

Description

- The CP2103 is a highly-integrated USB-to-UART bridge controller providing a simple solution for updating RS-232 or RS-485 designs to USB using a minimum of components and PCB space. The CP2103 is a functional upgrade to CP2101/2 with new features such as configurable I/O levels (3.3 to 1.8 V) and four general purpose I/O signals for system status and control.

It includes the standard USB 2.0 full-speed function controller, USB transceiver, oscillator, EEPROM and asynchronous serial data bus (UART) with full modem control signals in a compact 5 x 5 mm MLP-28 package. No other external USB components are required.
