240 hours.  |   |  |
| humidity test    | After being placed in a chamber at +40°C and                        |   |  |
|                  | 90±5% relative humidity for 240 hours.                              |   |  |
| temp. cycle test | The part shall be subjected to 5 cycles. One cycle will consist of: | The buzzer will be measured after<br>being placed at +25°C for 4<br>hours. The value of the<br>oscillation frequency/current<br>consumption should be ±10%<br>compared to the initial<br>measurements. The SPL should |  |
|                  | -40°C<br>0.5hr 0.5hr 0.25 0.5hr 0.5hr 0.5hr 0.25                    | be within ±10dB compared to the initial measurements.   |  |
|                  |   |   |  |
|                  | 3hours  |   |  |
|                  | ۲ <u>۲</u>  |   |  |

**DESCRIPTION:** piezo audio indicators

## **RELIABILITY TEST**

| item                  | test condition                                     | evaluation standard               |
|-----------------------|--|-----------------------------------|
| operating (life test) | 1. Continuous life test:                           | The buzzer will be measured after |
|                       | The part will be subjected to 48 hours of          | being placed at +25°C for 4       |
|                       | continuous operation at +70°C with rated           | hours. The value of the           |
|                       | voltage applied.                                   | oscillation frequency/current     |
|                       |  | consumption should be ±10%        |
|                       | 2. Intermittent life test:                         | compared to the initial           |
|                       | A duty cycle of 1 minute on, 1 minutes off, a      | measurements. The SPL should      |
|                       | minimum of 5,000 times at room temp                | be within ±10dB compared to       |
|                       | $(+25 \pm 2^{\circ}C)$ with rated voltage applied. | the initial measurements.         |

# **TEST CONDITIONS**

| standard test condition  | a) tempurature: +5 ~ +35°C | b) humidity: 45 - 85% | c) pressure: 860-1060 mbar |
|--------------------------|----------------------------|-----------------------|----------------------------|
| judgement test condition | a) tempurature: +25 ±2°C   | b) humidity: 60 - 70% | c) pressure: 860-1060 mbar |

DESCRIPTION: piezo audio indicators
