

## FEATURES

- *Guaranteed* Maximum 0.5mV Input Offset Voltage
- Input Protection Diodes
- Operates From Single 5V Supply
- 25mA Drive Capability
- 80ns Response Time

## APPLICATIONS

- Window Detectors
- High Speed One Shot
- Relay/Lamp Drivers
- Voltage Controlled Oscillators

## DESCRIPTION

The LT<sup>®</sup>119A is an improved version of the LM119 dual comparator. It features lower input offset voltage and offset current, higher voltage gain, guaranteed common mode rejection and input protection diodes.

The LT119A is capable of operation over a supply range from 5V to  $\pm 15$ V and can drive 25mA loads from each open collector output. A separate ground pin allows the LT119A to isolate system grounds.

Linear Technology Corporation's advanced processing, design techniques and reliability make the LT119A/LT319A an ideal choice over previous devices in most comparator applications.

LT, LTC and LT are registered trademarks of Linear Technology Corporation.

## TYPICAL APPLICATION

\*ALLOWED WINDOW FOR SINGLE 5V SUPPLY IS 1.2V TO 3.8V

### Response Time for Various Input Overdrives

# LT119A/LT319A LM119/LM319

## ABSOLUTE MAXIMUM RATINGS (Note 1)

Supply Voltage .....	36V	Output Short-Circuit Duration .....	10s
Output to Negative Supply Voltage .....	36V	Operating Temperature Range	
Ground to Negative Supply Voltage .....	25V	LT119A, LM119 <b>OBsolete</b> .....	-55°C to 125°C
Ground to Positive Supply Voltage .....	18V	LT319A, LM319 .....	0°C to 70°C
Differential Input Voltage (Note 6) .....	±5V	Storage Temperature Range .....	-65°C to 150°C
Differential Input Current (Note 6) .....	±5mA	Lead Temperature (Soldering, 10 sec) .....	300°C
Input Voltage (Note 2)

	Input Voltage Range	$V_S = \pm 15\text{V}$	●		$\pm 13$			$\pm 13$	V
		$V^+ = 5\text{V}$ , $V^- = 0\text{V}$	●	1		3	1		3
	Differential Input Voltage		●		$\pm 5$			$\pm 5$	V
$I_S$	Supply Current	$V^+ = 5\text{V}$ , $V^- = 0\text{V}$		4.3			4.3		mA
	Positive Supply Current	$V_S = \pm 15\text{V}$		8	12.5		8	12.5	mA
	Negative Supply Current	$V_S = \pm 15\text{V}$		3	5		3	5	mA

**Note 1:** Absolute Maximum Ratings are those values beyond which the life of a device may be impaired.

**Note 2:** For supply voltages less than  $\pm 15\text{V}$ , the maximum input voltage is equal to the supply voltage.

**Note 3:** Unless otherwise noted, supply voltage equals  $\pm 15\text{V}$  and  $V_{CM} = 0\text{V}$ ,  $T_A = 25^\circ\text{C}$ . The ground pin is grounded. Note that the maximum voltage allowed between the ground pin and  $V^+$  is  $18\text{V}$ . Do not tie the ground pin to  $V^-$  when the power supply voltage exceeds  $\pm 9\text{V}$ . The offset voltage, offset current and bias current specifications apply for all supply voltages between  $\pm 15\text{V}$  and  $5\text{V}$  unless otherwise specified.

**Note 4:** The offset voltages and currents given are the maximum values required to drive the output within  $1\text{V}$  of either supply with a  $1\text{mA}$  load, thus these parameters define an error band and take into account the worst case effects of voltage gain and input impedance.

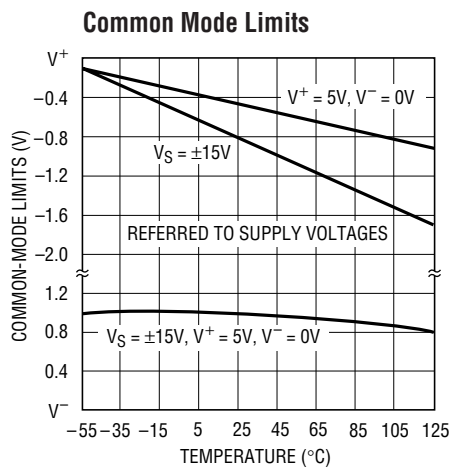

**Note 5:** Response time specified is for a  $100\text{mV}$  input step with  $5\text{mV}$  overdrive.

**Note 6:** Inputs are protected with back-to-back  $5.6\text{V}$  zener diodes. This limits maximum differential input voltage to  $\pm 5\text{V}$  if current is unlimited. Larger differential input drive is allowed if input current is limited to  $\pm 5\text{mA}$  with external resistance.
