# **Dual Supply ECL to TTL**1:8 Clock Driver

#### Description

The MC10H/100H643 is a dual supply, low skew translating 1:8 clock driver. Devices in the ON Semiconductor H643 translator series utilize the PLCC-28 for optimal power pinning, signal flow through and electrical performance. The dual-supply H643 is similar to the H641, which is a single-supply 1:9 version of the same function.

The device features a 48 mA TTL output stage, with AC performance specified into a 50 pF load capacitance. A Latch is provided on-chip. When LEN is LOW (or left open, in which case it is pulled LOW by the internal pulldowns) the latch is transparent. A HIGH on the enable pin (EN) forces all outputs LOW.

The 10H version is compatible with MECL 10H™ ECL logic levels. The 100H version is compatible with 100K levels.

#### **Features**

- ECL/TTL Version of Popular ECLinPS<sup>™</sup> E111
- Low Skew Within Device 0.5 ns
- Guaranteed Skew Spec Part-to-Part 1.0 ns
- Latch
- · Differential Internal Design
- V<sub>BB</sub> Output
- Dual Supply
- Reset/Enable
- Multiple TTL and ECL Power/Ground Pins
- Pb-Free Packages are Available\*

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.
