

C-MOS QUAD ANALOG SWITCH
GENERAL DESCRIPTION

The NJU4066B is a quad bilateral analog switches, which are controlled by independent control signals.

The analog switch is ON during the control signal is "H", and OFF during it is "L".

The low on-state resistance and superior transfer characteristics permit input of wide voltage range, consequently it is suitable for analog and digital signal switching, chopper-modulator-demodulator and others.

The NJU4066B is functionally and pin-to-pin compatible with RCA CD4066B and Motorola MC14066B.

NJU4066BD

NJU4066BM

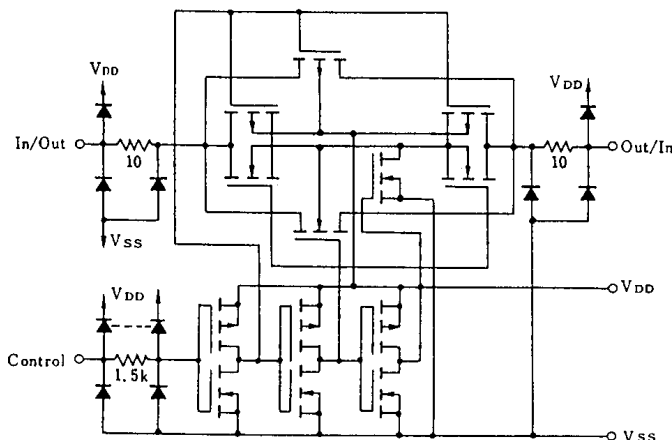

NJU4066BV

PIN CONFIGURATION

FEATURES

- 4 Independent Bilateral Analog Switches
- Low On-state Resistance
- Package Outline -- DIP/DMP/SSOP 14
- C-MOS Technology

TERMINAL DESCRIPTION
