

DS64EV100 Programmable Single Equalizer

General Description

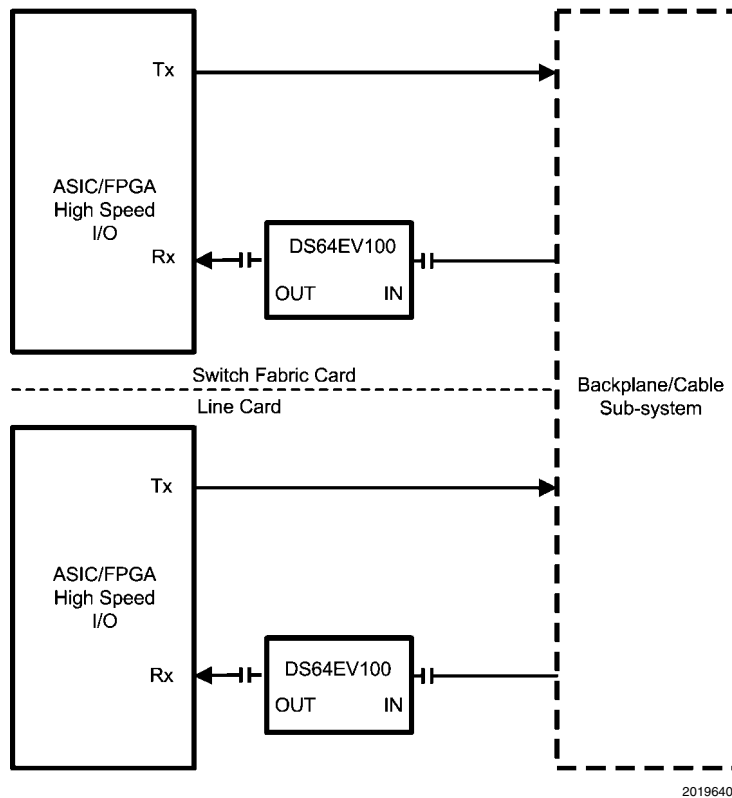

The DS64EV100 programmable equalizer provides compensation for transmission medium losses and reduces the medium-induced deterministic jitter for NRZ data channel. The DS64EV100 is optimized for operation up to 10 Gbps for both cables and FR4 traces. The equalizer channel has eight levels of input equalization that can be programmed by three control pins.

The equalizer supports both AC and DC-coupled data paths for long run length data patterns such as PRBS-31, and balanced codes such as 8b/10b. The device uses differential current-mode logic (CML) inputs and outputs. The DS64EV100 is available in a 3 mm x 4 mm 14-pin leadless LLP package. Power is supplied from either a 2.5V or 3.3V supply.

Features

- Equalizes up to 24 dB loss at 10 Gbps
- Equalizes up to 22 dB loss at 6.4 Gbps
- 8 levels of programmable equalization
- Operates up to 10 Gbps with 30" FR4 traces
- Operates up to 6.4 Gbps with 40" FR4 traces
- 0.175 UI residual deterministic jitter at 6.4 Gbps with 40" FR4 traces
- Single 2.5V or 3.3V power supply
- Supports AC or DC-Coupling with wide input common-mode
- Low power consumption: 100 mW Typ at 2.5V
- Small 3 mm x 4 mm 14-pin LLP package
- > 8 kV HBM ESD Rating
- -40 to 85°C operating temperature range

 See NS Package Number SQA14A

Ordering Information

NSID	Package Type, Qty Size	Package ID
DS64EV100SD	14-pin LLP (3 mm x 4 mm x 0.8 mm, 0.5 mm pitch, reel of 1000)	SDA14A
DS64EV100SDX	14-pin LLP (3 mm x 4 mm x 0.8 mm, 0.5 mm pitch, reel of 4500)	SDA14A

Pin Descriptions

Pin Name	Pin #	I/O, Type	Description
HIGH SPEED DIFFERENTIAL I/O			
IN+	3	I, CML	Inverting and non-inverting CML differential inputs to the equalizer. An on-chip 100Ω terminating resistor is connected between IN+ and IN-. Refer to Figure 4.
IN-	4		
OUT+	12	O, CML	Inverting and non-inverting CML differential outputs from the equalizer. An on-chip 50Ω terminating resistor connects OUT+ to V _{DD} and OUT- to V _{DD} .
OUT-	11		
EQUALIZATION CONTROL			
BST_2	14	I, CMOS	BST_2, BST_1, and BST_0 select the equalizer strength. BST_2 is internally pulled high. BST_1 and BST_0 are internally pulled low.
BST_1	7		
BST_0	8		
POWER			
V _{DD}	5	I, Power	V _{DD} = 2.5V ±5% or 3.3V ±10%. V _{DD} pins should be tied to V _{DD} plane through low inductance path. A 0.01μF bypass capacitor should be connected between each V _{DD} pin to GND planes.
GND	2, 6, 9, 10, 13	I, Power	Ground reference. GND should be tied to a solid ground plane through a low impedance path.
DAP	PAD	I, Power	Ground reference. The exposed pad at the center of the package must be connected to ground plane of the board.
OTHER			
NC	1		Reserved. Do not connect.

Note: I = Input, O = Output

<p>Note 1: "Absolute Maximum Ratings" indicate limits beyond which damage to the device may occur, including inoperability and degradation of device reliability and/or performance. Functional operation of the device and/or non-degradation at the Absolute Maximum Ratings or other conditions beyond those indicated in the Recommended Operating Conditions is not implied. The Recommended Operating Conditions indicate conditions at which the device is functional and the device should not be operated beyond such conditions. Absolute Maximum Numbers are guaranteed for a junction temperature range of -40°C to +125°C. Models are validated to Maximum Operating Voltages only.</p> <p>Note 2: Typical values represent most likely parametric norms at $V_{DD} = 3.3V$ or $2.5V$, $T_A = 25^\circ C$., and at the Recommended Operation Conditions at the time of product characterization and are not guaranteed.</p> <p>Note 3: The Electrical Characteristics tables list guaranteed specifications under the listed Recommended Operating Conditions except as otherwise modified or specified by the Electrical Characteristics Conditions and/or Notes. Typical specifications are estimations only and are not guaranteed.</p> <p>Note 4: Allowed supply noise (mV_{P-P} sine wave) under typical conditions.</p> <p>Note 5: Specification is guaranteed by characterization at optimal boost setting and is not tested in production.</p> <p>Note 6: Deterministic jitter is measured at the differential outputs (point C of Figure 1), minus the deterministic jitter before the test channel (point A of Figure 1). Random jitter is removed through the use of averaging or similar means.</p> <p>Note 7: Measured with clock-like {11111 00000} pattern.</p> <p>Note 8: Random jitter contributed by the equalizer is defined as $\sqrt{(J_{OUT})^2 - (J_{IN})^2}$. J_{OUT} is the random jitter at equalizer outputs in ps_{rms}, see point C of Figure 1; J_{IN} is the random jitter at the input of the equalizer in ps_{rms}, see Figure 1.</p> <p>Note 9: The $V_{DD2.5}$ is $V_{DD} = 2.5V \pm 5\%$ and $V_{DD3.3}$ is $V_{DD} = 3.3V \pm 10\%$.</p>

DS64EV100 Applications Information

The DS64EV100 is a programmable equalizer optimized for operation up to 10 Gbps for backplane and cable applications.

The equalizer channel consists of an equalizer stage, a limiting amplifier, a DC offset correction block, and a CML driver as shown in Figure 5.

20196406

FIGURE 5. Simplified Block Diagram

EQUALIZER BOOST CONTROL

The equalizer channel supports eight programmable levels of equalization boost, and is controlled by the Boost Set pins (BST_[2:0]) in accordance with Table 1. The eight levels of boost settings enables the DS64EV100 to address a wide range of media loss and data rates.

TABLE 1. EQ Boost Control Table

6 mil Microstrip FR4 Trace Length (in)	24 AWG Twin-AX Cable Length (m)	Channel Loss at 3.2 GHz (db)	Channel Loss at 5 GHz (dB)	BST_N [2, 1, 0]
0	0	0	0	0 0 0
5	2	5	6	0 0 1
10	3	7.5	10	0 1 0
15	4	10	14	0 1 1
20	5	12.5	18	1 0 0 (Default)
25	6	15	21	1 0 1
30	7	17	24	1 1 0
40	10	22	30	1 1 1

GENERAL RECOMMENDATIONS

The DS64EV100 is a high performance circuit capable of delivering excellent performance. Careful attention must be paid to the details associated with high-speed design as well as providing a clean power supply. Refer to the LVDS Owner's Manual for more detailed information on high-speed design tips to address signal integrity design issues.

PCB LAYOUT CONSIDERATIONS FOR DIFFERENTIAL PAIRS

The CML inputs and outputs must have a controlled differential impedance of 100Ω. It is preferable to route CML lines

exclusively on one layer of the board, particularly for the input traces. The use of vias should be avoided if possible. If vias must be used, they should be used sparingly and must be placed symmetrically for each side of a given differential pair. Route the CML signals away from other signals and noise sources on the printed circuit board. See AN-1187 for additional information on LLP packages.

POWER SUPPLY BYPASSING

Two approaches are recommended to ensure that the DS64EV100 is provided with an adequate power supply. First, the supply (V_{DD}) and ground (GND) pins should be connected to power planes routed on adjacent layers of the printed circuit board. The layer thickness of the dielectric should be minimized so that the V_{DD} and GND planes create a low inductance supply with distributed capacitance. Second, careful attention to supply bypassing through the proper use of bypass capacitors is required. A 0.01μF bypass capacitor should be connected to each V_{DD} pin such that the capacitor is placed as close as possible to the DS64EV100. Smaller body size capacitors can help facilitate proper component placement. Additionally, three capacitors with capacitance in the range of 2.2 μF to 10 μF should be incorporated in the power supply bypassing design as well. These capacitors can be either tantalum or an ultra-low ESR ceramic and should be placed as close as possible to the DS64EV100.

DC COUPLING

The DS64EV100 supports both AC coupling with external ac coupling capacitor, and DC coupling to its upstream driver, or downstream receiver. With DC coupling, users must ensure the input signal common mode is within the range of the electrical specification V_{ICMDC} and the device output is terminated with 50 Ω to V_{DD} .
