

## 8-CHANNEL HIGH DEFINITION AUDIO CODEC

92HD202

### DESCRIPTION

The 92HD202 is a high fidelity, 8-channel audio CODEC compatible with Intel's High Definition (HD) Audio Interface. The 92HD202 CODEC provides stereo 24-bit resolution with sample rates up to 192 KHz. SPDIF I/O provides connectivity to consumer electronic equipment. The 92HD202 CODEC incorporates IDT's proprietary  $\Sigma\Delta$  technology to achieve an estimated DAC SNR in excess of 95dB. The 92HD202 CODEC provides high quality HD Audio capability to notebook and media centric desktop PC applications.

### FEATURES

- High performance HD Audio CODEC provides Theater Quality Audio
- Targeted for designs meeting Premium Windows Logo Program
- High performance  $\Sigma\Delta$  technology
  - 95dB DAC SNR
- Intel HD Audio interface
- Eight Channel (4 DAC pairs and 2 stereo ADCs) with 24-bit resolution
- Sample Rates Up to 192 KHz
- Integrated Headphone Amps
- Stereo Microphone
  - Supports Stereo Microphone
  - Microphone Boost 0, 10, 20, 30, 40dB
- Direct CDROM Recording Mixerless Design
- SPDIF In and Out
- Two-Pin Volume Up/Down Control
- Impedance Sensing

- **Universal Jacks™ Functionality for Jack Retasking**

- Headphone, Line Out, Line In and Microphone Support
  - Pins 35/36
  - Pins 39/41
- Line Out, Line In and Microphone Support
  - Pins 16/17 (with strong line out)
  - Pins 23/24
  - Pins 21/22
- Line In and Microphone Support
  - Pins 14/15

- **Four Adjustable VREF Out pins for Microphone Bias**

- **Digital PC Beep to all outputs**
- **+5 V Analog Power Supply**
- **48-pin LQFP package (7mm x 7mm)**

### THIRD PARTY SOFTWARE SUPPORT

- **WOW™ and Tru Surround™ from SRS**
- **Intellisonic Microphone Beam Forming from Knowles™**
- **Maxx BASS™ from Waves**
- **Dolby PC Audio Logo Program**
  - Program Levels
    - Dolby Sound Room™
    - Dolby Home Theater™
  - Dolby Technologies
    - Dolby Headphone™
    - Dolby ProLogic II™
    - Dolby Virtual Speaker™
- **Smart Stream™ from Sonic Focus**

## 1. DESCRIPTION

### 1.1. Overview

The 92HD202 is a high fidelity, 8-channel audio CODEC compatible with Intel's High Definition (HD) Audio Interface. The 92HD202 CODEC provides stereo, 24-bit resolution, with sample rates up to 192 KHz. SPDIF I/O provides connectivity to consumer electronic equipment. The 92HD202 CODEC incorporates IDT's proprietary  $\Sigma\Delta$  technology to achieve an estimated DAC SNR in excess of 95dB. The 92HD202 CODEC provides high quality HD Audio capability to notebook and media centric desktop PC applications.

### 1.2. Features List

- High performance HD Audio CODEC provides Theater Quality Audio
- Targeted for designs meeting Premium Windows Logo Program
- High performance  $\Sigma\Delta$  technology
  - 95dB DAC SNR
- Intel HD Audio interface
- Eight Channel (4 DAC pairs and 2 stereo ADCs) with 24-bit resolution
- Sample Rates Up to 192 KHz
- Integrated Headphone Amps
- Stereo Microphone
  - Supports Stereo Microphone
  - Microphone Boost 0, 10, 20, 30, 40dB
- Direct CDROM Recording Mixerless Design
- SPDIF In and Out
- Two-Pin Volume Up/Down Control
- Impedance Sensing
- Universal Jacks™ Functionality for jack retasking
  - Headphone, Line Out, Line In and Microphone Support
    - Pins 35/36
    - Pins 39/41
  - Line Out, Line In and Microphone Support
    - Pins 16/17 (with strong line out)
    - Pins 23/24
    - Pins 21/22
  - Line In and Microphone Support
    - Pins 14/15
- Four Adjustable VREF Out pins for Microphone Bias
- Digital PC Beep to all outputs
- +5 V Analog Power Supply
- 48-pin LQFP package option (7mm x 7mm)

### 1.3. Third Party Software Support

- WOW™ and Tru Surround™ from SRS
- Intellisonic Microphone Beam Forming from Knowles™
- Maxx BASS™ from Waves
- Dolby PC Audio Logo Program\*
  - Program Levels
    - Dolby Sound Room™
    - Dolby Home Theater™
  - Dolby Technologies
    - Dolby Headphone™
    - Dolby ProLogic II™
    - Dolby Virtual Speaker™
- Smart Stream™ from Sonic Focus

*Note: \* System manufacturers must obtain system license from Dolby.*

### 1.4. Detailed Description

The 92HD202 is a high fidelity, 8-channel audio CODEC compatible with the Intel High Definition (HD) Audio Interface. The 92HD202 provides high quality, HD Audio capability to notebook and cost sensitive desktop PC applications.

The 92HD202 incorporates IDT's proprietary  $\Sigma\Delta$  technology to achieve a DAC SNR of up to 95 dB. The higher performance and quality of IDT's audio solutions brings consumer electronics level performance to the notebook, desktop and media center PC.

The 92HD202 provide stereo 24-bit, full duplex resolution supporting sample rates up to 192 KHz by the DAC and ADC. The 92HD202 DAC, ADC and SPDIF In/Out support sample rates of 96 KHz, 48 KHz and 44.1 KHz. Additional sample rates are supported by the driver software.

The 92HD202 supports all desired eight channel configurations, including switchable Headphone Out, and Universal Jacks functionality for jack detection and re-tasking. The SPDIF interface provides connectivity to Consumer Electronic equipment, such as Dolby Digital decoders, powered speakers, mini disk drives or to a home entertainment system. All analog I/O pairs support LINE\_IN, LINE\_OUT and MIC.

Microphone inputs can be programmed with 0/10/20/30/40dB boost. For more advanced configurations, the 92HD202 has up to four General Purpose I/O (GPIO) pins. The 92HD202 also provides a single ended CD input for compatibility with Digital Rights Management (DRM) solutions and to support legacy OS issues.

The 92HD202 integrates a headphone amplifier which is available on Ports A and D. The headphone amplifier is switchable between these two outputs for increased flexibility, enhanced user experience, and reduced implementation costs. An additional, lower power, headphone supports Port F.

The Universal Jack capabilities allow the CODEC to detect when audio devices are connected, and allow the CODEC to be reconfigured to support these devices regardless of which port they are

plugged into. SPDIF input sensing is also supported. The fully parametric IDT SoftEQ can be initiated upon headphone jack insertion and removal for protection of notebook speakers.

*Note: The Jack Detect circuit component selection are critical for accurate detection of audio jacks on individual ports. Please see the 92HD202 reference design for circuit implementation details.*

The 92HD202 operates with a 3.3 V digital supply 5 V analog supply.

The 92HD202 is available in a 48-pin LQFP package. The 48-pin LQFP is only available in the Environmental package (Pb-free).

The 92HD202 is supported with IDT's high quality software solutions which include drivers for all major Windows operating systems from Microsoft, parametric SoftEQ, and Digital Rights Management. Third party plug-in capability is easily achieved with the IDT Kernel Processing Interface (SKPI), to support high-valued, third party technologies such as SRS WOW®, Knowles® Microphone Beam Forming, Waves MaxxBASS®, Dolby Headphone®, Dolby ProLogic II® and Dolby Virtual Speaker® and more.

Non-IDT companies mentioned are registered trademarks of their respective companies.

## 2. CHARACTERISTICS

### 2.1. Audio Fidelity

DAC SNR:	95dB	A-Weighted	5.0 V +/- 5%
ADC SNR:	90dB	A-Weighted	5.0 V +/- 5%

### 2.2. Electrical Specifications

#### 2.2.1. Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the 92HD202. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Item	Pin	Maximum Rating
Analog maximum supply voltage	AVdd	6 Volts
Digital maximum supply voltage	DVdd	5.5 Volts
VREFOUT output current		5 mA
Voltage on any pin relative to ground		Vss - 0.3 V to Vdd + 0.3 V
Operating temperature		0 °C to +70 °C
Storage temperature		-55 °C to +125 °C
Soldering temperature		260 °C for 10 seconds. Soldering temperature information for all available packages begins on page 165.

#### 2.2.2. Recommended Operation Conditions

Parameter		Min.	Typ.	Max.	Units
Power Supply Voltage	Digital - 3.3 V	3.135	3.3	3.465	V
	Analog - 5 V	4.75	5	5.25	V
Ambient Operating Temperature		0		+70	°C
Case Temperature	T <sub>case</sub> (48-LQFP)			+90	°C

**ESD:** The 92HD202 is an ESD (electrostatic discharge) sensitive device. The human body and test equipment can accumulate and discharge electrostatic charges up to 4000 Volts without detection. Even though the 92HD202 implements internal ESD protection circuitry, proper ESD precautions should be followed to avoid damaging the functionality or performance.

### 2.3. 92HD202/92HD202D 5 V Analog Performance Characteristics

( $T_{\text{ambient}} = 25^{\circ}\text{C}$ ,  $\text{AVdd} = 5.0 \text{ V} \pm 5\%$ ,  $\text{DVdd} = 3.3 \text{ V} \pm 5\%$ ,  $\text{AVss} = \text{DVss} = 0 \text{ V}$ ; 1 KHz input sine wave; Sample Frequency = 48 KHz; 0dB = 1 VRMS, 10 KΩ / 50 pF load, Testbench Characterization BW: 20 Hz – 20 KHz, 0dB settings on all gain stages)

Min and Max performance targets are not included here, as specific system characteristics, such as layout, routing and external CODEC component selection, influence the performance of the CODEC. To receive min/max levels for your system, please send us a unit and IDT will perform a full audio test suite and provide you with the results. Contact IDT for more information.

Parameter	Min.	Typ.	Max.	Unit
<b>Full Scale Input Voltage:</b>				
All Analog Inputs with out boost	-	1.00	-	Vrms
All Analog Inputs with boost (Note 1)	-	0.03	-	Vrms
<b>Full Scale Output:</b>				
PCM (DAC) to All Analog Outputs	-	1.00	-	Vrms
HEADPHONE_OUT (32 Ω load) per channel (peak)	-	50	-	mW
<b>Dynamic Range: -60dB Signal Level:</b> (Note 2)				
PCM to All Analog Outputs	-	95	-	dB
All Analog Inputs to A/D (1 Vrms Input Referenced)	-	90	-	dB
Analog Frequency Response (Note 3)	10		30,000	Hz
<b>Total Harmonic Distortion + Noise (-3dB):</b> (Note 4)				
PCM to All Analog Outputs	-	-88	-	dB
All Analog Inputs to A/D (-3dBV input Level)	-	-88	-	dB
HEADPHONE_OUT (32 Ω load)	-	-85	-	dB
HEADPHONE_OUT (10 KΩ load)	-	-90	-	dB
<b>SNR (idle channel):</b> (Note 5)				
DAC to All Analog Outputs	-	95	-	dB
All Analog Inputs to A/D with High Pass Filter enabled	-	90	-	dB
A/D & D/A Digital Filter Pass Band (Note 6)	20	-	19,200	Hz
A/D & D/A Digital Filter Transition Band	19,200	-	28,800	Hz
A/D & D/A Digital Filter Stop Band	28,800	-	-	Hz
A/D & D/A Digital Filter Stop Band Rejcn (Note 7)	-100	-	-	dB
DAC Out-of-Band Rejection (Note 8)	-55	-	-	dB
Group Delay (48 KHz sample rate)	-	-	1	ms
Power Supply Rejection Ratio (1 KHz)	-	-70	-	dB
Power Supply Rejection Ratio (20 KHz)	-	-40	-	dB
Any Analog Input to DAC (1 KHz Signal Frequency) Crosstalk		-101		dB

Parameter	Min.	Typ.	Max.	Unit
Any Analog Input to ADC (10 KHz Signal Frequency) Crosstalk	-	-85	-	dB
Any Analog Input to ADC (1 KHz Signal Frequency) Crosstalk	-	-80	-	dB
Spurious Tone Rejection	-	-100	-	dB
Attenuation, Gain Step Size ANALOG	-	1.5	-	dB
Attenuation, Gain Step Size DIGITAL	-	0.75	-	dB
Input Impedance	-	50	-	KΩ
Input Capacitance	-	15	-	pF
VREFout	-	0.5 X AVdd	-	V
VREF	-	0.45 X AVdd	0.5	V
Interchannel Gain Mismatch ADC	-	-	0.5	dB
Interchannel Gain Mismatch DAC	-	-	-	dB
Gain Drift	-	100	-	ppm/°C
DAC Offset Voltage	-	5	20	mV
Deviation from Linear Phase	-	10	1	deg.
All Analog Outputs Load Resistance	-	10	-	KΩ
All Analog Outputs Load Capacitance	-	-	50	pF
HEADPHONE_OUT Load Resistance	-	32	-	W
HEADPHONE_OUT Load Capacitance	-	100	-	pF
Mute Attenuation	-	-	-	dB
PLL lock time	-	96	200	μsec
PLL (or HD Audio Bit CLK) 24.576 MHz clock jitter	-	100	300	psec

- With +30 dB Boost on, 1.00 Vrms with Boost off.
- Ratio of Full Scale signal to noise output with -60dB signal, measured "A weighted" over a 20 Hz to a 20 KHz bandwidth.
- ± 1dB limits for Line Output & 0 dB gain, at -20dBV
- Amplitude of THD+N, measured with A-weighting filter, over 20 Hz to 20 KHz bandwidth.
- Ratio of Full Scale signal to idle channel noise output is measured "A weighted" over a 20 Hz to a 20 KHz bandwidth. (AES17-1991 Idle Channel Noise or EIAJ CP-307 Signal-to-noise Ratio).
- Peak-to-Peak Ripple over Passband meets ± 0.25dB limits, 48 KHz Sample Frequency.
- Stop Band rejection determines filter requirements. Out-of-Band rejection determines audible noise.
- The integrated Out-of-Band noise generated by the DAC process, during normal PCM audio playback, over a bandwidth 28.8 to 100 KHz, with respect to a 1 Vrms DAC output.

## 2.4. Power Consumption

### 2.4.1. Digital: DVdd = 3.3 V

Table 1. Digital Power Consumption - DVdd = 3.3 V

Power State	Typical*	Max.	Units
D0	66	75	mA
D1	66	75	mA
D2	18	30	mA
D3	10	20	mA

### 2.4.2. Analog: AVdd = 5 V

Table 2. Analog Power Consumption - AVdd = 5 V

Power State	Typical*	Max.	Units
D0	55	65	mA
D1	55	65	mA
D2	25	35	mA
D3	15	20	mA

\*Typical results are with all DACs and all ADCs on, and with audio playing.

### 3. DETAILED DESCRIPTION

#### 3.1. Audio Jack Presence Detect

SENSE\_A pin is used to detect the presence of plugs in ports A, B, C, and D. SENSE\_B pin is used to detect the presence of plugs in ports E and F. Refer to the 92HD202 reference design for port detect circuitry.

#### 3.2. Universal Jacks

There are 6 ports on the 92HD202:

- Port A: pins 39 & 41
- Port B: pins 21 & 22
- Port C: pins 23 & 24
- Port D: pins 35 & 36
- Port E: pins 14 & 15
- Port F: pins 16 & 17

IDT's Universal Jacks technology allows for the greatest flexibility in board design and implementation. For the 92HD202 the Universal Jacks capabilities are as follows:<sup>1</sup>

- Port A (pins 39 & 41) can be used for<sup>2</sup>:
  - Headphone Out
  - Line Out
  - Line In
  - Mic with 0/10/20/30/40 dB Mic boost<sup>3</sup>
- Port D (pins 35 & 36) can be used for<sup>2</sup>:
  - Headphone Out
  - Line Out
  - Line In
  - Mic with 0/10/20/30/40 dB Mic boost<sup>3</sup>
- Port C (pins 23 & 24) can be used for:
  - Line Out
  - Line In
  - Mic with 0/10/20/30/40 dB Mic boost<sup>3</sup>
- Port B (pins 21 & 22) can be used for:
  - Line Out
  - Line In
  - Mic with 0/10/20/30/40 dB Mic boost<sup>3</sup>
- Port F (pins 16 & 17) can be used for<sup>2</sup>:
  - Headphone Out
  - Line Out
  - Line In

- Mic with 0/10/20/30/40 dB Mic boost<sup>3</sup>
- Port E (pins 14 & 15) can be used for:
  - Line In
  - Mic with 0/10/20/30/40 dB Mic boost<sup>3</sup>

*Note<sup>1</sup>: On the 92HD202, only one function can be selected on each pin pair at a time. For example, a pin pair cannot be configured as an input and output at the same time. Configuration can be changed at any time.*

*Note<sup>2</sup>: Headphone capabilities are provided on ports A, D and F. Do NOT put headphone loads on more than one port at a time. Port F (pins 16 & 17) can drive 32 ohm headphones, but is designed to provide less power than the headphone amplifiers on ports A (pins 39 & 41) and D (pins 35 & 36).*

*Note<sup>3</sup>: 40dB Microphone boost is not recommended.*

### 3.3. SPDIF Input

SPDIF IN can operate at 44.1 KHz, 48 KHz or 96 KHz, and implements internal Jack Sensing.

A sophisticated digital PLL allows automatic rate detection and accurate data recovery. The ability to directly accept consumer SPDIF voltage levels eliminates the need for costly external receiver ICs. Advanced features such as record slot select and SPDIF\_IN routing to the DAC allows for simultaneous record and play.

### 3.4. SPdif Output

SPDIF Output can operate at 44.1 KHz, 48 KHz, and 96 KHz as defined in the Intel High Definition Audio Specification with resolutions up to 24 bits. This insures compatibility with all consumer audio gear and allows for convenient integration into home theater systems and media center PCs.

[15:12]	Rsvd2	R	0x0	Reserved
[11:8]	InputDelay	R	0xD	Typical latency = 13 frames. Number of samples between when the sample is received as an analog signal at the pin and when the digital representation is transmitted on the HD Audio link.
[7:4]	Rsvd1	R	0x0	Reserved
[3:0]	OutputDelay	R	0xD	Typical latency = 13 frames. Number of samples between when the signal is received from the HD Audio link and when it appears as an analog signal at the pin.

### 7.2.5. AFG PCMCap

Table 18. AFG PCMCap Command Verb Format

	Verb ID	Payload	Response
Get	F00	0A	See bitfield table

Table 19. AFG PCMCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:21]	Rsvd2	R	0x0	Reserved
[20]	B32	R	0x0	32 bit audio formats are NOT supported
[19]	B24	R	0x1	24 bit audio formats are supported
[18]	B20	R	0x1	20 bit audio formats are supported
[17]	B16	R	0x1	16 bit audio formats are supported
[16]	B8	R	0x0	8 bit audio formats are NOT supported
[15:12]	Rsvd1	R	0x0	Reserved
[11]	R12	R	0x0	384 KHz rate (8/1*48 KHz) NOT supported

Table 19. AFG PCMCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[10]	R11	R	0x1	192.0 KHz rate (4/1*48 KHz) supported
[9]	R10	R	0x1	176.4 KHz rate (4/1*44.1 KHz) supported
[8]	R9	R	0x1	96.0 KHz rate (2/1*48 KHz) supported
[7]	R8	R	0x1	88.2 KHz rate (2/1*44.1 KHz) supported
[6]	R7	R	0x1	48.0 KHz rate supported (REQUIRED)
[5]	R6	R	0x1	44.1 KHz rate supported
[4]	R5	R	0x0	32.0 KHz rate (2/3*48 KHz) supported
[3]	R4	R	0x0	22.05 KHz rate (1/2*44.1 KHz) supported
[2]	R3	R	0x0	16.0 KHz rate (1/3*48 KHz) supported
[1]	R2	R	0x0	11.025 KHz rate (1/4*44.0 KHz) supported
[0]	R1	R	0x0	8.0 KHz rate (1/6*48 KHz) supported

### 7.2.6. AFG Stream

Table 20. AFG Stream Command Verb Format

	Verb ID	Payload	Response
Get	F00	0B	See bitfield table

Table 21. AFG Stream Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:3]	Rsvd	R	0x0	Reserved
[2]	NonPCM	R	0x0	No support for non-PCM data.
[1]	Float32	R	0x0	No support for Float32 data.
[0]	PCM	R	0x1	PCM-formatted data supported.

### 7.2.7. AFG InAmpCap

Table 22. AFG InAmpCap Command Verb Format

	Verb ID	Payload	Response
Get	F00	0D	See bitfield table

Table 23. AFG InAmpCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31]	Mute	R	0x1	Amplifier is capable of muting
[30:23]	Rsvd3	R	0x0	Reserved
[22:16]	StepSize	R	0x5	Size of each step in the gain range = 1.5dB
[15]	Rsvd2	R	0x0	Reserved
[14:8]	NumSteps	R	0x0E	Number of steps in the gain range = 15 (0dB to 22.5dB)
[7]	Rsvd1	R	0x0	Reserved
[6:0]	Offset	R	0x00	0dB-step is programmed with this offset

### 7.2.8. AFG SupPwrState

Table 24. AFG SupPwrState Command Verb Format

	Verb ID	Payload	Response
Get	F00	0F	See bitfield table

Table 25. AFG SupPwrState Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:4]	Rsvd	R	0x0	Reserved
[3]	D3Sup	R	0x1	Power State D3 is supported. Allows for lowest possible power consuming state under software control (and still properly respond to a subsequent Power State command).

Table 25. AFG SupPwrState Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[2]	D2Sup	R	0x1	Power State D2 is supported. Allows for lowest possible power consuming state from which it can return to fully on state within 10 msec.
[1]	D1Sup	R	0x1	Power State D1 is supported. Allows for lowest possible power consuming state from which it can return to fully on state within 10 msec, excepting analog pass-through circuits which must remain fully on.
[0]	D0Sup	R	0x1	Power State D0 is supported. Node power state is fully on.

### 7.2.9. AFG GPIOCnt

Table 26. AFG GPIOCnt Command Verb Format

	Verb ID	Payload	Response
Get	F00	11	See bitfield table

Table 27. AFG GPIOCnt Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31]	GPIWake	R	0x1	Wake capability. Assuming the Wake Enable Mask controls are enabled, GPIOs configured as inputs can cause a wake (generate a Status Change event on the link) when there is a change in level on the pin.
[30]	GPIOUnsol	R	0x1	Unsolicited Response capability. Assuming the Unsolicited Enable Mask controls are enabled, GPIOs configured as inputs can generate an Unsolicited Response on the link when there is a change in level on the pin.
[29:24]	Rsvd	R	0x0	Reserved
[23:16]	NumGPIS	R	0x00	Number of GPI pins supported by function

Table 27. AFG GPIOCnt Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[15:8]	NumGPOs	R	0x00	Number of GPO pins supported by function
[7:0]	NumGPIOs	R	0x04	Number of GPIO pins supported by function

### 7.2.10. AFG GPIO Polarity

Table 28. AFG GPIO Polarity Command Verb Format

	Verb ID	Payload	Response
<b>Get</b>	FE7	00	See bitfield table
<b>Set1</b>	70E7	See bits [7:0] of bitfield table	0000_0000h

Table 29. AFG GPIO Polarity Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:4]	Rsvd	R	0x0	Reserved
3	GP3	RW	0x1	GPIO 3 Input Polarity Control (used in conjunction with GPIOSticky) and Output Type Control. When configured as a level-sensitive input: 0 = inverted 1 = not inverted (default) When configured as an edge-sensitive input: 0 = falling-edge triggered 1 = rising-edge triggered When configured as an output: 0 = push-pull (CMOS) 1 = open drain (default)
2	GP2	RW	0x1	GPIO 2 Input Polarity Control (used in conjunction with GPIOSticky) and Output Type Control. When configured as a level-sensitive input: 0 = inverted 1 = not inverted (default) When configured as an edge-sensitive input: 0 = falling-edge triggered 1 = rising-edge triggered When configured as an output: 0 = push-pull (CMOS) 1 = open drain (default)

Table 29. AFG GPIO Polarity Command Response Format

Bit	Bitfield Name	RW	Reset	Description
1	GP1	RW	0x1	<p>GPIO 1 Input Polarity Control (used in conjunction with GPIOSticky) and Output Type Control.</p> <p>When configured as a level-sensitive input:</p> <ul style="list-style-type: none"> <li>0 = inverted</li> <li>1 = not inverted (default)</li> </ul> <p>When configured as an edge-sensitive input:</p> <ul style="list-style-type: none"> <li>0 = falling-edge triggered</li> <li>1 = rising-edge triggered</li> </ul> <p>When configured as an output:</p> <ul style="list-style-type: none"> <li>0 = push-pull (CMOS)</li> <li>1 = open drain (default)</li> </ul>
0	GP0	RW	0x1	<p>GPIO 0 Input Polarity Control (used in conjunction with GPIOSticky) and Output Type Control.</p> <p>When configured as a level-sensitive input:</p> <ul style="list-style-type: none"> <li>0 = inverted</li> <li>1 = not inverted (default)</li> </ul> <p>When configured as an edge-sensitive input:</p> <ul style="list-style-type: none"> <li>0 = falling-edge triggered</li> <li>1 = rising-edge triggered</li> </ul> <p>When configured as an output:</p> <ul style="list-style-type: none"> <li>0 = push-pull (CMOS)</li> <li>1 = open drain (default)</li> </ul>

### 7.2.11. AFG OutAmpCap

Table 30. AFG OutAmpCap Command Verb Format

	Verb ID	Payload	Response
Get	F00	12	See bitfield table

Table 31. AFG OutAmpCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31]	Mute	R	0x1	Amplifier is capable of muting
[30:23]	Rsvd3	R	0x0	Reserved
[22:16]	StepSize	R	0x02	Size of each step in the gain range = 0.75dB
[15]	Rsvd2	R	0x0	Reserved

Table 31. AFG OutAmpCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[14:8]	NumSteps	R	0x7F	Number of steps in the gain range = 128 (-96dB to +0dB)
[7]	Rsvd1	R	0x0	Reserved
[6:0]	Offset	R	0x7F	0dB-step is programmed with this offset

### 7.2.12. AFG PwrState

Table 32. AFG PwrState Command Verb Format

	Verb ID	Payload	Response
Get	F05	00	See bitfield table
Set1	705	See bits [7:0] of bitfield table	0000_0000h

Table 33. AFG PwrState Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd2	R	0x0	Reserved
[7:4]	Act	R	0x2	PS-Act: Actual power state of referenced node.
[3:2]	Rsvd1	R	0x0	Reserved
[1:0]	Set	RW	0x2	PS-Set: Current power setting of referenced node. 0: All Powered-On 1: D1 => PR0, PR1 2: D2 => PR0, PR1, PR2, PR6, EAPD 3: D3 => PR6, PR5, PR3, PR2, PR1, PR0, EAPD Note: PR4 is not mapped in HD Audio

### 7.2.13. AFG Unsol/Resp

Table 34. AFG Unsol/Resp Command Verb Format

	Verb ID	Payload	Response
<b>Get</b>	F08	00	See bitfield table
<b>Set1</b>	708	See bits [7:0] of bitfield table	0000_0000h

Table 35. AFG Unsol/Resp Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd2	R	0x0	Reserved
[7]	En	RW	0x0	Allow generation of Unsolicited Responses.
[6]	Rsvd1	R	0x0	Reserved
[5:0]	Tag	RW	0x0	Software programmable field returned in top six bits (31:26) of every Unsolicited Response generated by this node.

### 7.2.14. AFG GPIO

Table 36. AFG GPIO Command Verb Format

	Verb ID	Payload	Response
<b>Get</b>	F15	00	See bitfield table
<b>Set1</b>	715	See bits [7:0] of bitfield table	0000_0000h

Table 37. AFG GPIO Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:4]	Rsvd	R	0x0	Reserved
[3]	Data3	RW	0x0	Data for GPIO3 (Pin 47). If this GPIO bit is configured as Sticky (edge-sensitive) input, it can be cleared by writing zero (one) here when the corresponding Polarity Control bit is zero (one).
[2]	Data2	RW	0x0	Data for GPIO2 (Pin 44). If this GPIO bit is configured as Sticky (edge-sensitive) input, it can be cleared by writing zero (one) here when the corresponding Polarity Control bit is zero (one).
[1]	Data1	RW	0x0	Data for GPIO1 (Pin 46). If this GPIO bit is configured as Sticky (edge-sensitive) input, it can be cleared by writing zero (one) here when the corresponding Polarity Control bit is zero (one).
[0]	Data0	RW	0x0	Data for GPIO0 (Pin 45). If this GPIO bit is configured as Sticky (edge-sensitive) input, it can be cleared by writing zero (one) here when the corresponding Polarity Control bit is zero (one).

### 7.2.15. AFG GPIOEn

Table 38. AFG GPIOEn Command Verb Format

	Verb ID	Payload	Response
<b>Get</b>	F16	00	See bitfield table
<b>Set1</b>	716	See bits [7:0] of bitfield table	0000_0000h

Table 39. AFG GPIOEn Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:4]	Rsvd	R	0x0	Reserved
[3]	Mask3	RW	0x0	Enable for GPIO3: 0 = pin is disabled (Hi-Z state); 1 = pin is enabled; behavior determined by GPIO Direction control
[2]	Mask2	RW	0x0	Enable for GPIO2: 0 = pin is disabled (Hi-Z state); 1 = pin is enabled; behavior determined by GPIO Direction control
[1]	Mask1	RW	0x0	Enable for GPIO1: 0 = pin is disabled (Hi-Z state); 1 = pin is enabled; behavior determined by GPIO Direction control
[0]	Mask0	RW	0x0	Enable for GPIO0: 0 = pin is disabled (Hi-Z state); 1 = pin is enabled; behavior determined by GPIO Direction control

### 7.2.16. AFG GPIODir

Table 40. AFG GPIODir Command Verb Format

	Verb ID	Payload	Response
Get	F17	00	See bitfield table
Set1	717	See bits [7:0] of bitfield table	0000_0000h

Table 41. AFG GPIODir Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:4]	Rsvd	R	0x0	Reserved
[3]	Control3	RW	0x0	Direction control for GPIO3 0 = GPIO signal is configured as input 1 = GPIO signal is configured as output

Table 41. AFG GPIODir Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[2]	Control2	RW	0x0	Direction control for GPIO2 0 = GPIO signal is configured as input 1 = GPIO signal is configured as output
[1]	Control1	RW	0x0	Direction control for GPIO1 0 = GPIO signal is configured as input 1 = GPIO signal is configured as output
[0]	Control0	RW	0x0	Direction control for GPIO0 0 = GPIO signal is configured as input 1 = GPIO signal is configured as output

### 7.2.17. AFG GPIOWakeEn

Table 42. AFG GPIOWakeEn Command Verb Format

	Verb ID	Payload	Response
Get	F18	00	See bitfield table
Set1	718	See bits [7:0] of bitfield table	0000_0000h

Table 43. AFG GPIOWakeEn Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:4]	Rsvd	R	0x0	Reserved
[3]	W3	RW	0x0	Wake enable for GPIO3: 0 = wake-up event is disabled; 1 = when HD Audio link is powered down (RST# is asserted), a wake-up event will trigger a Status Change Request event on the link.
[2]	W2	RW	0x0	Wake enable for GPIO2: 0 = wake-up event is disabled; 1 = when HD Audio link is powered down (RST# is asserted), a wake-up event will trigger a Status Change Request event on the link.

Table 43. AFG GPIOWakeEn Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[1]	W1	RW	0x0	Wake enable for GPIO1: 0 = wake-up event is disabled; 1 = when HD Audio link is powered down (RST# is asserted), a wake-up event will trigger a Status Change Request event on the link.
[0]	W0	RW	0x0	Wake enable for GPIO0: 0 = wake-up event is disabled; 1 = when HD Audio link is powered down (RST# is asserted), a wake-up event will trigger a Status Change Request event on the link.

### 7.2.18. AFG GPIOUnsol

Table 44. AFG GPIOUnsol AFG GPIOUnsol Command Verb Format

	Verb ID	Payload	Response
Get	F19	00	See bitfield table
Set1	719	See bits [7:0] of bitfield table	0000_0000h

Table 45. AFG GPIOUnsol Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:4]	Rsvd	R	0x0	Reserved
[3]	EnMask3	RW	0x0	Unsolicited enable mask for GPIO3. If set, and the Unsolicited Response control for this widget has been enabled, an unsolicited response will be sent when GPIO3 is configured as input and changes state.
[2]	EnMask2	RW	0x0	Unsolicited enable mask for GPIO2. If set, and the Unsolicited Response control for this widget has been enabled, an unsolicited response will be sent when GPIO2 is configured as input and changes state.

Table 45. AFG GPIOUnsol Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[1]	EnMask1	RW	0x0	Unsolicited enable mask for GPIO1. If set, and the Unsolicited Response control for this widget has been enabled, an unsolicited response will be sent when GPIO1 is configured as input and changes state.
[0]	EnMask0	RW	0x0	Unsolicited enable mask for GPIO0. If set, and the Unsolicited Response control for this widget has been enabled, an unsolicited response will be sent when GPIO0 is configured as input and changes state.

### 7.2.19. AFG GPIOSticky

Table 46. AFG GPIOSticky Command Verb Format

	Verb ID	Payload	Response
Get	F1A	00	See bitfield table
Set1	71A	See bits [7:0] of bitfield table	0000_0000h

Table 47. AFG GPIOSticky Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:4]	Rsvd	R	0x0	Reserved
[3]	Mask3	RW	0x0	GPIO3 input type (when configured as input): 0 = Non-Sticky (level-sensitive); 1 = Sticky (edge-sensitive). Sticky inputs are cleared by writing zero to corresponding bit of GPIO Data register. GPIOPolarity determines rising or falling edge sensitivity.

Table 47. AFG GPIOSticky Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[2]	Mask2	RW	0x0	GPIO2 input type (when configured as input): 0 = Non-Sticky (level-sensitive); 1 = Sticky (edge-sensitive). Sticky inputs are cleared by writing zero to corresponding bit of GPIO Data register. GPIOPolarity determines rising or falling edge sensitivity.
[1]	Mask1	RW	0x0	GPIO1 input type (when configured as input): 0 = Non-Sticky (level-sensitive); 1 = Sticky (edge-sensitive). Sticky inputs are cleared by writing zero to corresponding bit of GPIO Data register. GPIOPolarity determines rising or falling edge sensitivity.
[0]	Mask0	RW	0x0	GPIO0 input type (when configured as input): 0 = Non-Sticky (level-sensitive); 1 = Sticky (edge-sensitive). Sticky inputs are cleared by writing zero to corresponding bit of GPIO Data register. GPIOPolarity determines rising or falling edge sensitivity.

### 7.2.20. AFG SubID

Table 48. AFG SubID Command Verb Format

	Verb ID	Payload	Response
<b>Get</b>	F20	00	See bitfield table
<b>Set1</b>	720	See bits [7:0] of bitfield table	0000_0000h
<b>Set2</b>	721	See bits [15:8] of bitfield table	0000_0000h
<b>Set3</b>	722	See bits [23:16] of bitfield table	0000_0000h
<b>Set4</b>	723	See bits [31:24] of bitfield table	0000_0000h

**Table 49. AFG SubID Command Response Format**

<b>Bit</b>	<b>Bitfield Name</b>	<b>RW</b>	<b>Reset</b>	<b>Description</b>
[31:24]	Subsys3	RW	0x00	Subsystem ID. (Any non-zero value)
[23:16]	Subsys2	RW	0x00	Subsystem ID. (Any non-zero value)
[15:8]	Subsys1	RW	0x01	Subsystem ID. (Any non-zero value)
[7:0]	Assembly	RW	0x00	Assembly ID. (Not applicable to CODEC vendors)

### 7.3. DAC0 Node (NID = 0x02)

#### 7.3.1. *DAC0 Cnvtr*

**Table 50. DAC0 Cnvtr Command Verb Format**

	<b>Verb ID</b>	<b>Payload</b>	<b>Response</b>
<b>Get</b>	A	0000	See bitfield table
<b>Set1</b>	2	See bits [15:0] of bitfield table	0000_0000h

**Table 51. DAC0 Cnvtr Command Response Format**

<b>Bit</b>	<b>Bitfield Name</b>	<b>RW</b>	<b>Reset</b>	<b>Description</b>
[31:16]	Rsvd2	R	0x0	Reserved
[15]	StrmType	R	0x0	Stream Type: only PCM streams are supported by this widget.
[14]	FrmtSmplRate	RW	0x0	Sample Base Rate 0 = 48 KHz 1 = 44.1 KHz
[13:11]	SmplRateMultp	RW	0x0	Sample Base Rate Multiple 000 = 48 KHz/44.1 KHz or less 001 = x2 010 = Reserved (x3) 011 = x4 100-111 = Reserved

Table 51. DAC0 Cnvtr Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[10:8]	SmplRateDiv	RW	0x0	Sample Base Rate Divisor 000 = Divide by 1 001 = Divide by 2 010 = Divide by 3 011 = Divide by 4 100 = Divide by 5 101 = Divide by 6 110 = Divide by 7 111 = Divide by 8
[7]	Rsvd1	R	0x0	Reserved
[6:4]	BitsPerSmpl	RW	0x3	Bits per Sample 000 = 8 bits 001 = 16 bits 010 = 20 bits 011 = 24 bits 100-111 = Reserved
[3:0]	NmbrChan	RW	0x1	Number of Channels Number of channels in each frame of the stream. 0000 = 1 channel 0001 = 2 channels ... 1111 = 16 channels

### 7.3.2. DAC0 AmpRight

Table 52. DAC0 AmpRight Command Verb Format

	Verb ID	Payload	Response
Get	B80	00	See bitfield table
Set1	390	See bits [7:0] of bitfield table	0000_0000h

Table 53. DAC0 AmpRight Command Response Format

Bit	Bitfield Name	RW	Reset	Description

Table 53. DAC0 AmpRight Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[7]	Mute	RW	0x1	1 = Mute is active
[6:0]	Gain	RW	0x7F	Amplifier gain step number

### 7.3.3. DAC0 AmpLeft

Table 54. DAC0 AmpLeft Command Verb Format

	Verb ID	Payload	Response
Get	BA0	00	See bitfield table
Set1	3A0	See bits [7:0] of bitfield table	0000_0000h

Table 55. DAC0 AmpLeft Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd	R	0x0	Reserved
[7]	Mute	RW	0x1	1 = Mute is active
[6:0]	Gain	RW	0x7F	Amplifier gain step number

### 7.3.4. DAC0 WCap

Table 56. DAC0 WCap Command Verb Format

	Verb ID	Payload	Response
Get	F00	09	See bitfield table

Table 57. DAC0 WCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:24]	Rsvd2	R	0x0	Reserved
[23:20]	Type	R	0x0	Widget type = Audio Output

Table 57. DAC0 WCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[19:16]	Delay	R	0xD	Number of sample delays through widget
[15:12]	Rsvd1	R	0x0	Reserved
[11]	SwapCap	R	0x1	Left and right channels can be swapped
[10]	PwrCntrl	R	0x1	Power State control is supported
[9]	Dig	R	0x0	Widget supports an Analog stream
[8]	ConnList	R	0x0	No connection list is present
[7]	UnSolCap	R	0x0	No support for Unsolicited Response
[6]	ProcWidget	R	0x0	No Processing Controls parameter.
[5]	Stripe	R	0x0	No support for striping
[4]	FormatOvrd	R	0x0	No format info; use default format parameters from Audio Function node instead
[3]	AmpParOvrd	R	0x0	No amplifier info; use default amplifier parameters from Audio Function node instead
[2]	OutAmpPrsnt	R	0x1	Output amplifier
[1]	InAmpPrsnt	R	0x0	No input amplifier
[0]	Stereo	R	0x1	Stereo widget

### 7.3.5. DAC0 PwrState

Table 58. DAC0 PwrState Command Verb Format

	Verb ID	Payload	Response
Get	F05	00	See bitfield table
Set1	705	See bits [7:0] of bitfield table	0000_0000h

Table 59. DAC0 PwrState Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd2	R	0x0	Reserved
[7:4]	Act	R	0x3	PS-Act: Actual power state of referenced node.
[3:2]	Rsvd1	R	0x0	Reserved
[1:0]	Set	RW	0x3	PS-Set: Current power setting of referenced node. 00 - Fully on. 01 - Fully on. 10 - Fully on. 11 - Powered down.

### 7.3.6. DAC0 CnvtrID

Table 60. DAC0 CnvtrID Command Verb Format

	Verb ID	Payload	Response
Get	F06	00	See bitfield table
Set1	706	See bits [7:0] of bitfield table	0000_0000h

Table 61. DAC0 CnvtrID Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd	R	0x0	Reserved
[7:4]	Strm	RW	0x0	Software-programmable integer representing link stream ID used by the converter widget. By convention stream 0 is reserved as unused.
[3:0]	Ch	RW	0x0	Integer representing lowest channel used by converter.

### 7.3.7. *DAC0 LR*

**Table 62. DAC0 LR Command Verb Format**

	Verb ID	Payload	Response
<b>Get</b>	F0C	00	See bitfield table
<b>Set1</b>	70C	See bits [7:0] of bitfield table	0000_0000h

**Table 63. DAC0 LR Command Response Format**

Bit	Bitfield Name	RW	Reset	Description
[31:3]	Rsvd2	R	0x0	Reserved
[2]	SwapEn	RW	0x0	1 = Enable swapping of left and right channels.
[1:0]	Rsvd1	R	0x0	Reserved

## 7.4. DAC1 Node (NID = 0x03)

### 7.4.1. *DAC1 Cnvtr*

**Table 64. DAC1 Cnvtr Command Verb Format**

	Verb ID	Payload	Response
<b>Get</b>	A	0000	See bitfield table
<b>Set1</b>	2	See bits [15:0] of bitfield table	0000_0000h

**Table 65. DAC1 Cnvtr Command Response Format**

Bit	Bitfield Name	RW	Reset	Description
[31:16]	Rsvd2	R	0x0	Reserved
[15]	StrmType	R	0x0	Stream Type: only PCM streams are supported by this widget.
[14]	FrmtSmplRate	RW	0x0	Sample Base Rate 0 = 48 KHz 1 = 44.1 KHz

Table 65. DAC1 Cnvtr Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[13:11]	SmplRateMultp	RW	0x0	Sample Base Rate Multiple 000 = 48 KHz / 44.1 KHz or less 001 = x2 010 = Reserved (x3) 011 = x4 100-111 = Reserved
[10:8]	SmplRateDiv	RW	0x0	Sample Base Rate Divisor 000 = Divide by 1 001 = Divide by 2 010 = Divide by 3 011 = Divide by 4 100 = Divide by 5 101 = Divide by 6 110 = Divide by 7 111 = Divide by 8
[7]	Rsvd1	R	0x0	Reserved
[6:4]	BitsPerSmpl	RW	0x3	Bits per Sample 000 = 8 bits 001 = 16 bits 010 = 20 bits 011 = 24 bits 100-111 = Reserved
[3:0]	NmbrChan	RW	0x1	Number of Channels - Number of channels in each frame of the stream. 0000 = 1 channel 0001 = 2 channels ... 1111 = 16 channels

#### 7.4.2. DAC1 AmpRight

Table 66. DAC1 AmpRight Command Verb Format

	Verb ID	Payload	Response
Get	B80	00	See bitfield table
Set1	390	See bits [7:0] of bitfield table	0000_0000h

**Table 67. DAC1 AmpRight Command Response Format**

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd	R	0x0	Reserved
[7]	Mute	RW	0x1	1 = Mute is active
[6:0]	Gain	RW	0x7F	Amplifier gain step number

**7.4.3. DAC1 AmpLeft****Table 68. DAC1 AmpLeft Command Verb Format**

	Verb ID	Payload	Response
Get	BA0	00	See bitfield table
Set1	3A0	See bits [7:0] of bitfield table	0000_0000h

**Table 69. DAC1 AmpLeft Command Response Format**

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd	R	0x0	Reserved
[7]	Mute	RW	0x1	1 = Mute is active
[6:0]	Gain	RW	0x7F	Amplifier gain step number

**7.4.4. DAC1 WCap****Table 70. DAC1 WCap Command Verb Format**

	Verb ID	Payload	Response
Get	F00	09	See bitfield table

Table 71. DAC1 WCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:24]	Rsvd2	R	0x0	Reserved
[23:20]	Type	R	0x0	Widget type = Audio Output
[19:16]	Delay	R	0xD	Number of sample delays through widget
[15:12]	Rsvd1	R	0x0	Reserved
[11]	SwapCap	R	0x1	Left and right channels can be swapped
[10]	PwrCntrl	R	0x1	Power State control is supported
[9]	Dig	R	0x0	Widget supports an Analog stream
[8]	ConnList	R	0x0	No connection list is present
[7]	UnSolCap	R	0x0	No support for Unsolicited Response
[6]	ProcWidget	R	0x0	No Processing Controls parameter.
[5]	Stripe	R	0x0	No support for striping
[4]	FormatOvrd	R	0x0	No format info; use default format parameters from Audio Function node instead
[3]	AmpParOvrd	R	0x0	No amplifier info; use default amplifier parameters from Audio Function node instead
[2]	OutAmpPrsnt	R	0x1	Output amplifier
[1]	InAmpPrsnt	R	0x0	No input amplifier
[0]	Stereo	R	0x1	Stereo widget

#### 7.4.5. DAC1 PwrState

Table 72. DAC1 PwrState Command Verb Format

	Verb ID	Payload	Response
Get	F05	00	See bitfield table
Set1	705	See bits [7:0] of bitfield table	0000_0000h

Table 73. DAC1 PwrState Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd2	R	0x0	Reserved
[7:4]	Act	R	0x3	PS-Act: Actual power state of referenced node.
[3:2]	Rsvd1	R	0x0	Reserved
[1:0]	Set	RW	0x3	PS-Set: Current power setting of referenced node. 00 - Fully on. 01 - Fully on. 10 - Fully on. 11 - Powered down.

#### 7.4.6. DAC1 CnvtrID

Table 74. DAC1 CnvtrID Command Verb Format

	Verb ID	Payload	Response
Get	F06	00	See bitfield table
Set1	706	See bits [7:0] of bitfield table	0000_0000h

**Table 75. DAC1 CnvtrID Command Response Format**

<b>Bit</b>	<b>Bitfield Name</b>	<b>RW</b>	<b>Reset</b>	<b>Description</b>
[31:8]	Rsvd	R	0x0	Reserved
[7:4]	Strm	RW	0x0	Software-programmable integer representing link stream ID used by the converter widget. By convention stream 0 is reserved as unused.
[3:0]	Ch	RW	0x0	Integer representing lowest channel used by converter.

**7.4.7. DAC1 LR****Table 76. DAC1 LR Command Verb Format**

	<b>Verb ID</b>	<b>Payload</b>	<b>Response</b>
<b>Get</b>	F0C	00	See bitfield table

### 7.8.1. ADC1 Cnvtr

Table 120. ADC1 Cnvtr Command Verb Format

	Verb ID	Payload	Response
Get	A	0000	See bitfield table
Set1	2	See bits [15:0] of bitfield table	0000_0000h

Table 121. ADC1 Cnvtr Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:16]	Rsvd2	R	0x0	Reserved
[15]	StrmType	R	0x0	Stream Type: only PCM streams are supported by this widget.

Table 121. ADC1 Cnvtr Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[14]	FrmtSmplRate	RW	0x0	Sample Base Rate 0 = 48 KHz 1 = 44.1 KHz
[13:11]	SmplRateMultp	RW	0x0	Sample Base Rate Multiple 000 = 48 KHz / 44.1 KHz or less 001 = x2 010 = Reserved (x3) 011 = x4 100-111 = Reserved
[10:8]	SmplRateDiv	RW	0x0	Sample Base Rate Divisor 000 = Divide by 1 001 = Divide by 2 010 = Divide by 3 011 = Divide by 4 100 = Divide by 5 101 = Divide by 6 110 = Divide by 7 111 = Divide by 8
[7]	Rsvd1	R	0x0	Reserved
[6:4]	BitsPerSmpl	RW	0x3	Bits per Sample 000 = 8 bits 001 = 16 bits 010 = 20 bits 011 = 24 bits 100-111 = Reserved
[3:0]	NmbrChan	RW	0x1	Number of Channels - Number of channels in each frame of the stream. 0000 = 1 channel 0001 = 2 channels ... 1111 = 16 channels

### 7.8.2. ADC1 WCap

Table 122. ADC1 WCap Command Verb Format

	Verb ID	Payload	Response
Get	F00	09	See bitfield table

Table 123. ADC1 WCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:24]	Rsvd2	R	0x0	Reserved
[23:20]	Type	R	0x1	Widget type = Audio Input
[19:16]	Delay	R	0xD	Number of sample delays through widget
[15:12]	Rsvd1	R	0x0	Reserved
[11]	SwapCap	R	0x0	No left/right swap capability
[10]	PwrCntrl	R	0x1	Power State control is supported
[9]	Dig	R	0x0	Widget supports an Analog stream
[8]	ConnList	R	0x1	Connection list is present
[7]	UnSolCap	R	0x0	No support for Unsolicited Response
[6]	ProcWidget	R	0x1	Software should query the Processing Controls parameter for this widget.
[5]	Stripe	R	0x0	No support for striping
[4]	FormatOvrd	R	0x0	No format info; use default format parameters from Audio Function node instead
[3]	AmpParOvrd	R	0x0	No amplifier info; use default amplifier parameters from Audio Function node instead
[2]	OutAmpPrsnt	R	0x0	No output amplifier
[1]	InAmpPrsnt	R	0x0	No input amplifier
[0]	Stereo	R	0x1	Stereo widget

### 7.8.3. ADC1 ConLst

Table 124. ADC1 ConLst Command Verb Format

	Verb ID	Payload	Response
Get	F00	0E	See bitfield table

Table 125. ADC1 ConLst Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd	R	0x0	Reserved.
[7]	LForm	R	0x0	Connection list uses short-form (7-bit) NID entries.
[6:0]	ConL	R	0x01	Number of NID entries in connection list.

### 7.8.4. ADC1 ConLstEntry

Table 126. ADC1 ConLstEntry Command Verb Format

	Verb ID	Payload	Response
Get	F02	00	See bitfield table

Table 127. ADC1 ConLstEntry Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:24]	ConL3	R	0x00	Unused list entry.
[23:16]	ConL2	R	0x00	Unused list entry.
[15:8]	ConL1	R	0x00	Unused list entry.
[7:0]	ConL0	R	0x18	ADC1 Vol widget

### 7.8.5. ADC1 ProcState

Table 128. ADC1 ProcState Command Verb Format

	Verb ID	Payload	Response
Get	F03	00	See bitfield table
Set1	703	See bits [7:0] of bitfield table	0000_0000h

Table 129. ADC1 ProcState Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd2	R	0x0	Reserved
[7]	HPFOCDIS	RW	0x0	High Pass Filter Offset Calculation Disable 0 = Calculation enabled. 1 = Calculation disabled.
[6:2]	Rsvd1	R	0x0	Reserved
[1:0]	ADCHPFByp	RW	0x1	Processing State = 00 (OFF): bypass the ADC high pass filter; Processing State = 01, 10, 11 (ON or BENIGN): ADC high pass filter is enabled.

### 7.8.6. ADC1 PwrState

Table 130. ADC1 PwrState Command Verb Format

	Verb ID	Payload	Response
Get	F05	00	See bitfield table
Set1	705	See bits [7:0] of bitfield table	0000_0000h

Table 131. ADC1 PwrState Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd2	R	0x0	Reserved
[7:4]	Act	R	0x3	PS-Act: Actual power state of referenced node.

Table 131. ADC1 PwrState Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[3:2]	Rsvd1	R	0x0	Reserved
[1:0]	Set	RW	0x3	PS-Set: Current power setting of referenced node. 00 - Fully on. 01 - Fully on. 10 - Fully on. 11 - Powered down (default)

### 7.8.7. ADC1 CnvtrID

Table 132. ADC1 CnvtrID Command Verb Format

	Verb ID	Payload	Response
Get	F06	00	See bitfield table
Set1	706	See bits [7:0] of bitfield table	0000_0000h

Table 133. ADC1 CnvtrID Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd	R	0x0	Reserved
[7:4]	Strm	RW	0x0	Software-programmable integer representing link stream ID used by the converter widget. By convention, stream 0 is reserved as unused.
[3:0]	Ch	RW	0x0	Integer representing lowest channel used by converter

## 7.9. SPDIFOut Node (NID = 0x08)

### 7.9.1. *SPDIFOut Cnvtr*

Table 134. SPDIFOut Cnvtr Command Verb Format

	Verb ID	Payload	Response
Get	A	0000	See bitfield table
Set1	2	See bits [15:0] of bitfield table	0000_0000h

Table 135. SPDIFOut Cnvtr Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:16]	Rsvd2	R	0x0	Reserved
[15]	FrmtNonPCM	RW	0x0	Stream Type 0 = PCM 1 = Non-PCM (remaining bits in this verb have other meanings)
[14]	FrmtSmplRate	RW	0x0	Sample Base Rate 0 = 48 KHz 1 = 44.1 KHz
[13:11]	SmplRateMultp	RW	0x0	Sample Base Rate Multiple 000 = 48 KHz / 44.1 KHz or less 001 = x2 010 = Reserved (x3) 011 = x4 100-111 = Reserved
[10:8]	SmplRateDiv	RW	0x0	Sample Base Rate Divisor 000 = Divide by 1 001 = Divide by 2 010 = Divide by 3 011 = Divide by 4 100 = Divide by 5 101 = Divide by 6 110 = Divide by 7 111 = Divide by 8
[7]	Rsvd1	R	0x0	Reserved

Table 135. SPDIFOut Cnvtr Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[6:4]	BitsPerSmpl	RW	0x3	Bits per Sample 000 = 8 bits 001 = 16 bits 010 = 20 bits 011 = 24 bits 100-111 = Reserved
[3:0]	NmbrChan	RW	0x1	Number of Channels - Number of channels in each frame of the stream. 0000 = 1 channel 0001 = 2 channels ... 1111 = 16 channels

### 7.9.2. SPDIFOut WCap

Table 136. SPDIFOut WCap Command Verb Format

	Verb ID	Payload	Response
Get	F00	09	See bitfield table

Table 137. SPDIFOut WCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:24]	Rsvd2	R	0x0	Reserved
[23:20]	Type	R	0x0	Widget type = Audio Output
[19:16]	Delay	R	0x4	Number of sample delays through widget
[15:12]	Rsvd1	R	0x0	Reserved
[11]	SwapCap	R	0x0	No left/right channel swap capability
[10]	PwrCntrl	R	0x0	No support for Power State control
[9]	Dig	R	0x1	Widget supports a Digital stream
[8]	ConnList	R	0x0	No connection list is present

Table 137. SPDIFOut WCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[7]	UnSolCap	R	0x0	No support for Unsolicited Response
[6]	ProcWidget	R	0x0	No Processing Controls parameter
[5]	Stripe	R	0x0	No support for striping
[4]	FormatOvrd	R	0x1	Widget contains format info; software should query
[3]	AmpParOvrd	R	0x0	No amplifier info; use default amplifier parameters from Audio Function node instead
[2]	OutAmpPrsnt	R	0x0	No output amplifier
[1]	InAmpPrsnt	R	0x0	No input amplifier
[0]	Stereo	R	0x1	Stereo widget

### 7.9.3. SPDIFOut PCM

Table 138. SPDIFOut PCM Command Verb Format

	Verb ID	Payload	Response
Get	F00	0A	See bitfield table

Table 139. SPDIFOut PCM Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:21]	Rsvd2	R	0x0	Reserved
[20]	B32	R	0x0	32 bit audio formats are NOT supported
[19]	B24	R	0x1	24 bit audio formats are supported
[18]	B20	R	0x1	20 bit audio formats are supported
[17]	B16	R	0x1	16 bit audio formats are supported
[16]	B8	R	0x0	8 bit audio formats are NOT supported

Table 139. SPDIFOut PCM Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[15:12]	Rsvd1	R	0x0	Reserved
[11]	R12	R	0x0	384 KHz rate (8/1*48 KHz) NOT supported
[10]	R11	R	0x1	192.0 KHz rate (4/1*48 KHz) supported
[9]	R10	R	0x1	176.4 KHz rate (4/1*44.1 KHz) supported
[8]	R9	R	0x1	96.0 KHz rate (2/1*48 KHz) supported
[7]	R8	R	0x1	88.2 KHz rate (2/1*44.1 KHz) supported
[6]	R7	R	0x1	48.0 KHz rate supported (REQUIRED)
[5]	R6	R	0x1	44.1 KHz rate supported
[4]	R5	R	0x0	32.0 KHz rate (2/3*48 KHz) NOT supported
[3]	R4	R	0x0	22.05 KHz rate (1/2*44.1 KHz) NOT supported
[2]	R3	R	0x0	16.0 KHz rate (1/3*48 KHz) NOT supported
[1]	R2	R	0x0	11.025 KHz rate (1/4*44.0 KHz) NOT supported
[0]	R1	R	0x0	8.0 KHz rate (1/6*48 KHz) NOT supported

#### 7.9.4. SPDIFOut Stream

Table 140. SPDIFOut Stream Command Verb Format

	Verb ID	Payload	Response
Get	F00	0B	See bitfield table

Table 141. SPDIFOut Stream Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:3]	Rsvd	R	0x0	Reserved
[2]	NonPCM	R	0x1	Non-PCM data supported.

Table 141. SPDIFOut Stream Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[1]	Float32	R	0x0	No support for Float32 data.
[0]	PCM	R	0x1	PCM-formatted data supported.

### 7.9.5. *SPDIFOut CnvtrID*

Table 142. SPDIFOut CnvtrID Command Verb Format

	Verb ID	Payload	Response
Get	F06	00	See bitfield table
Set1	706	See bits [7:0] of bitfield table	0000_0000h

Table 143. SPDIFOut CnvtrID Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd	R	0x0	Reserved
[7:4]	Strm	RW	0x0	Software-programmable integer representing link stream ID used by the converter widget. By convention stream 0 is reserved as unused.
[3:0]	Ch	RW	0x0	Integer representing lowest channel used by converter

## 7.11. PortA Node (NID = 0x0A)

### 7.11.1. PortA WCap

Table 162. PortA WCap Command Verb Format

	Verb ID	Payload	Response
Get	F00	09	See bitfield table

Table 163. PortA WCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:24]	Rsvd2	R	0x0	Reserved
[23:20]	Type	R	0x4	Widget type = Pin Complex
[19:16]	Delay	R	0x0	Number of sample delays through widget
[15:12]	Rsvd1	R	0x0	Reserved
[11]	SwapCap	R	0x0	No left/right channel swap capability
[10]	PwrCntrl	R	0x0	No support for Power State control
[9]	Dig	R	0x0	Widget supports an Analog stream
[8]	ConnList	R	0x1	Connection list is present
[7]	UnSolCap	R	0x1	Unsolicited Response is supported
[6]	ProcWidget	R	0x0	No Processing Controls parameter
[5]	Stripe	R	0x0	No support for striping

Table 163. PortA WCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[4]	FormatOvrd	R	0x0	N/A for pin complex
[3]	AmpParOvrd	R	0x0	No amplifier info; use default amplifier parameters from Audio Function node instead
[2]	OutAmpPrsnt	R	0x0	No output amplifier
[1]	InAmpPrsnt	R	0x0	No input amplifier
[0]	Stereo	R	0x1	Stereo widget

### 7.11.2. PortA PinCap

Table 164. PortA PinCap Command Verb Format

	Verb ID	Payload	Response
Get	F00	0C	See bitfield table

Table 165. PortA PinCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:17]	Rsvd2	R	0x0	Reserved
[16]	EapdCap	R	0x0	This widget does not control EAPD pin
[15:8]	VrefCntrl	R	0x17	VRef generation is supported by this pin complex, and the following voltages can be produced on the associated VRef pin: 80% AVdd; 50% AVdd; GND; Hi-Z (required since pin complex is output capable)
[7]	Rsvd1	R	0x0	Reserved
[6]	BalancedIO	R	0x0	Pin complex does not have balanced pins.
[5]	InCap	R	0x1	Pin complex is input capable.
[4]	OutCap	R	0x1	Pin complex is output capable.

Table 165. PortA PinCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[3]	HdphDrvCap	R	0x1	Pin complex has headphone amplifier.
[2]	PresDtctCap	R	0x1	Pin complex can perform Presence Detect.
[1]	TrigRqd	R	0x1	Trigger is required for impedance measurement.
[0]	ImpSenseCap	R	0x1	Pin complex supports impedance sense.

### 7.11.3. PortA ConLst

Table 166. PortA ConLst Command Verb Format

	Verb ID	Payload	Response
Get	F00	0E	See bitfield table

Table 167. PortA ConLst Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd	R	0x0	Reserved
[7]	LForm	R	0x0	Connection list uses short-form (7-bit) NID entries.
[6:0]	ConL	R	0x01	Number of NID entries in connection list.

### 7.11.4. PortA ConLstEntry

Table 168. PortA ConLstEntry Command Verb Format

	Verb ID	Payload	Response
Get	F02	00	See bitfield table

**Table 169. PortA ConLstEntry Command Response Format**

<b>Bit</b>	<b>Bitfield Name</b>	<b>RW</b>	<b>Reset</b>	<b>Description</b>
[31:24]	ConL3	R	0x00	Unused list entry.
[23:16]	ConL2	R	0x00	Unused list entry.
[15:8]	ConL1	R	0x00	Unused list entry.
[7:0]	ConL0	R	0x02	DAC0 Converter widget

**7.11.5. PortA PinWCntrl****Table 170. PortA PinWCntrl Command Verb Format**

	<b>Verb ID</b>	<b>Payload</b>	<b>Response</b>
<b>Get</b>	F07	00	See bitfield table
<b>Set1</b>	707	See bits [7:0] of bitfield table	0000_0000h

**Table 171. PortA PinWCntrl Command Response Format**

<b>Bit</b>	<b>Bitfield Name</b>	<b>RW</b>	<b>Reset</b>	<b>Description</b>
[31:8]	Rsvd2	R	0x0	Reserved
[7]	HPhnEn	RW	0x0	1 = Enable the low impedance amplifier associated with the output.
[6]	OutEn	RW	0x0	1 = CODEC output path of Pin Widget is enabled
[5]	InEn	RW	0x0	1 = CODEC input path of Pin Widget is enabled

Table 171. PortA PinWCntrl Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[4:3]	Rsvd1	R	0x0	Reserved
[2:0]	VRefEn	RW	0x0	VRefEn: Selects one of the possible states for the VRef signal associated with the Pin Widget. If the value written to this control does not correspond to a supported value defined in the VRefCntrl field of the Pin Capabilities parameter (0C), then this control will take the value of 000b (Hi-Z).

#### 7.11.6. PortA Unsol/Resp

Table 172. PortA Unsol/Resp Command Verb Format

	Verb ID	Payload	Response
Get	F08	00	See bitfield table
Set1	708	See bits [7:0] of bitfield table	0000_0000h

Table 173. PortA Unsol/Resp Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd2	R	0x00	Reserved
[7]	En	RW	0x0	Allow generation of Unsolicited Responses. Unsolicited response events occur upon jack-insertion OR completion of a Jack-Sense cycle.
[6]	Rsvd1	R	0x0	Reserved
[5:0]	Tag	RW	0x00	Software programmable field returned in top six bits (31:26) of every Unsolicited Response generated by this node.

### 7.11.7. PortA ChSense

Table 174. PortA ChSense Command Verb Format

	Verb ID	Payload	Response
<b>Get</b>	F09	00	See bitfield table
<b>Set1</b>	709	See bits [7:0] of bitfield table	0000_0000h
<b>Set2</b>	709	See bits [15:8] of bitfield table	0000_0000h

Table 175. PortA ChSense Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31]	PresDtct	R	0x0	1 = Something is plugged into jack associated with Pin Complex.
[30:0]	Impedance	R	0x7FFF_FFFF	Measured impedance of the widget. A value of all 1s indicates that a valid sense reading is not available, or the sense measurement is busy if it has been recently triggered.
[0]	RightCh	W	0x0	Set 1 = Perform impedance sensing on right channel or ring of the connector
[0]	LeftCh	W	0x0	Set 0 = Perform impedance sensing on left channel or tip of the connector

### 7.11.8. PortA ConfigDefault

Bit	Bitfield Name	RW	Reset	Description
[4:3]	Rsvd1	R	0x0	Reserved
[2:0]	VRefEn	RW	0x0	VRefEn: Selects one of the possible states for the VRef signal associated with the Pin Widget. If the value written to this control does not correspond to a supported value defined in the VRefCntrl field of the Pin Capabilities parameter (0C), then this control will take the value of 000b (Hi-Z).

#### 7.14.6. PortD UnsolResp

Table 220. PortD UnsolResp Command Verb Format

	Verb ID	Payload	Response
Get	F08	00	See bitfield table
Set1	708	See bits [7:0] of bitfield table	0000_0000h

Table 221. PortD UnsolResp Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:8]	Rsvd2	R	0x00	Reserved
[7]	En	RW	0x0	Allow generation of Unsolicited Responses. Unsolicited response events occur upon jack-insertion OR completion of a Jack-Sense cycle.
[6]	Rsvd1	R	0x0	Reserved
[5:0]	Tag	RW	0x00	Software programmable field returned in top six bits (31:26) of every Unsolicited Response generated by this node.

### 7.14.7. PortD ChSense

Table 222. PortD ChSense Command Verb Format

	Verb ID	Payload	Response
<b>Get</b>	F09	00	See bitfield table
<b>Set1</b>	709	See bits [7:0] of bitfield table	0000_0000h
<b>Set2</b>	709	See bits [15:8] of bitfield table	0000_0000h

Table 223. PortD ChSense Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31]	PresDtct	R	0x0	1 = Something is plugged into jack associated with Pin Complex.
[30:0]	Impedance	R	0x7FFF_FFFF	Measured impedance of the widget. A value of all 1s indicates that a valid sense reading is not available, or the sense measurement is busy if it has been recently triggered.
[0]	RightCh	W	0x0	Set 1 = Perform impedance sensing on right channel or ring of the connector
[0]	LeftCh	W	0x0	Set 0 = Perform impedance sensing on left channel or tip of the connector

### 7.14.8. PortD ConfigDefault

Table 224. PortD ConfigDefault Command Verb Format

	Verb ID	Payload	Response
<b>Get</b>	F1C	00	See bitfield table
<b>Set1</b>	71C	See bits [7:0] of bitfield table	0000_0000h

**Table 225. PortD ConfigDefault Command Response Format**

Bit	Bitfield Name	RW	Reset	Description
[31:24]	Config4	RW	0x02	Configuration bits used by software to determine devices attached to the CODEC.
[23:16]	Config3	RW	0xA1	Configuration bits used by software to determine devices attached to the CODEC.
[15:8]	Config2	RW	0x90	Configuration bits used by software to determine devices attached to the CODEC.
[7:0]	Config1	RW	0x50	Configuration bits used by software to determine devices attached to the CODEC.

## 7.15. PortE Node (NID = 0x0E)

### 7.15.1. PortE WCap

**Table 226. PortE WCap Command Verb Format**

	Verb ID	Payload	Response
Get	F00	09	See bitfield table

**Table 227. PortE WCap Command Response Format**

Bit	Bitfield Name	RW	Reset	Description
[31:24]	Rsvd2	R	0x0	Reserved
[23:20]	Type	R	0x4	Widget type = Pin Complex
[19:16]	Delay	R	0x0	Number of sample delays through widget
[15:12]	Rsvd1	R	0x0	Reserved
[11]	SwapCap	R	0x0	No left/right channel swap capability
[10]	PwrCntrl	R	0x0	No support for Power State control
[9]	Dig	R	0x0	Widget supports an Analog stream

Table 227. PortE WCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[8]	ConnList	R	0x0	Connection list is present
[7]	UnSolCap	R	0x1	Unsolicited Response is supported
[6]	ProcWidget	R	0x0	No Processing Controls parameter
[5]	Stripe	R	0x0	No support for striping
[4]	FormatOvrd	R	0x0	N/A for pin complex
[3]	AmpParOvrd	R	0x0	No amplifier info; use default amplifier parameters from Audio Function node instead
[2]	OutAmpPrsnt	R	0x0	No output amplifier
[1]	InAmpPrsnt	R	0x0	No input amplifier
[0]	Stereo	R	0x1	Stereo widget

### 7.15.2. PortE PinCap

Table 228. PortE PinCap Command Verb Format

	Verb ID	Payload	Response
Get	F00	0C	See bitfield table

Table 229. PortE PinCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[31:17]	Rsvd2	R	0x0	Reserved
[16]	EapdCap	R	0x0	This widget does not control EAPD pin
[15:8]	VrefCntrl	R	0x00	VRef generation not supported by this pin complex.
[7]	Rsvd1	R	0x0	Reserved
[6]	BalancedIO	R	0x0	Pin complex does not have balanced pins.

Table 229. PortE PinCap Command Response Format

Bit	Bitfield Name	RW	Reset	Description
[5]	InCap	R	0x1	Pin complex is input capable.
[4]	OutCap	R	0x0	Pin complex is output capable.
[3]	HdphDrvCap	R	0x0	Pin does not have a headphone amplifier.
[2]	PresDtctCap	R	0x1	Pin complex can perform Presence Detect.
[1]	TrigRqd	R	0x0	N/A
[0]	ImpSenseCap	R	0x0	Pin complex does not support impedance sense.

### 7.15.3. PortE PinWCntrl

Table 230. PortE PinWCntrl Command Verb Format

## 8. ORDERING INFORMATION

### 8.1. 92HD202 Part Order Numbers

Part Order Number	Voltage	DAC SNR	Dolby	Pkg Pins
92HD202XX5PRGXyyX	5 V	95dB	No	48 LQFP
92HD202DX5PRGXyyX	5 V	95dB	YES	48 LQFP

*Note: When ordering these parts the "yy" will be replaced with the CODEC revision. Add an "8" to the end of any of these part numbers for delivery on Tape and Reel. The minimum order quantity for Tape and Reel is 2,000 units.*

## 9. PIN INFORMATION

### 9.1. 92HD202 Pin Diagram

Figure 4. 48-Pin LQFP Pinout

\*Port F (pins 16 & 17) can drive 32 ohm headphones, but is designed to provide less power than the headphone amplifiers on ports A (pins 39 & 41) and D (pins 35 & 36).

## 9.2. Pin Table for 92HD202 in 48 Pin LQFP

Pin Name	Pin Function	I/O	Internal Pull-up /Pull-down	Pin Location
DVDD_CORE	Digital Vdd = 3.3 V	I(Digital)	None	1
Volume Up	Volume Control	I(Digital)	Pull-Up	2
Volume Down	Volume Control	I(Digital)	Pull-Up	3
DVSS	Digital Ground	I(Digital)	None	4
SDATA_OUT	HD Audio Serial Data output (inbound stream)	I/O(Digital)	None	5
BIT_CLK	HD Audio Bit Clock	I(Digital)	None	6
DVSS3	Digital Ground	I(Digital)	None	7
SDATA_IN	HD Audio Serial Data input (outbound stream)	O(Digital)	None	8
DVDD_CORE3	Digital Vdd = 3.3 V	I(Digital)	None	9
SYNC	HD Audio Frame Sync	I(Digital)	None	10
RESET#	HD Audio Reset	I(Digital)	None	11
PC_BEEP	PC Beep	I(Analog)	None	12
Sense A	Jack insertion detection Ports A, B, C, D	I(Analog)	None	13
PORT-E_L	Input Left Channel Port E	I(Analog)	None	14
PORT-E_R	Input Right Channel Port E	I(Analog)	None	15
PORT-F_L (HP*)	Input/Output of Left DAC3 *	I/O(Analog)	None	16
PORT-F_R (HP*)	Input/Output of Right DAC3 *	I/O(Analog)	None	17
CD-L	CD Audio Left Channel	I(Analog)	None	18
CD-G	CD Audio Analog Return	I(Analog)	None	19
CD-R	CD Audio Right Channel	I(Analog)	None	20
PORT-B_L	Input/Output of Left DAC2	I/O(Analog)	None	21
PORT-B_R	Input/Output of Right DAC2	I/O(Analog)	None	22
PORT-C_L	Input/Output of Left DAC1	I/O(Analog)	None	23
PORT-C_R	Input/Output of Right DAC1	I/O(Analog)	None	24
AVDD1	Analog Vdd = 5.0 V	I(Analog)	None	25
AVSS1	Analog Ground	I(Analog)	None	26
VREF_FILT	Analog Virtual Ground	O(Analog)	None	27
VREFOUT-B	Reference Voltage out drive (intended for mic bias) for Port B	O(Analog)	None	28
VREFOUT-C	Reference Voltage out drive (intended for mic bias) for Port C	O(Analog)	None	29
AFILT1	Anti-Aliasing Filter Cap, ADC left channel	O(Analog)	None	30
AFILT2	Anti-Aliasing Filter Cap, ADC right channel	O(Analog)	None	31

Pin Name	Pin Function	I/O	Internal Pull-up /Pull-down	Pin Location
VREFOUT-D	Reference Voltage out drive (intended for mic bias) for Port D	O(Analog)	None	32
CAP2	ADC reference Cap	O(Analog)	None	33
Sense B	Jack Insertion Detection Port E, F, G, H	I(Analog)	None	34
PORT-D_L (HP*)	Input/Output of Left DAC0	I/O(Analog)	None	35
PORT-D_R (HP*)	Input/Output of Right DAC0	I/O(Analog)	None	36
VREFOUT-A	Reference Voltage Out drive (intended for microphone bias) for Port A	O(Analog)	None	37
AVDD2	Analog Vdd = 5.0 V	I(Analog)	None	38
PORT-A_L (HP*)	Input/Output of Left DAC0	I/O(Analog)	None	39
NC	No Connect	N/C	None	40
PORT-A_R (HP*)	Input/Output of Right DAC0	I/O(Analog)	None	41
AVSS3	Analog Ground	I(Analog)	None	42
NC	No Connect	O(Digital)	None	43
GPIO2 / LR_CLK	General Purpose I/O tied to AVDD50K internal pull-up to AVddgnda OR LR_CLK	I/O(Digital)	Pull-up 50 KΩ or more	44
GPIO0 / SDATA	General Purpose I/O tied to AVDD50K internal pull-up to AVddgnda OR SDATA	I/O(Digital)	Pull-up 50 KΩ or more	45
GPIO1 / SCLK	General Purpose I/O tied to AVDD50K internal pull-up to AVddgnda OR SCLK	I/O(Digital)	Pull-up 50 KΩ or more	46
GPIO3 / SPDIFIN / EAPD	General Purpose I/O OR SPDIF Input OR EAPD	I/O(Digital)	Pull-up 50 KΩ or more	47
SPDIF-OUT	SPDIF digital output/	O(Digital)	None	48

\*Port F (pins 16 & 17) can drive 32 ohm headphones, but is designed to provide less power than the headphone amplifiers on ports A (pins 39 & 41) and D (pins 35 & 36).

## 10. PACKAGE OUTLINE AND PACKAGE DIMENSIONS

Package dimensions are kept current with JEDEC Publication No. 95

### 10.1. 48-Pin LQFP

Figure 5. 48-Pin LQFP Package Outline and Package Dimensions

Key	LQFP Dimensions in mm		
	Min	Nom	Max
A	1.40	1.50	1.60
A1	0.05	0.10	0.15
A2	1.35	1.40	1.45
D	8.80	9.00	9.20
D1	6.90	7.00	7.10
E	8.80	9.00	9.20
E1	6.90	7.00	7.10
L	0.45	0.60	0.75
e		0.50	
C	0.09	-	0.20
b	0.17	0.22	0.27

## 11. SOLDER REFLOW PROFILE

### 11.1. Standard Reflow Profile Data

Note: These devices can be hand soldered at 360 °C for 3 to 5 seconds.

**FROM:** IPC / JEDEC J-STD-020C "Moisture/Reflow Sensitivity Classification for Nonhermetic Solid State Surface Mount Devices" ([www.jedec.org/download](http://www.jedec.org/download)).

Profile Feature	Pb Free Assembly
Average Ramp-Up Rate ( $T_{S_{max}} - T_p$ )	3 °C / second max
Preheat	Temperature Min ( $T_{S_{min}}$ ) Temperature Max ( $T_{S_{max}}$ ) Time ( $t_{S_{min}} - t_{S_{max}}$ )
Time maintained above	Temperature ( $T_L$ ) Time ( $t_L$ )
Peak / Classification Temperature ( $T_p$ )	See "Package Classification Reflow Temperatures" on page 166.
Time within 5 °C of actual Peak Temperature ( $t_p$ )	20 - 40 seconds
Ramp-Down rate	6 °C / second max
Time 25 °C to Peak Temperature	8 minutes max

**Note:** All temperatures refer to topside of the package, measured on the package body surface.

Figure 6. Solder Reflow Profile

## 11.2. Pb Free Process - Package Classification Reflow Temperatures

Package Type	MSL	Reflow Temperature
LQFP 48-pin	3	260 + 0 °C*

IDT's package thickness is <2.5mm and package volumes are <350 mm<sup>3</sup>, so 260 °C applies in every case.

## 12. REVISION HISTORY

Revision	Date	Description of Change
1.0	9 November 2006	Initial release.
1.1	14 November 2006	Update Device ID numbers.
1.2	20 November 2006	Remove erroneous reference to ADAT in Widget List. Remove erroneous reference to 3.3 V analog operation. Deleted Figure 3, which erroneously showed 3.3 V operation.
