## 3V Enhanced CMOS Quad Differential Line Receiver

### General Description

The DS26LV32A is a high speed quad differential CMOS receiver that meets the requirements of both TIA/EIA-422-B and ITU-T V.11. The CMOS DS26LV32AT features typical low static  $I_{CC}$  of 9 mA which makes it ideal for battery powered and power conscious applications. The TRI-STATE® enables, EN and EN\*, allow the device to be active High or active Low. The enables are common to all four receivers.

The receiver output (RO) is guaranteed to be High when the inputs are left open. The receiver can detect signals as low as  $\pm 200$  mV over the common mode range of  $\pm 10$ V. The receiver outputs (RO) are compatible with TTL and LVCMOS levels.

### Features

- Low Power CMOS design (30 mW typical)
- Interoperable with existing 5V RS-422 networks
- Industrial and Military Temperature Range
- Conforms to TIA/EIA-422-B (RS-422) and ITU-T V.11 Recommendation
- 3.3V Operation
- $\pm 7$ V Common Mode Range @  $V_{ID} = 3$ V
- $\pm 10$ V Common Mode Range @  $V_{ID} = 0.2$ V
- Receiver OPEN input failsafe feature
- Guaranteed AC Parameter:
  - Maximum Receiver Skew: 4 ns
  - Maximum Transition Time: 10 ns
- Pin compatible with DS26C32AT
- 32 MHz Toggle Frequency
- > 6.5k ESD Tolerance (HBM)
- Available in SOIC and Cerpack Packaging
- Standard Microcircuit Drawing (SMD) 5962-98585

**Note 1:** "Absolute Maximum ratings" are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" specifies conditions of device operation.

**Note 2:** Current into device pins is defined as positive. Current out of device pins is defined as negative. All voltages are referenced to ground except  $V_{ID}$ .

**Note 3:** All typicals are given for:  $V_{CC} = +3.3V$ ,  $T_A = +25^\circ C$ .

**Note 4:** Short one output at a time to ground. Do not exceed package.

**Note 5:**  $t_{SK1}$  is the  $|t_{PHL} - t_{PLH}|$  of a channel.

**Note 6:**  $t_{SK2}$  is the maximum skew between any two channels within a device, either edge.

**Note 7:**  $t_{SK3}$  is the difference in propagation delay times between any channels of any devices. This specification (maximum limit) applies to devices within  $V_{CC} \pm 0.1V$  of one another, and a Delta  $T_A = \pm 5^\circ C$  (between devices) within the operating temperature range. This parameter is guaranteed by design and characterization.

**Note 8:** All channels switching, Output Duty Cycle criteria is 40%/60% measured at 50%. Input = 1V to 2V, 50% Duty Cycle,  $t_r/t_f \leq 5 \text{ ns}$ . This parameter is guaranteed by design and characterization.

**Note 9:** This parameter does not meet the TIA/EIA-422-B specification.

## Typical Application Information

General application guidelines and hints for differential drivers and receivers may be found in the following application notes:

AN-214, AN-457, AN-805, AN-847, AN-903, AN-912, AN-916

Power Decoupling Recommendations:

Bypass caps must be used on power pins. High frequency ceramic (surface mount is recommended) 0.1  $\mu\text{F}$  in parallel with 0.01  $\mu\text{F}$  at the power supply pin. A 10  $\mu\text{F}$  or greater solid tantalum or electrolytic should be connected at the power entry point on the printed circuit board.

$R_T$  is optional although highly recommended to reduce reflection

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
