

Car radio signal processor**Features**

- 4 stereo inputs
- 1 mono input
- Soft-step volume
- Bass, Treble and Loudness control
- Direct-mute and soft-mute
- Internal beep
- Four independent speaker outputs
- Subwoofer stereo output
- Digital control:
 - I²C bus interface
 - Audio filter characteristics programmable

Description

The TDA7404 is a high performance signal processor specifically designed for car radio applications.

The device includes a high performance audioprocessor with fully integrated audio filters. The digital control allows a programming in a wide range of all the filter characteristics. By the use of a BiCMOS process and a linear signal processing low distortion and low noise are obtained.

1 Detailed features

- Input multiplexer
 - 1 pseudo-differential stereo input (selectable single end stereo input)
 - 3 single-end stereo inputs
 - 1 differential mono input
 - In-Gain 0..14 dB, 1 dB steps, 14..20 dB, 2 dB steps
 - Auto Zero
- Beep
 - internal beep with 3 frequencies
 - 781 Hz/1.56 kHz/1.8 kHz
- Mixing stage
 - 4 step-mixing-stage with mono or beep as mix-signals
- Loudness
 - second order frequency response
 - programmable center frequency
 - 15 x 1 dB steps
 - selectable low and high frequency boost
 - selectable flat-mode (constant attenuation)
- Volume
 - 1 dB attenuator
 - 100 dB range
 - soft-step control with programmable times
- Bass
 - 2nd order frequency response
 - center frequency programmable in 4 steps
 - 60 Hz / 80 Hz / 100 Hz / 200 Hz
 - Q programmable 1.0/1.25/1.5/2.0
 - DC gain programmable
 - ± 15 dB x 1 dB steps
- Treble
 - 2nd order frequency response
 - center frequency programmable in 4 steps
 - 10 kHz / 12.5 kHz / 15 kHz / 17.5 kHz
 - ± 15 dB x 1 dB steps
- Speaker
 - 4 independent speaker controls in 1 dB steps
 - control range 50 dB with mute
 - Zero crossing attenuate
- Subwoofer
 - Stereo output
 - attenuator range 50 dB
- Mute functions
 - direct mute
 - digitally controlled Soft Mute with 4 programmable mute-times

		$A_V = -20$ to -60 dB	-2	0	2	dB

1. The SM-Pin is active low (Mute = 0).

2. Center frequency 2.4 kHz makes 1kHz bottom frequency at low and high frequency boost condition.

4 Description of functionality

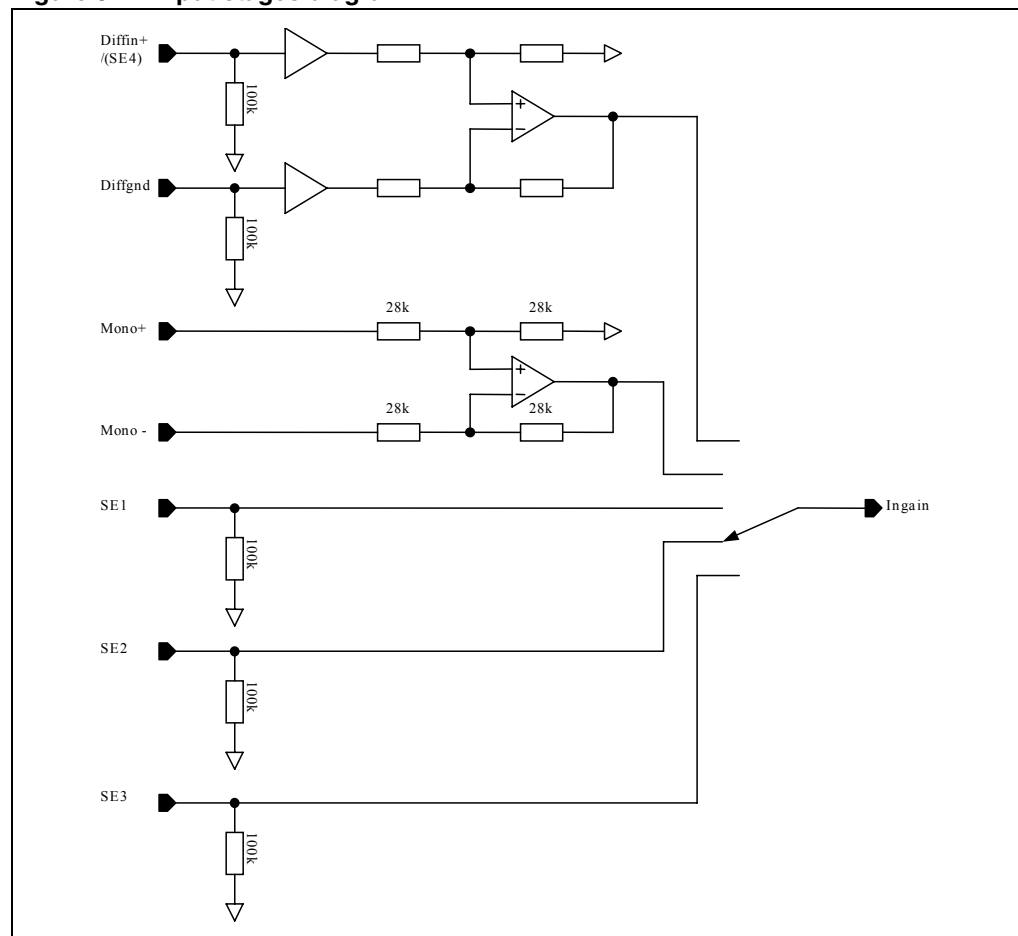

4.1 Input stages

Most of the input stages have remained the same as in preceding ST-Audioprocessors with exception of the CD-inputs (see [Figure 3](#)). In the meantime there are some CD-players in the market which have a significant high source-impedance which effects strongly the common-mode-rejection of the normal differential input stage.

The additional buffer of the TDA7404 Diff:

- input avoids this drawback and offers the full common-mode-rejection even with those CD-players.

Figure 3. Input stages diagram

1. It is possible that the Differential input is switched a single ended input (SE4) like SE1.. 3.

4.2 AutoZero

In order to reduce the number of pins there is no AC coupling between the In-Gain and the following stage, so that any offset generated by or before the In-Gain-stage would be transferred or even amplified to the output. To avoid that effect a special Offset-cancellation-stage called AutoZero is implemented. This stage is located before the Mixing-block to eliminate all offsets generated by the Input-Stages and the In-Gain (Please notice that externally generated offsets, e.g. generated through the leakage current of the coupling capacitors, are not canceled).

The auto-zeroing is started every time the DATA-BYTE 0 (Input Selector/Gain) is selected and takes a time of max. **0.3ms**. To avoid audible clicks the Audioprocessor is muted before the loudness stage during this time.

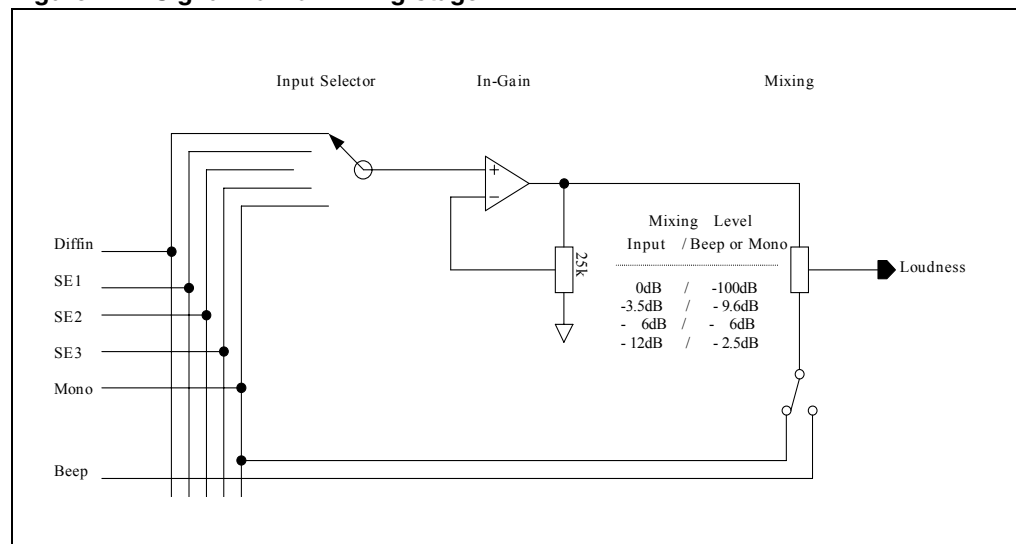

4.2.1 AutoZero remain

In some cases, for example if the μP is executing a refresh cycle of the IIC-Bus-programming, it is not useful to start a new AutoZero-action because no new source is selected and an undesired mute would appear at the outputs. For such applications the TDA7404 could be switched in the **AutoZero-Remain-Mode** (I2 bit of the subaddress-byte). If this bit is set to high, the DATABYTE 0 could be loaded without invoking the AutoZero and the old adjustment-value remains.

4.3 Mixing stage

The 4 step Mixing stage offers the possibility to mix the rear selector signal or the phone signal to any other source. Due to the fact that the mixing-stage is located behind the In-Gain-stage fine adjustments of the main source level could be done in this way.

Figure 4. Signal-flow of mixing-stage

4.4 Loudness

There are four parameters programmable in the loudness stage:

4.4.1 Attenuation

Figure 5 shows the attenuation as a function of frequency at $f_C = 400$ Hz.

Figure 5. Loudness attenuation @ $f_C = 400$ Hz

4.4.2 Center frequency

Figure 6 shows the three possible peak-frequencies 400 Hz, 800 Hz and 2.4 kHz.

Figure 6. Loudness center frequencies @ Attn. = 15 dB

4.4.3 Low and high frequency boost

Figure 7 shows the different Loudness-shapes in low & high frequency boost.

Figure 7. Loudness attenuation, $f_C = 2.4$ kHz

4.5 Soft-mute

The digitally controlled soft-mute stage allows muting/demuting the signal with a I^2C bus programmable slope. The mute process can either be activated by the Mute pin or by the I^2C bus. This slope is realized in a special S-shaped curve to mute slow in the critical regions (see Figure 6).

For timing purposes the Bit 0 of the I^2C bus output register is set to 1 from the start of muting until the end of de-muting.

Figure 8. Soft-mute timing

1. Please notice that a started Mute-action is always terminated and could not be interrupted by a change of the mute -signal.

4.6 Soft-step volume

When the volume-level is changed audible clicks could appear at the output. The root cause of those clicks could either be a DC-Offset before the volume-stage or the sudden change of the envelope of the audiosignal. With the soft-step feature both kinds of clicks could be reduced to a minimum and are no more audible. Four programmable soft step time from one step to the next, are user selectable.

Figure 9. Soft-step timing

1. For steps more than 1 dB the soft-step mode should be deactivated because it could generate a 1 dB error during the blend-time.

4.7 Bass

There are three parameters programmable in the bass stage:

4.7.1 Attenuation

Figure 10 shows the attenuation as a function of frequency at a center frequency of 80Hz.

Figure 10. Bass control @ $f_c = 80$ Hz, $Q = 1$

4.7.2 Center frequency

Figure 11 shows the four possible center frequencies 60, 80, 100 and 200 Hz.

Figure 11. Bass center frequencies @ gain = 15 dB, Q = 1

4.7.3 Quality factors

Figure 12 shows the four possible quality factors 1, 1.25, 1.5 and 2.

Figure 12. Bass quality factors @ gain = 14 dB, $f_C = 80$ Hz

4.7.4 DC mode

In this mode the DC-gain is increased by 4.4 dB. In addition the programmed center frequency and quality factor is decreased by 25 % which can be used to reach alternative center frequencies or quality factors.

Figure 13. Bass normal and DC mode @ gain = 14 dB, $f_c = 80$ Hz

1. The center frequency, Q and DC mode can be set fully independently.

4.8 Treble

There are two parameters programmable in the treble stage:

4.8.1 Attenuation

Figure 14 shows the attenuation as a function of frequency at a center frequency of 17.5 kHz.

Figure 14. Treble control @ $f_c = 17.5\text{kHz}$

4.8.2 Center frequency

Figure 15 shows the four possible center frequencies 10 k, 12.5 k, 15 k and 17.5 kHz.

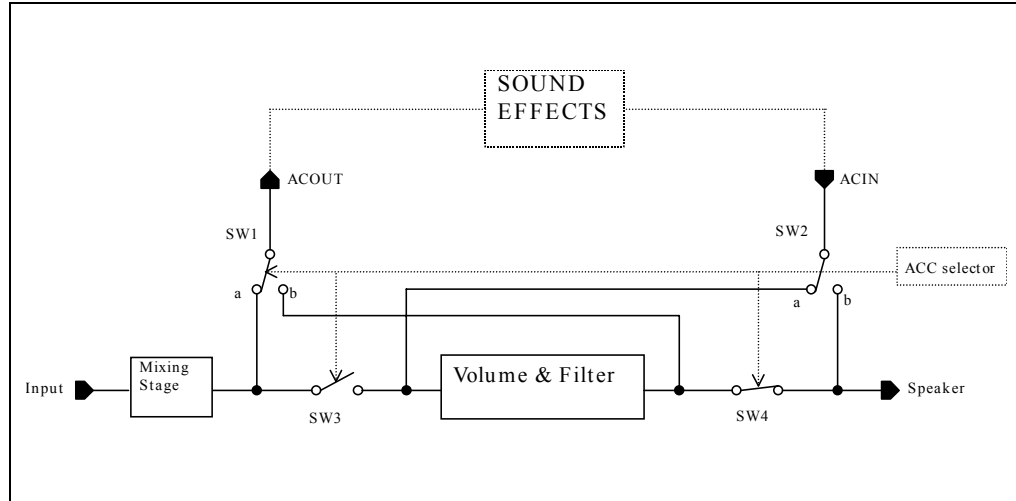

Figure 15. Treble center frequencies @ Gain = 15 dB

4.9 External AC - coupling

TDA7404 has external AC coupling terminals which can be selected one of two positions behind the mixing stage or bass filter.

Figure 16. External AC coupling

The external AC coupling is selected in position of four switches controlled by the lower 2bit in the Others selection (see [Table 6](#)).

Table 6. Others selection

D1	D0	Switch position
X	0	SW3 = ON, SW4 = ON (selected internal pass), SW1 = b, SW2 = open
0	1	SW3 = OFF, SW4 = ON, SW1 = a, SW2 = a
1	1	SW3 = ON, SW4 = OFF, SW1 = b, SW2 = b

4.10 Speaker attenuator

Due to practical aspects the steps in the speaker-attenuator are not linear over the full range. At attenuations more than 24 dB the steps increase from 1.5 dB to 10 dB (please see data byte specification).

4.11 Subwoofer attenuator

The Subwoofer output is a single ended stereo output. The attenuator is exactly the same like the other speakers.

5 I²C bus interface

5.1 Interface protocol

The interface protocol comprises:

- a start condition (S)
- a chip address byte (the LSB bit determines read / write transmission)
- a subaddress byte
- a sequence of data (N-bytes + acknowledge)
- a stop condition (P)
- the max. clock speed is 500 Kbits/s

Figure 17. Software specification

S = Start

R/W = "0" -> Receive-Mode (Chip could be programmed by P)
 "1" -> Transmission-Mode (Data could be received by P)

ACK = Acknowledge

P = Stop

5.2 Transmitted data (send mode)

MSB							LSB
X	X	X	X	X	X	X	SM

SM = Soft mute activated
 X = Not Used

The transmitted data is automatic updated after each ACK. Transmission can be repeated without new chipaddress.

5.3 Reset condition

A Power on reset is invoked if the supply voltage is below than 3.5V. After that the following data is written automatically into the registers of all subaddresses:

MSB							LSB
1	1	1	1	1	1	1	0

The programming after POR is marked bold-face / underlined in the programming tables.

With this programming all the outputs are muted to V_{REF} ($V_{OUT} = V_{DD}/2$).

Note: All the blank bits in the following tables are "don't care"-bits.

5.4 Subaddress (receive mode)

Table 7. Subaddress (receive mode)

MSB				LSB				Function
I ₃	I ₂	I ₁	I ₀	A ₃	A ₂	A ₁	A ₀	
0 1								Zero cross / Soft Mute ⁽¹⁾ Zero Cross available Soft Mute available
	0 1							AutoZero Remain ⁽²⁾ off on
		0 1						Testmode ⁽³⁾ off on
			0 1					Auto-Increment Mode ⁽⁴⁾ off on
				0	0	0	0	Input Selector / Gain
				0	0	0	1	Loudness
				0	0	1	0	Volume
				0	0	1	1	Treble
				0	1	0	0	Bass
				0	1	0	1	Speaker attenuator LF / Bass Fc select
				0	1	1	0	Speaker attenuator RF
				0	1	1	1	Speaker attenuator LR
				1	0	0	0	Speaker attenuator RR
				1	0	0	1	Subwoofer attenuator LSW
				1	0	1	0	Subwoofer attenuator RSW
				1	0	1	1	Soft-mute / Mixing
				1	1	0	0	Others selection
				1	1	0	1	Testing

1. For more information see [Section 4.5: Soft-mute](#).

2. For more information see [Section 4.2: AutoZero](#)

3. For more information see Test Programming block

4. If this bit is set to "1", the subaddress is automatically increased after the transmission of a data-byte.

Therefore a transmission of more than one byte without sending the new subaddress is possible.

5.5 Data byte specification

Table 8. Input selector / gain

MSB					LSB			Function

				0	0	0	0	Attenuation 0 dB
				0	0	0	1	-1 dB
				:	:	:	:	:
				1	1	1	0	-14 dB
				1	1	1	1	-15 dB
	0	0	0					Filter / Center Frequency off (flat) 'D6 must be = 0'
	0	0	1					400 Hz
		1	0					800 Hz
		1	1					2.4 kHz
	0							Shape Low boost
	1							Low and high boost
0								Soft-step-Volume off
1								on

Note 1: The attenuation is specified at high frequencies. Around the center frequency the value is different depending on the programmed attenuation (see [Section 4.4: Loudness](#)).

Table 10. Volume

MSB				LSB				Function
D ₇	D ₆	D ₅	D ₄	D ₃	D ₂	D ₁	D ₀	
	0	0	0	0	0	0	0	Gain/attenuation not allow
	0	0	0	0	0	0	1	not allow
	0	0	0	0	0	1	0	+30.0 dB
	0	0	0	0	0	1	1	+29.0 dB
								:
	0	0	1	1	1	1	1	+1.0 dB
	0	1	0	0	0	0	0	0.0 dB
	0	1	0	0	0	0	1	- 1.0 dB
	0	1	0	0	0	1	0	- 2.0 dB
								:
	1	1	0	1	1	1	0	-78.0 dB
	1	1	0	1	1	1	1	-79.0 dB
	1	1	1	X	X	X	X	Mute
0								Diffin - mode Single ended stereo
1								<u>Differential Stereo</u>

Note 2: It is not recommended to use a gain more than 20 dB for system performance reason. In general, the max. gain should be limited by software to the maximum value, which is needed for the system.

Table 11. Treble programming

MSB				LSB				Function
D ₇	D ₆	D ₅	D ₄	D ₃	D ₂	D ₁	D ₀	
				0	0	0	0	Treble Steps 15 dB
				0	0	0	1	14 dB
				0	0	1	0	13 dB
				0	0	1	1	12 dB
				0	1	0	0	11 dB
				0	1	0	1	10 dB
				0	1	1	0	9 dB
				0	1	1	1	8 dB
				1	0	0	0	7 dB
				1	0	0	1	6 dB
				1	0	1	0	5 dB
				1	0	1	1	4 dB
				1	1	0	0	3 dB
				1	1	0	1	2 dB
				1	1	1	0	1 dB
				1	1	1	1	0 dB
			0					Mode Cut
			1					Boost
X	0	0						Treble Center Frequency 10 kHz
X	0	1						12.5 kHz
X	1	0						15 kHz
X	1	1						17.5 kHz

Table 12. Bass programming

MSB				LSB				Function
D ₇	D ₆	D ₅	D ₄	D ₃	D ₂	D ₁	D ₀	
				0	0	0	0	Bass steps 15 dB
				0	0	0	1	14 dB
				0	0	1	0	13 dB
				0	0	1	1	12 dB
				0	1	0	0	11 dB
				0	1	0	1	10 dB
				0	1	1	0	9 dB
				0	1	1	1	8 dB
				1	0	0	0	7 dB
				1	0	0	1	6 dB
				1	0	1	0	5 dB
				1	0	1	1	4 dB
				1	1	0	0	3 dB
				1	1	0	1	2 dB
				1	1	1	0	1 dB
				1	1	1	1	0 dB
			0					Mode Cut
			1					Boost
	0	0						Quality Factor 1
	0	1						1.25
	1	0						1.5
	1	1						2
0								DC - Mode Off
1								On

Note 3: For more information please refer to [Section 4.7: Bass](#).

7 Package information

In order to meet environmental requirements, ST offers these devices in different grades of ECOPACK[®] packages, depending on their level of environmental compliance. ECOPACK[®] specifications, grade definitions and product status are available at: www.st.com.

ECOPACK[®] is an ST trademark.

8 Revision history

Table 21. Document revision history

Date	Revision	Changes
15-Jul-2003	1	Initial release.
16-Dec-2008		Document reformatted. Added Table 1: Device summary on page 1 . Updated Section 7: Package information .

Please Read Carefully:

Information in this document is provided solely in connection with ST products. STMicroelectronics NV and its subsidiaries ("ST") reserve the right to make changes, corrections, modifications or improvements, to this document, and the products and services described herein at any time, without notice.

All ST products are sold pursuant to ST's terms and conditions of sale.

Purchasers are solely responsible for the choice, selection and use of the ST products and services described herein, and ST assumes no liability whatsoever relating to the choice, selection or use of the ST products and services described herein.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted under this document. If any part of this document refers to any third party products or services it shall not be deemed a license grant by ST for the use of such third party products or services, or any intellectual property contained therein or considered as a warranty covering the use in any manner whatsoever of such third party products or services or any intellectual property contained therein.

UNLESS OTHERWISE SET FORTH IN ST'S TERMS AND CONDITIONS OF SALE ST DISCLAIMS ANY EXPRESS OR IMPLIED WARRANTY WITH RESPECT TO THE USE AND/OR SALE OF ST PRODUCTS INCLUDING WITHOUT LIMITATION IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE (AND THEIR EQUIVALENTS UNDER THE LAWS OF ANY JURISDICTION), OR INFRINGEMENT OF ANY PATENT, COPYRIGHT OR OTHER INTELLECTUAL PROPERTY RIGHT.

UNLESS EXPRESSLY APPROVED IN WRITING BY AN AUTHORIZED ST REPRESENTATIVE, ST PRODUCTS ARE NOT RECOMMENDED, AUTHORIZED OR WARRANTED FOR USE IN MILITARY, AIR CRAFT, SPACE, LIFE SAVING, OR LIFE SUSTAINING APPLICATIONS, NOR IN PRODUCTS OR SYSTEMS WHERE FAILURE OR MALFUNCTION MAY RESULT IN PERSONAL INJURY, DEATH, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE. ST PRODUCTS WHICH ARE NOT SPECIFIED AS "AUTOMOTIVE GRADE" MAY ONLY BE USED IN AUTOMOTIVE APPLICATIONS AT USER'S OWN RISK.

Resale of ST products with provisions different from the statements and/or technical features set forth in this document shall immediately void any warranty granted by ST for the ST product or service described herein and shall not create or extend in any manner whatsoever, any liability of ST.

ST and the ST logo are trademarks or registered trademarks of ST in various countries.

Information in this document supersedes and replaces all information previously supplied.

The ST logo is a registered trademark of STMicroelectronics. All other names are the property of their respective owners.
