

## Features

- All outputs skew < 100 ps typical (250 max)
- 15 to 80 MHz output operation
- Zero input to output delay
- 50% duty cycle outputs
- Outputs drive 50  $\Omega$  terminated lines
- Low operating current
- 24-pin small-outline integrated circuit (SOIC) package
- Jitter: < 200 ps peak-to-peak, < 25 ps RMS

## Functional Description

The CY7B9910 and CY7B9920 low skew clock buffers offer low skew system clock distribution. These multiple output clock drivers optimize the timing of high performance computer systems. Each of the eight individual drivers can drive terminated transmission lines with impedances as low as 50  $\Omega$ . They deliver minimal and specified output skews and full swing logic levels (CY7B9910 TTL or CY7B9920 CMOS).

The completely integrated PLL enables 'zero delay' capability. External divide capability, combined with the internal PLL, allows distribution of a low frequency clock that is multiplied by virtually any factor at the clock destination. This facility minimizes clock distribution difficulty while allowing maximum system clock speed and flexibility.

## Block Diagram Description

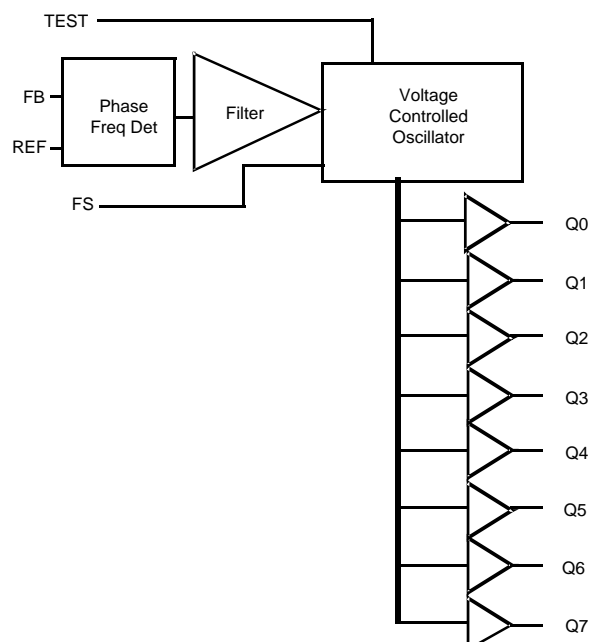

### Phase Frequency Detector and Filter

The phase frequency detector and Filter blocks accept inputs from the reference frequency (REF) input and the feedback (FB) input and generate correction information to control the frequency of the voltage controlled oscillator (VCO). These blocks, along with the VCO, form a phase-locked loop (PLL) that tracks the incoming REF signal.

### VCO

The VCO accepts analog control inputs from the PLL filter block and generates a frequency. The operational range of the VCO is determined by the FS control pin.

## Pinouts

Figure 1. Pin Configuration – 24-pin (300-Mil) Molded SOIC

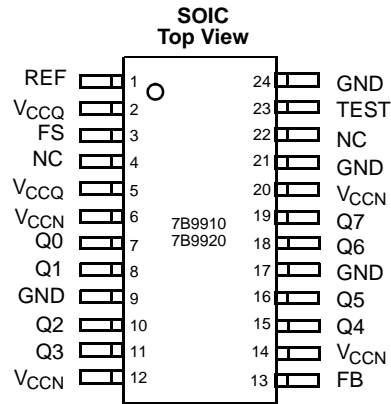

Table 1. Pin Definition

Signal Name	IO	Description
REF <sup>[1]</sup>	I	Reference frequency input. This input supplies the frequency and timing against which all functional variations are measured.
FB	I	PLL feedback input (typically connected to one of the eight outputs).
FS <sup>[1, 2, 3]</sup>	I	Three level frequency range select. The ranges are described in the switching characteristics tables.
TEST	I	Three level select. See <a href="#">TEST MODE</a> .
Q[0..7]	O	Clock outputs.
NC	NC	No connect.
VCCN	PWR	Power supply for output drivers.
VCCQ	PWR	Power supply for internal circuitry.
GND	PWR	Ground.

## Test Mode

The TEST input is a three level input. In normal system operation, this pin is connected to ground, allowing the CY7B9910 and CY7B9920 to operate as described in [Block Diagram Description on page 1](#). For testing purposes, any of the three level inputs can have a removable jumper to ground or be tied LOW through a 100  $\Omega$  resistor. This enables an external tester to change the state of these pins.

If the TEST input is forced to its MID or HIGH state, the device operates with its internal phase locked loop disconnected and input levels supplied to REF directly control all outputs. Relative output-to-output functions are the same as in normal mode.

### Notes

- When the FS pin is selected HIGH, the REF input must not transition upon power up until  $V_{CC}$  reached 4.3 V.
- The level to be set on FS is determined by the "normal" operating frequency ( $f_{NOM}$ ) of the VCO (see [Logic Block Diagram](#)). The frequency appearing at the REF and FB inputs are  $f_{NOM}$  when the output connected to FB is undivided. The frequency of the REF and FB inputs are  $f_{NOM} / X$  when the device is configured for a frequency multiplication by using external division in the feedback path of value X.
- For all three state inputs, HIGH indicates a connection to  $V_{CC}$ , LOW indicates a connection to GND, and MID indicates an open connection. Internal termination circuitry holds an unconnected input to  $V_{CC} / 2$ .

## Maximum Ratings

Exceeding maximum ratings may shorten the useful life of the device. User guidelines are not tested.

Storage temperature ..... -65 °C to +150 °C

Ambient temperature with power applied ..... -55 °C to +125 °C

Supply voltage to ground potential ..... -0.5 V to +7.0 V

DC input voltage ..... -0.5 V to +7.0 V

Output current into outputs (LOW) ..... 64 mA

Static discharge voltage ..... > 2001 V (MIL-STD-883, method 3015)

Latch-up current ..... > 200 mA

## Operating Range

Range	Ambient Temperature	V <sub>CC</sub>
Commercial	0 °C to +70 °C	5 V ± 10%
Industrial	-40 °C to +85 °C	5 V ± 10%

## Electrical Characteristics

Over the Operating Range

Parameter	Description	Test Conditions	CY7B9910		CY7B9920		Unit
			Min	Max	Min	Max

		V <sub>CC</sub> = Min, I <sub>OH</sub> = -40 mA	-	-	V <sub>CC</sub> - 0.75	-	
V <sub>OL</sub>	Output LOW voltage	V <sub>CC</sub> = Min, I <sub>OL</sub> = 46 mA	-	0.45	-	-	V
		V <sub>CC</sub> = Min, I <sub>OL</sub> = 46 mA	-	-	-	0.45	
V <sub>IH</sub>	Input HIGH voltage (REF and FB inputs only)		2.0	V <sub>CC</sub>	V <sub>CC</sub> - 1.35	V <sub>CC</sub>	V
V <sub>IL</sub>	Input LOW voltage (REF and FB inputs only)		-0.5	0.8	-0.5	1.35	V
V <sub>IHH</sub>	Three level input HIGH voltage (Test, FS) <sup>[4]</sup>	Min ≤ V <sub>CC</sub> ≤ Max	V <sub>CC</sub> - 1 V	V <sub>CC</sub>	V <sub>CC</sub> - 1 V	V <sub>CC</sub>	V
V <sub>IMM</sub>	Three level input MID voltage (Test, FS) <sup>[4]</sup>	Min ≤ V <sub>CC</sub> ≤ Max	V <sub>CC</sub> /2 - 500 mV	V <sub>CC</sub> /2 + 500 mV	V <sub>CC</sub> /2 - 500 mV	V <sub>CC</sub> /2 + 500 mV	V
V <sub>ILL</sub>	Three level input LOW voltage (Test, FS) <sup>[4]</sup>	Min ≤ V <sub>CC</sub> ≤ Max	0.0	1.0	0.0	1.0	V
I <sub>IH</sub>	Input HIGH leakage current (REF and FB inputs only)	V <sub>CC</sub> = Max, V <sub>IN</sub> = Max	-	10	-	10	μA
I <sub>IL</sub>	Input LOW leakage current (REF and FB inputs only)	V <sub>CC</sub> = Max, V <sub>IN</sub> = 0.4 V	-500	-	-500	-	μA
I <sub>IHH</sub>	Input HIGH current (Test, FS)	V <sub>IN</sub> = V <sub>CC</sub>	-	200	-	200	μA
I <sub>IMM</sub>	Input MID current (Test, FS)	V <sub>IN</sub> = V <sub>CC</sub> / 2	-50	50	-50	50	μA
I <sub>ILL</sub>	Input LOW current (Test, FS)	V <sub>IN</sub> = GND	-	-200	-	-200	μA
I <sub>OS</sub>	Output short circuit current <sup>[5]</sup>	V <sub>CC</sub> = Max, V <sub>OUT</sub> = GND (25 °C only)	-	-250	-	N/A	mA

### Notes

- These inputs are normally wired to V<sub>CC</sub>, GND, or left unconnected (actual threshold voltages vary as a percentage of V<sub>CC</sub>). Internal termination resistors hold unconnected inputs at V<sub>CC</sub>/2. If these inputs are switched, the function and timing of the outputs may glitch and the PLL may require an additional t<sub>LOCK</sub> time before all datasheet limits are achieved.
- Tested one output at a time, output shorted for less than one second, less than 10% duty cycle. Room temperature only. CY7B9920 outputs are not short circuit protected.

## Electrical Characteristics

Over the Operating Range (continued)

Parameter	Description	Test Conditions	CY7B9910		CY7B9920		Unit

**TTL Input Test Waveform (CY7B9910)**

**CMOS AC Test Load (CY7B9920)**

**CMOS Input Test Waveform (CY7B9920)**

### Notes

- Total output current per output pair is approximated by the following expression that includes device current plus load current:  
 CY7B9910:  

$$I_{CCN} = [(4 + 0.11 F) + [(835 - 3 F) / Z] + (.0022 FC)] N \times 1.1$$
  
 CY7B9920:  

$$I_{CCN} = [(3.5 + .17 F) + [(1160 - 2.8 F) / Z] + (.0025 FC)] N \times 1.1$$
  
 Where  
 F = frequency in MHz  
 C = capacitive load in pF  
 Z = line impedance in ohms  
 N = number of loaded outputs; 0, 1, or 2  
 FC = F < C.
- Total power dissipation per output pair is approximated by the following expression that includes device power dissipation plus power dissipation due to the load circuit:  
 CY7B9910:  

$$PD = [(22 + 0.61 F) + [(1550 - 2.7 F) / Z] + (.0125 FC)] N \times 1.1$$
  
 CY7B9920:  

$$PD = [(19.25 + 0.94 F) + [(700 + 6 F) / Z] + (.017 FC)] N \times 1.1.$$
 See note 3 for variable definition.
- CMOS output buffer current and power dissipation specified at 50 MHz reference frequency.
- Applies to REF and FB inputs only.

## Switching Characteristics

t <sub>JR</sub>	Cycle-to-cycle output jitter	Peak-to-peak <sup>[17]</sup>	–	–	200	–	–	200	ps
		RMS <sup>[17]</sup>	–	–	25	–	–	25	ps

### Notes

10. Test measurement levels for the CY7B9910 are TTL levels (1.5 V to 1.5 V). Test measurement levels for the CY7B9920 are CMOS levels ( $V_{CC} / 2$  to  $V_{CC} / 2$ ). Test conditions assume signal transition times of 2 ns or less and output loading as shown in the AC Test Loads and Waveforms unless otherwise specified.
11. For all three state inputs, HIGH indicates a connection to  $V_{CC}$ , LOW indicates a connection to GND, and MID indicates an open connection. Internal termination circuitry holds an unconnected input to  $V_{CC} / 2$ .
12. The level to be set on FS is determined by the "normal" operating frequency ( $f_{NOM}$ ) of the VCO (see [Logic Block Diagram](#)). The frequency appearing at the REF and FB inputs are  $f_{NOM}$  when the output connected to FB is undivided. The frequency of the REF and FB inputs are  $f_{NOM} / X$  when the device is configured for a frequency multiplication by using external division in the feedback path of value X.
13. When the FS pin is selected HIGH, the REF input must not transition upon power up until  $V_{CC}$  reached 4.3 V.
14. Except as noted, all CY7B9920-2 and -5 timing parameters are specified to 80 MHz with a 30 pF load.
15. t<sub>SKEW</sub> is defined as the time between the earliest and the latest output transition among all outputs when all are loaded with 50 pF and terminated with 50 Ω to 2.06 V (CY7B9910) or  $V_{CC} / 2$  (CY7B9920).
16. t<sub>SKEW</sub> is defined as the skew between outputs.
17. Guaranteed by statistical correlation. Tested initially and after any design or process changes that may affect these parameters.
18. t<sub>DEV</sub> is the output-to-output skew between any two outputs on separate devices operating under the same conditions ( $V_{CC}$ , ambient temperature, air flow, and so on).
19. t<sub>ODCV</sub> is the deviation of the output from a 50% duty cycle.
20. Specified with outputs loaded with 30 pF for the CY7B99X0-2 and -5 devices and 50 pF for the CY7B99X0-7 devices. Devices are terminated through 50 Ω to 2.06 V (CY7B9910) or  $V_{CC} / 2$  (CY7B9920).
21. t<sub>ORISE</sub> and t<sub>OFALL</sub> measured between 0.8 V and 2.0 V for the CY7B9910 or 0.8  $V_{CC}$  and 0.2  $V_{CC}$  for the CY7B9920.
22. t<sub>LOCK</sub> is the time that is required before synchronization is achieved. This specification is valid only after  $V_{CC}$  is stable and within normal operating limits. This parameter is measured from the application of a new signal or frequency at REF or FB until t<sub>PD</sub> is within specified limits.

## AC Timing Diagrams

Figure 3. AC Timing Diagrams

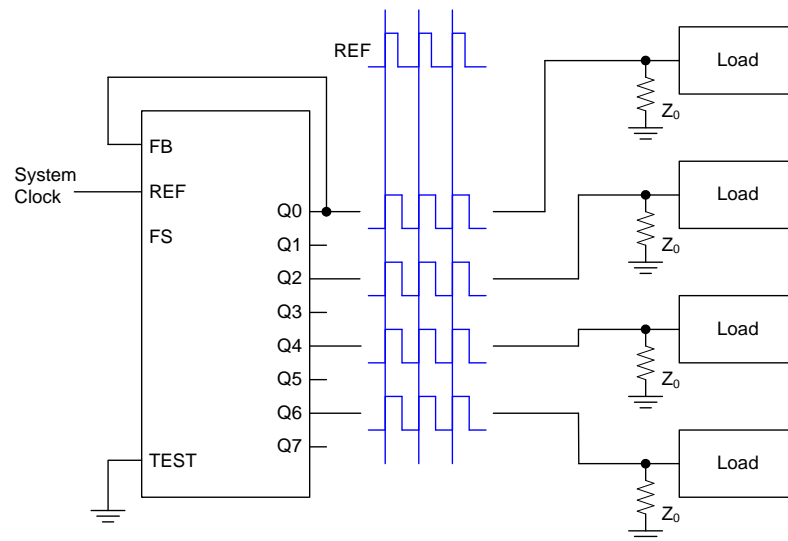

Figure 4. Zero Skew and Zero Delay Clock Driver

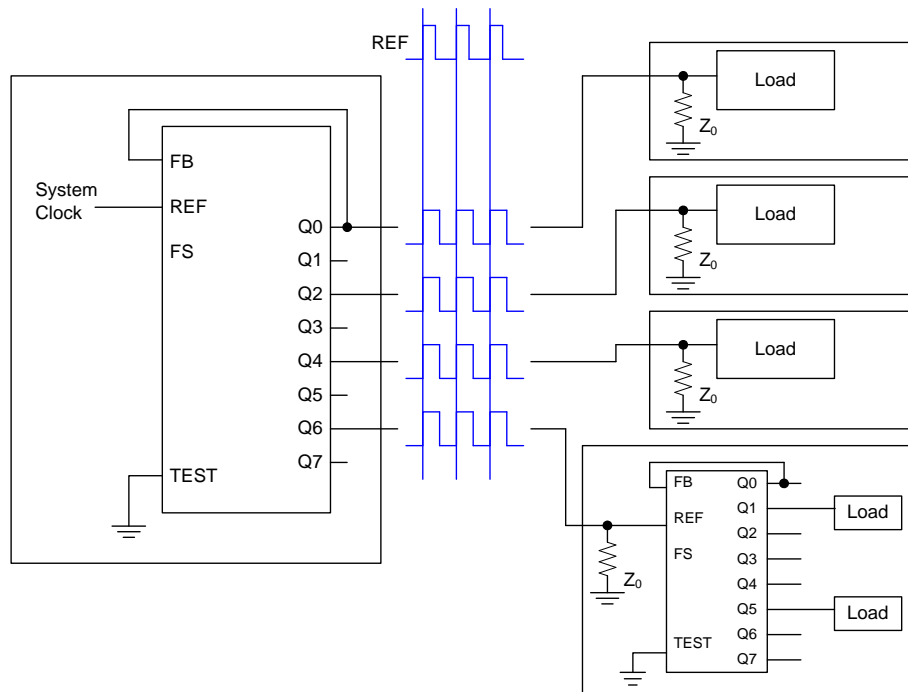

## Operational Mode Descriptions

Figure 4 on page 7 shows the device configured as a zero skew clock buffer. In this mode the CY7B9910/CY7B9920 is used as the basis for a low skew clock distribution tree. The outputs are aligned and may each drive a terminated transmission line to an independent load. The FB input is tied to any output and the operating frequency range is selected with the FS pin. The low skew specification, coupled with the ability to drive terminated

transmission lines (with impedances as low as 50 ohms), enables efficient printed circuit board design.

Figure 3 on page 7 shows the CY7B9910/CY7B9920 connected in series to construct a zero skew clock distribution tree between boards. Cascaded clock buffers accumulates low frequency jitter because of the non-ideal filtering characteristics of the PLL filter. Do not connect more than two clock buffers in series.

**Figure 5. Board-to-Board Clock Distribution**

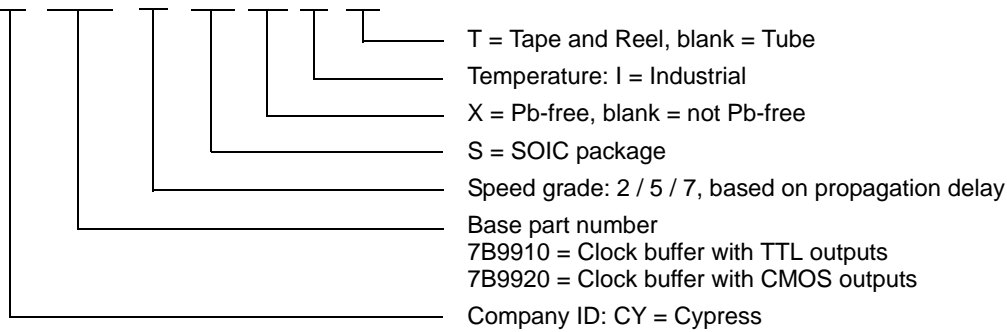

### Ordering Information

Accuracy (ps)	Ordering Code	Package Type	Operating Range
500	CY7B9920-5S <sup>[23]</sup>	24-Pin Small Outline IC	Industrial, -40 °C to +85 °C
<b>Pb-free</b>			
500	CY7B9910-5SXI	24-Pin Small Outline IC	Industrial, -40 °C to +85 °C
	CY7B9910-5SXIT	24-Pin Small Outline IC - Tape and Reel	Industrial, -40 °C to +85 °C

### Ordering Code Definition

CY 7B99X0 - X S (X) C (T)

**Note**

23. Not recommended for new design. New designs should use Pb-free devices.
