

20+20W STEREO AMPLIFIER WITH STAND-BY

- WIDE SUPPLY VOLTAGE RANGE
- HIGH OUTPUT POWER
28+28W TYP. MUSIC POWER
20+20W @ THD = 10%, $R_L = 4\Omega$, $V_S = 28V$
- HIGH CURRENT CAPABILITY (UP TO 3.5A)
- STAND-BY FUNCTION
- AC SHORT CIRCUIT PROTECTION
- THERMAL OVERLOAD PROTECTION

DESCRIPTION

The TDA7262 is class AB dual Hi-Fi Audio power amplifier assembled in Multiwatt package, specially designed for high quality stereo application as Hi-Fi music centers and TV sets.

APPLICATION SUGGESTION

The recommended values of the components are those shown on application circuit of Figure 1. Different values can be used; the following table can help the designer.

Component	Recomm. Value	Purpose	Larger than	Smaller than
R1 and R3	1.3K Ω	Close loop gain setting (*)	Increase of gain	Decrease of gain
R2 and R4	18 Ω		Decrease of gain	Increase of gain
R5 and R6	1 Ω	Frequency stability	Danger of oscillations	
C1 and C2	2.2 μ F	Input DC decoupling	higher turn-on delay	- worse turn-ON pop - higher low freq. cutoff. Increase of noise
C3	22 μ F (**)	- Ripple rejection - Stand-by time constant	Increase of the Switch-on time	- Degradation of SVR - worse turn-OFF pop by stand-by
C4	100nF	Supply setting		Danger of oscillations
C5	1000 μ F	Supply setting		worse turn-OFF pop
C6 and C7	220 μ F	Feedback input DC decoupling		
C8 and C9	0.1 μ F	Frequency stability		Danger of oscillations
C10 and C11	1000 μ F to 2200 μ F	Output DC decoupling		Higher low-frequency cut-off

(*) Closed loop gain must be higher than 26dB.

(**) 220 μ F in case of stand-by utilization.

BUILD-IN PROTECTION SYSTEMS

Thermal shut-down

The presence of a thermal limiting circuit offers the following advantages:

- 1) an overload on the output (even if it is permanent), or an excessive ambient temperature can be easily withstood.
- 2) the heatsink can have a smaller factor of safety compared with that of a conventional circuit. There is no device damage in the case of excessive junction temperature; all that happens is that P_O (and therefore P_{tot}) and I_O are reduced. The maximum allowable power dissipation depends upon the size of the external heatsink (i.e. its thermal resistance); Figure 12 shows this dissipable power as a function of ambient temperature for different thermal resistance.

Short circuit (AC Conditions)

The TDA7262 can withstand accidental short circuits across the speaker made by a wrong connection during normal play operation.

MOUNTING INSTRUCTIONS

The power dissipated in the circuit must be removed by adding an external heatsink.

Thanks to the MULTIWATT package attaching the heatsink is very simple, a screw or a compression spring (clip) being sufficient. Between the heatsink and the package it is better to insert a layer of silicon grease, to optimize the thermal contact; no electrical isolation is needed between the two surfaces.
