

## ANALOG FUNCTION SWITCH

### ■ GENERAL DESCRIPTION

The NJU7311A is a hexad 2-channel and dual 1-channel analog function switch, especially suitable for input selector of audio equipments.

The high break down voltage analog switch controlled by 14-bit serial data based on logic operating voltage (5V) can ON and OFF of  $\pm 15V$  signal.

The analog switch is realized superior linearity of on-resistance in all voltage range, low distortion and wide dynamic range.

Furthermore, the both of single and dual power supply application provides easy designing.

**■ FUNCTIONAL DESCRIPTION**

## (1) Timing of DATA, CK, ST

The Serial Input Data is input to internal shift register sequentially synchronized by clock signal rising edge input from CK terminal (100 kHz max.).

The Serial Input Data in the shift register is transferred to latch circuit and renew by synchronized rising edge of Chip enable signal input from ST terminal.

## (2) Data Format

The 14-bit serial data strings format from MSB to LSB are 8-bit analog switch control data, 2-bit right and left channel selection data and 4-bit address data.

## (Switch)

Bit1 ~ bit7 select the analog switch ON and OFF   0: switch off  
1: switch on

Bit8 is invalidity due to no correspond analog switch.

## (Channel)

Bit9 and 10 select the channel.

bit9	bit10	CHANNEL
1	1	L and R
1	0	R only
0	1	L only

## (Address)

Bit11 to 14 select the address. This address select is used for chip selection when this LSI is connected to the common bus line.

NJU7312A	1	0	0	0
NJU7313A	0	1	0	0

## (3) Supply Voltage

The power supply of NJU7311A is divided into two portions of analog switch part and control part. The analog switch part operate by dual power supply (+ and -) and control part is operated by single power supply (+) only.

The analog switch part can be also operated by single power supply. In this case, the supply voltage should be half of dual supply operation mode.

Furthermore, the CK, DATA and ST terminals realize direct interface with 5V operated family because of its input threshold level is adjusted.
