## FMS6418A

## Triple Video Driver with Selectable HD／SD Video Filters for RGB or YUV Signals

## Features

－Three video anti－aliasing or reconstruction filters
－YUV／RGB signal support
－2：1 Mux inputs for multiple RGB／YUV inputs
－Selectable 8 MHz or 30 MHz 6th order filters for SD／HD applications
－DC coupled input，AC coupled output
－All outputs can drive AC coupled $150 \Omega$ loads and provide 6 dB of gain
－ $0.6 \%$ differential gain with $0.15^{\circ}$ differential phase
－ $36 \mathrm{~dB} /$ octave roll－off on all channels

## Applications

－Cable Set top boxes
－Satellite Set top boxes
－DVD players
－HDTV
－Personal Video Recorders（PVR）
－Video On Demand（VOD）

## Description

The FMS6418A offers comprehensive filtering for set top box or DVD applications．This part consists of a triple 6th order filter with selectable 30 MHz or 8.0 MHz frequencies．

A 2－to－1 multiplexer is provided on each filter channel．The triple filters are intended for either YUV or RGB signals．All channels accept DC coupled ground－referenced 1V signals． The filters provide 2 Vpp signals into AC coupled terminated loads．The low－pass filters are powered by 3.3 V and the out－ puts by 5.0 V ．

The FMS6418A is available in both 16－pin SOIC and 14－pin TSSOP packages．

## Functional Block Diagram

## Electrical Specifications

( $T_{C}=25^{\circ} \mathrm{C}, \mathrm{V}_{\mathrm{i}}=1 \mathrm{~V}_{\text {pp }} ; \mathrm{V}_{\mathrm{CCA}}=3.3 \mathrm{~V}, \mathrm{~V}_{\text {CCO }}=5.0 \mathrm{~V}$, all inputs AC coupled with $0.1 \mu \mathrm{~F}$, all outputs AC coupled with $220 \mu \mathrm{~F}$ into $150 \Omega$, referenced to 400 kHz ; unless otherwise noted)

| Symbol | Parameter | Conditions | Min | Typ | Max | Units |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## General Description

The FMS6418A offers comprehensive filtering for set top box or DVD applications. This part consists of a triple 6th order filter with selectable 30 MHz to 8.0 MHz frequencies. A 2-to-1 multiplexer is provided on each filter. The filters are intended for either YUV or RGB signals. All channels accept DC coupled ground-referenced 1 V signals. The filters provide 2 Vpp signals into AC coupled terminated loads. All channels provide 6 dB gain, accept 1 V ground referenced inputs, and drive AC coupled loads. The RGB low-pass filters are powered by 3.3 V and the output buffers are powered by 5.0 V .

The FMS6418A is a next generation filter solution from Fairchild Semiconductor addressing the expanding filtering needs for set top boxes, and DVD players. The product provides selectable filtering with cutoff frequencies of 30 MHz or 8.0 MHz on the RGB/YUV channels. Thus, the FMS6418A addresses the requirement for a single set top box to be compatible with a variety of resolution standards. Multiplexers on the RGB channels provide further flexibility. For DVD, Set-top Box, and TV applications, the product provides filtering and output drive amplification for three channels of outputs (RGB/YUV).

## Applications DC Levels

At any given time, the input signal's DC levels must be between 0.0 V and 1.3 V to utilize the optimal headroom and to avoid clipping on the outputs.

## Single Supply +5V Operation

For low power consumption, the FMS6418 was designed to operate off of 5 V and $3.3 \mathrm{~V} . \mathrm{V}_{\mathrm{CCA}}$ can be operated from 5 V instead of 3.3 V and still meet specifications, except power consumption. When the 3.3 V supply is increased to 5 V , the typical current consumption increases by 5 mA . The net effect is the part dissipates an additional 22 percent of power.

## Driving the Digital Pins with 3.3V or 5V Logic.

Either is allowed as long as the Vih and Vil are adhered to.

## NOTES:

1 All dimensions are in millimeters (angle in degrees).
2 Dimensioning and tolerancing per ASME Y14.5-1994.
3 Dimensions "D" does not include mold flash, protusions or gate burrs. Mold flash protusions or gate burrs shall not exceed 0.15 per side
4 Dimension "E1" does not include interlead flash or protusion. Interlead flash or protusion shall not exceed 0.25 per side.
5 Dimension "b" does not include dambar protusion. Allowable dambar protusion shall be 0.08 mm total in excess of the "b" dimension at maximum material condition. Dambar connot be located on the lower radius of the foot. Minimum space between protusion and adjacent lead is 0.07 mm for 0.5 mm pitch packages.
6 Terminal numbers are shown for reference only.
7 Datums $-\mathrm{A}_{-}$and $-\mathrm{B}-$ to be determined at datum plane $-\mathrm{H}-$.
8 Dimensions "D" and "E1" to be determined at datum plane $-\mathrm{H}-$.
9. This dimensions applies only to variations with an even number of leads per side. For variation with an odd number of leads per side, the "center" lead must be coincident with the package centerline, Datum A.
10. Cross sections $A-A$ to be determined at 0.10 to 0.25 mm from the leadtip.

## LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to per form when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness
