To our customers,

Old Company Name in Catalogs and Other Documents

On April 1st, 2010, NEC Electronics Corporation merged with Renesas Technology Corporation, and Renesas Electronics Corporation took over all the business of both companies. Therefore, although the old company name remains in this document, it is a valid Renesas Electronics document. We appreciate your understanding.

Renesas Electronics website: http://www.renesas.com

April 1st, 2010
Renesas Electronics Corporation

Issued by: Renesas Electronics Corporation (http://www.renesas.com)

Send any inquiries to http://www.renesas.com/inquiry.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.

   "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.

   "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.

   "Specific": Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

To all our customers

Regarding the change of names mentioned in the document, such as Mitsubishi Electric and Mitsubishi XX, to Renesas Technology Corp.

The semiconductor operations of Hitachi and Mitsubishi Electric were transferred to Renesas Technology Corporation on April 1st 2003. These operations include microcomputer, logic, analog and discrete devices, and memory chips other than DRAMs (flash memory, SRAMs etc.) Accordingly, although Mitsubishi Electric, Mitsubishi Electric Corporation, Mitsubishi Semiconductors, and other Mitsubishi brand names are mentioned in the document, these names have in fact all been changed to Renesas Technology Corp. Thank you for your understanding. Except for our corporate trademark, logo and corporate statement, no changes whatsoever have been made to the contents of the document, and these changes do not constitute any alteration to the contents of the document itself.

Note : Mitsubishi Electric will continue the business operations of high frequency & optical devices and power devices.

M35074-XXXSP

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

DESCRIPTION

The M35074-XXXSP is a character pattern display control IC can display on the digital camera, the digital video, the digital television, the CRT display, the liquid crystal display and the plasma display.

A character color and a character background color can be chosen from 128 kinds of colors per character.

It uses a silicon gate CMOS process and it housed in a 20-pin shrink DIP package (M35074-XXXSP).

For M35074-002SP that is a standard ROM version of M35074-XXXSP respectively, the character pattern is also mentioned.

FEATURES

- Screen composition ..... 24 characters × 12 lines
- Number of characters displayed ..... 288 (Max.)
- Character composition ..... 12 × 18 dot matrix
- Characters available ..... ROM character:511 characters
- Character sizes available ..... 4 (vertical) × 4 (horizontal)
- Display locations available
  - Horizontal direction ..... 4055 locations
  - Vertical direction ..... 2047 locations
- Data input ..... By 24-bit serial input function
  ..... By the I²C-BUS serial input function (At only V_{DD} = 5V)
- Coloring for character
  - Character color ..... 128 colors (Character unit)
  - Background coloring ..... 128 colors (Character unit)
  - Border (shadow) coloring ..... 128 colors (unit of screen / character unit)
  - Raster coloring ..... 128 colors (unit of screen)
- Blanking for character
  - Character size blanking
  - Border size blanking
  - Matrix-outline blanking
  - All blanking (all raster area)
- Output ports
  8 shared output ports (toggled between CO0-CO6 and BLNK output)
- Display oscillation stop function

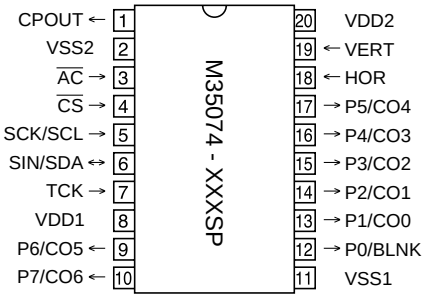
<At V_{DD} = 5V>

- Display input frequency range
  External clock mode 1 ..... Fosc = 6.3 MHz to 80 MHz
  External clock mode 2 ..... Fosc = 20 MHz to 120 MHz
  Internal clock mode ..... Fosc = 20 MH to 120 MHz
- Horizontal synchronous input frequency range
  ..... H.sync = 15 kHz to 130 kHz

<At V_{DD} = 3.3V>

- Display input frequency range
  External clock mode 1 ..... Fosc = 6.3 MHz to 40 MHz
- Horizontal synchronous input frequency range
  ..... H.sync = 15 kHz to 60 kHz

PIN CONFIGURATION (TOP VIEW)



Outline 20P4B

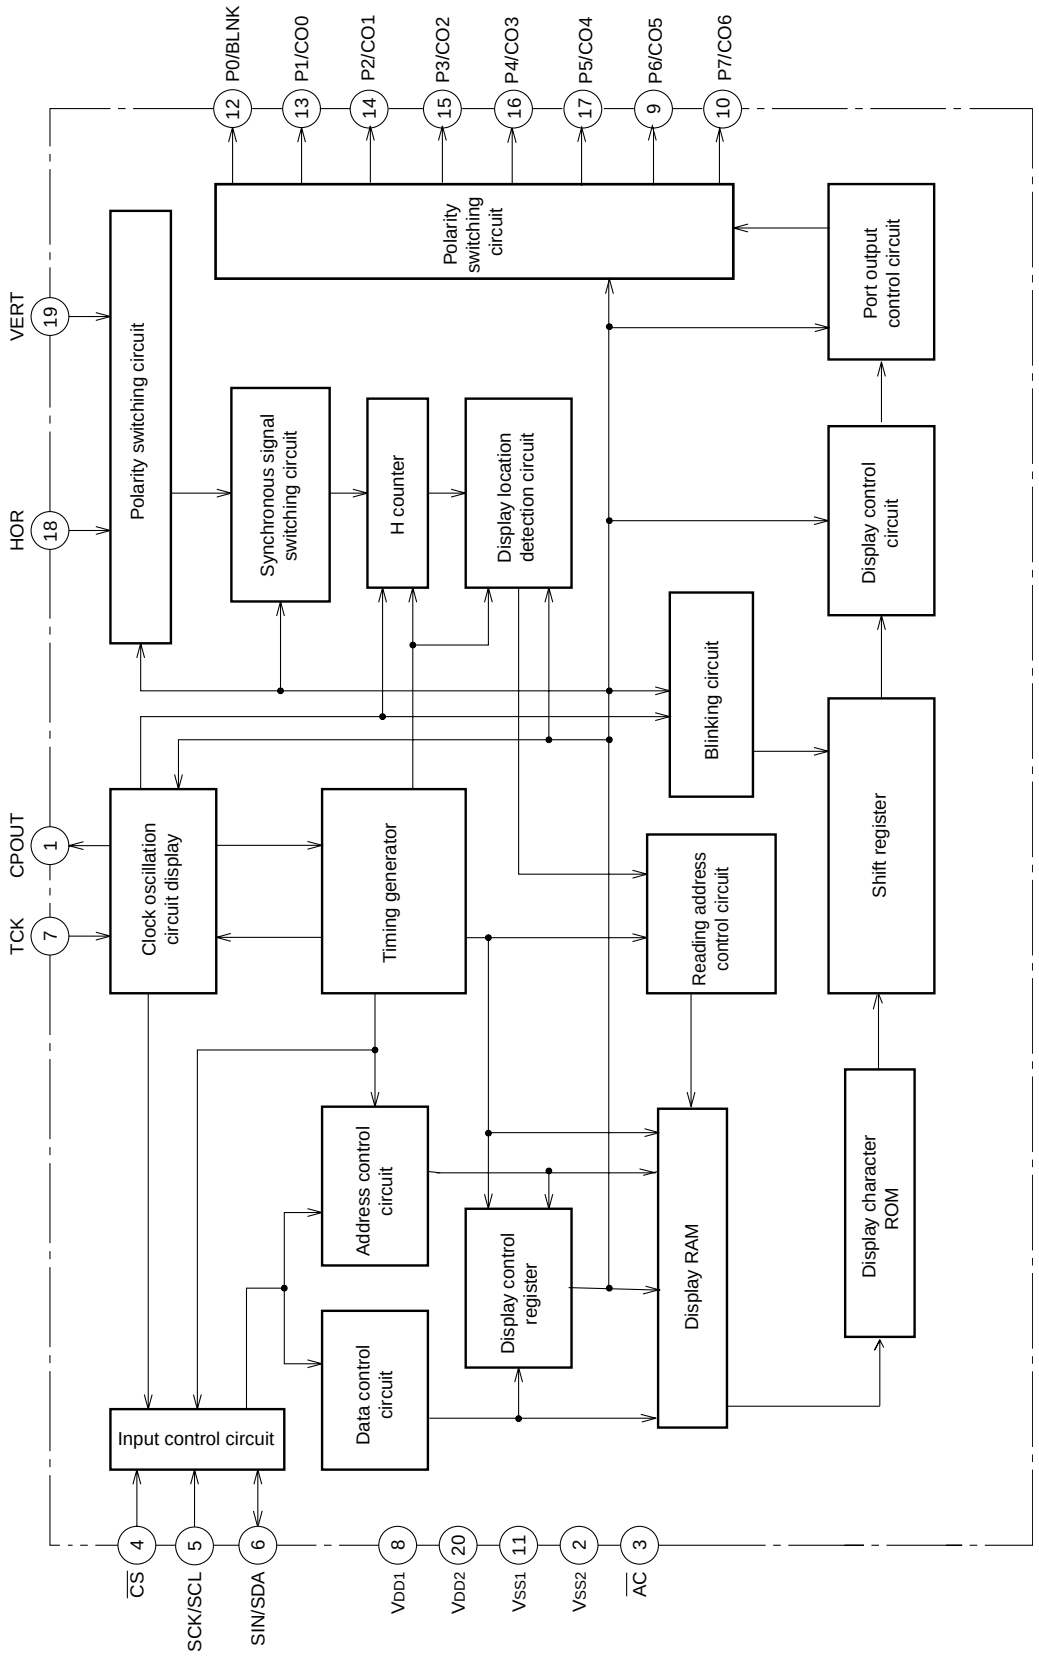
APPLICATION

Digital camera, Digital video, Digital television, CRT display, Liquid crystal display, Plasma display

PIN DESCRIPTION

Symbol	Pin name	Input/ Output	Function
CPOUT	Filter output	Output	Filter output. Connect loop filter to this pin.
V_{SS2}	Earthing pin	–	Connect to GND.
$\overline{AC}$	Auto-clear input	Input	When “L”, this pin resets the internal IC circuit. Hysteresis input. Built-in pull-up resistor.
$\overline{CS}$	Chip select input	Input	<At 24-bit serial communication> This is the pin for chip select. Set to “L” level at serial data transmission. Hysteresis input. Built-in pull-up resistor.
			<At I^2C-BUS communication> Connect to “H.”
SCK/SCL	Clock input	Input	<At 24-bit serial communication> SIN pin serial data is taken in when SCK rises at $\overline{CS}$ pin “L” level. Hysteresis input.
			<At I^2C-BUS communication> SDA pin serial data is taken in when SCL rises.
SIN/SDA	Data I/O	Input	<At 24-bit serial communication> This is the pin for serial input of display control register and display RAM data. Hysteresis input.
		I/O	<At I^2C-BUS communication> Hysteresis input. This is the pin for serial input of display control register and display RAM data. Also, this pin output acknowledge signal.
TCK	External clock input	Input	This is the pin for external clock input.
V_{DD1}	Power pin	–	Digtal power pin. Connect to +5V with the power pin.
P6/CO5	Port P6 output	Output	This pin can be toggled between port pin output and CO5 signal pin.
P7/CO6	Port P7 output	Output	This pin can be toggled between port pin output and CO6 signal pin.
V_{SS1}	Earthing pin	–	Connect to GND using circuit earthing pin.
P0/BLNK	Port P0 output	Output	This pin can be toggled between port pin output and BLNK signal output.
P1/CO0	Port P1 output	Output	This pin can be toggled between port pin output and CO0 signal output.
P2/CO1	Port P2 output	Output	This pin can be toggled between port pin output and CO1 signal output.
P3/CO2	Port P3 output	Output	This pin can be toggled between port pin output and CO2 signal output.
P4/CO3	Port P4 output	Output	This pin can be toggled between port pin output and CO3 signal output.
P5/CO4	Port P5 output	Output	This pin can be toggled between port pin output and CO4 signal output.
HOR	Horizontal synchro-nous signal input	Input	This pin inputs the horizontal synchronous signal. Hysteresis input.
VERT	Vertical synchro-nous signal input	Input	This pin inputs the vertical synchronous signal. Hysteresis input.
V_{DD2}	Power pin	–	Analog power pin. Connect to +5V with the power pin.

BLOCK DIAGRAM



MEMORY CONSTITUTION

Address 000_{16} to $11F_{16}$ are assigned to the display RAM, address 120_{16} to 128_{16} are assigned to the display control registers. The internal circuit is reset and all display control registers (address 120_{16} to 128_{16}) are set to "0" when the $\overline{AC}$ pin level is "L". And then, RAM is not erased and be undefinited. For detail, see "DATA INPUT EXAMPLE". Memory constitution is shown in Figure 1.

REGISTER SUPPLEMENTARY DESCRIPTION

(1) Setting external clock input and display frequency mode Setting external clock input and display frequency mode (by use of EXCK0, EXCK1 and DIV11 to DIV0 (120_{16}), as explained here following.

(a) When (EXCK1, EXCK0) = (0, 0) ..... External clock mode 1
Fosc = 6.3 to 80 MHz (VDD = 4.75V to 5.25V)
Fosc = 6.3 to 40 MHz (VDD = 3.00V to 3.60V)
Input from the TCK pin a constant-period continuous external clock that synchronizes with the horizontal synchronous signal. And input from HOR pin a constant period continuous horizontal synchronous signal.
Never stop inputting the clock while displaying.
Do not have to set a display frequency because the clock just as it is entered from outside is used as the display clock.

(b) When (EXCK1, EXCK0) = (0, 1) .....Internal clock mode
Fosc = 20 to 120 MHz (VDD = 4.75V to 5.25V)
Clock input from the TCK pin is unnecessary. The multiply clock of the internally generated horizontal synchronous signal is used as the display clock.
The display frequency is set by setting the multiply value of the horizontal synchronous frequency (of the display frequency) in DIV11 to DIV0 (address 120_{16}). Also, set the display frequency range. (See the next page.)
Display frequency is calculated using the below expression.

Display frequency = Horizontal synchronous frequency × Multiply value

(c) When (EXCK1, EXCK0) = (1, 0) ..... Setting disabled

(d) When (EXCK1, EXCK0) = (1, 1) ..... External clock mode 2
Fosc = 20 to 120 MHz (VDD = 4.75V to 5.25V)
Input from the TCK pin a constant-period continuous external clock that synchronizes with the horizontal synchronous signal. And input from HOR pin a constant-period continuous horizontal synchronous signal.
Never stop inputting the clock while displaying.
An internal clock which is in sync with the external input clock is used as the display clock.
Because the display frequency equals the external clock frequency, set N1 (division value) that satisfies the below expressions to DIV11 to DIV0 (address 120_{16}) for make the display frequency is equal to the external clock frequency.

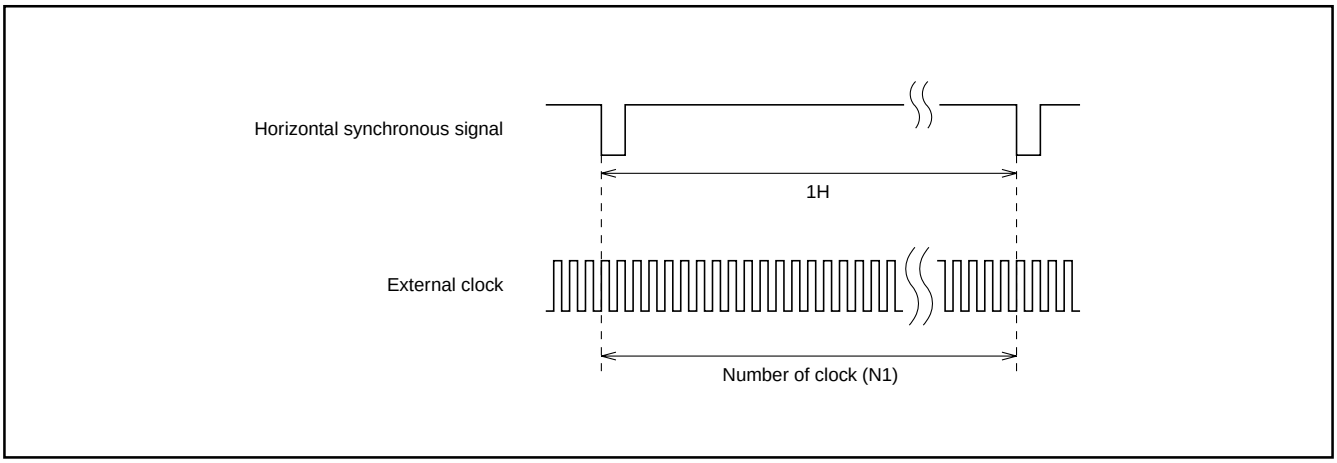

Fig. 3 Example of external clock input

(2) To set display frequency range

Whenever setting display frequency (when EXCK1 = "0", EXCK0 = "1", or EXCK1 = "1", EXCK0 = "1"), always set the display frequency range in accordance with the display frequency. This range is set from DIVS0, DIVS1, DIVS2, RSEL0 and RSEL1 (address 120_{16}). Frequency ranges are given here below.

RSEL1	RSEL0	DIVS2	DIVS1	DIVS0	Display frequency range MHz
1	1	0	0	0	112.0 to 120.0
1	0	0	0	0	104.0 to 112.0
0	1	0	0	0	93.0 to 104.0
0	0	0	0	0	80.0 to 93.0
1	1	0	0	1	75.0 to 80.0
1	0	0	0	1	69.5 to 75.0
0	1	0	0	1	62.0 to 69.5
0	0	0	0	1	55.0 to 62.0
1	1	0	1	0	—
1	0	0	1	0	52.0 to 55.0
0	1	0	1	0	46.5 to 52.0
0	0	0	1	0	40.0 to 46.5
1	1	0	1	1	37.5 to 40.0
1	0	0	1	1	35.0 to 37.5
0	1	0	1	1	31.0 to 35.0
0	0	0	1	1	27.5 to 31.0
1	1	1	0	0	—
1	0	1	0	0	26.0 to 27.5
0	1	1	0	0	23.5 to 26.0
0	0	1	0	0	20.0 to 23.5

(3) Notes on setting display frequency

To change external clock (display) frequency or horizontal synchronization frequency, always use the following procedures.

To set EXCK1 = "0", EXCK0 = "1"

(a) Turn the display OFF. … DSPON (address 127_{16}) = "0"
(b) Set the display frequency. … Set from DIV11 to DIV0, DIVS0, DIVS1, DIVS2, RSEL0 and RSEL1 (address 120_{16}).
(c) Wait 20 ms while the horizontal synchronization signal is being input.
(d) Turn the display ON. … DSPON (address 127_{16}) = "1"

To set EXCK1 = "1", EXCK0 = "1"

(a) Turn the display OFF. … DSPON (address 127_{16}) = "0"
(b) Set the display frequency. … Set from DIV11 to DIV0, DIVS0, DIVS1, DIVS2, RSEL0 and RSEL1 (address 120_{16}).
(c) Wait 20 ms while the horizontal synchronization signal and external clock are being input.
(d) Turn the display ON. … DSPON (address 127_{16}) = "1"

DISPLAY FORM 1

(1) blanking mode

Character size

: Blanking same as the character size.

Border size

: Blanking the background as a size from character.

Matrix-outline size

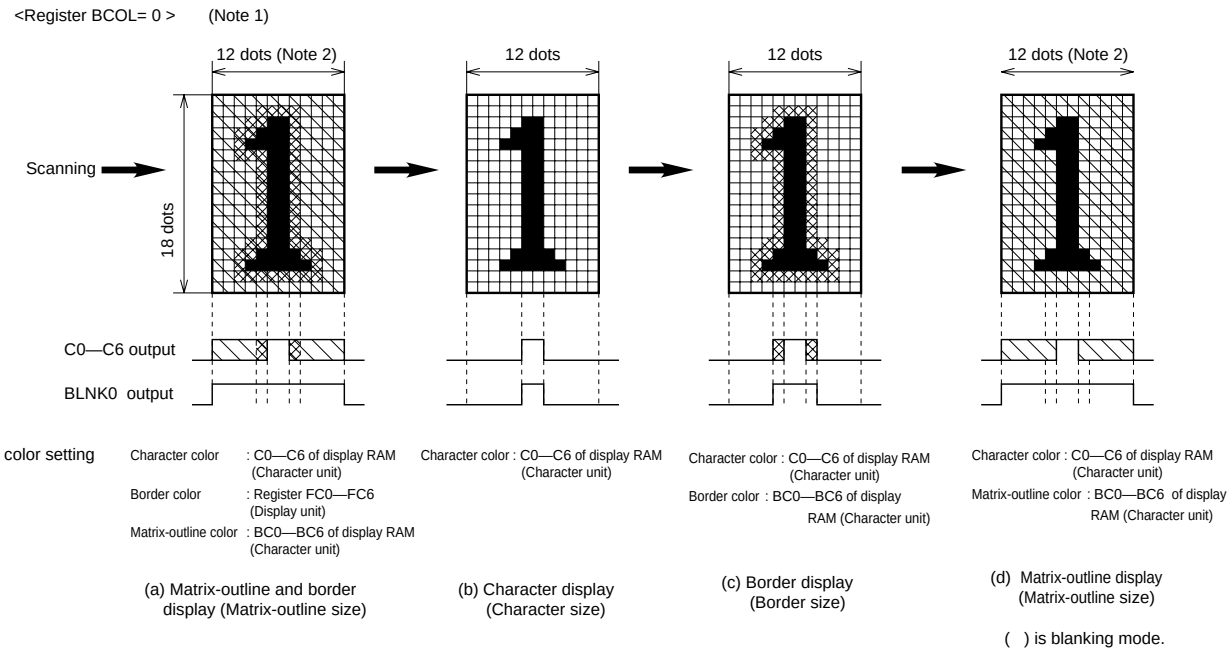
: Blanking the background 12 × 18 dot.

All blanking size

: When set register BCOL to "1", all raster area is blanking.

The display mode and blanking mode can be set line-by-line, as follows, from registers BCOL, BLK1, BLK0, DSP0 to DSP11 (address 123_{16}).

BCOL	BLK1	BLK0	Line of DSPn = "0"		Line of DSPn = "1"	
			Display mode	Blanking mode	Display mode	Blanking mode
0	0	0	Matrix-outline border display	Matrix-outline size	Matrix-outline display	Matrix-outline size
	0	1	Character display	Character size	Border display	Border size
	1	0	Border display	Border size	Matrix-outline display	Matrix-outlinesize
	1	1	Matrix-outline display	Matrix-outline size	Character display	Character size
1	0	0	Matrix-outline border display	All blanking size	Matrix-outline display	All blanking size
	0	1	Character display		Border display	
	1	0	Border display		Matrix-outline display	
	1	1	Matrix-outline display		Character display	



Note 1: When register BCOL is set to "1", the raster range of the display modes set respectively by BLK1 and BLK0 are colored by registers RC0—RC6 (address 126_{16}). And the blanking mode is set all blanking size (all raster size) regardless of the BLK1 and BLK0 settings.

2: The horizontal size of the full matrix-outline size can be set to 14 dots by register BETA14 (address 123_{16}). BLNK0 can also be output at 14 dots.

Fig. 4 Display form

(2) Shadow display

When border display mode, if set SYAD (address 123_{16}) = "0" to "1", it change to shadow display mode.
Border and shadow display are shown below.
Set shadow display color by BR, BG and BB of display RAM or by register FR, FG and FB.

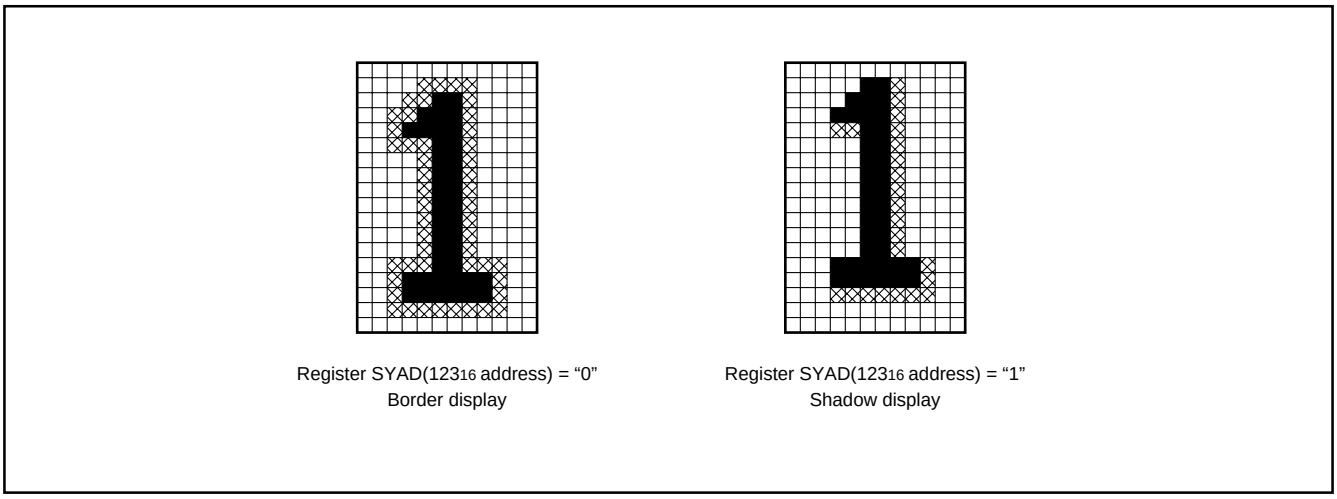


Fig.5 Shadow display

CHARACTER FONT

Images are composed on a 12 × 18 dot matrix, and characters can be linked vertically and horizontally with other characters to allow the display the continuous symbols.
Character code FF_{16} is fixed as a blank without background. Therefore, cannot register a character font in this code.

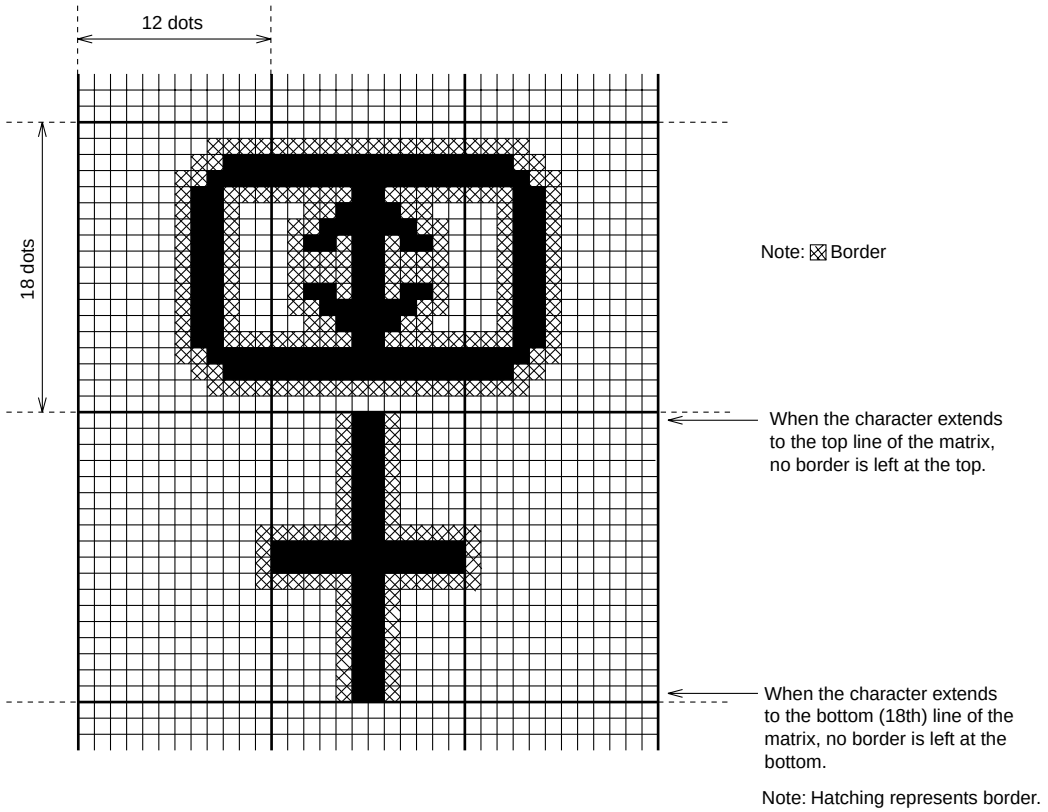

Fig.6 Example of border display

DATA INPUT EXAMPLE

Data of display RAM and display control registers can be set by the 24-bit serial input function or the I²C-BUS serial input function. Example of data setting is shown in Figure 7 (at EXCK0 = "1", EXCK1 = "0" setting).

Example of the M35074-XXXSP Data input setting (at EXCK0 ="1", EXCK1 ="0")

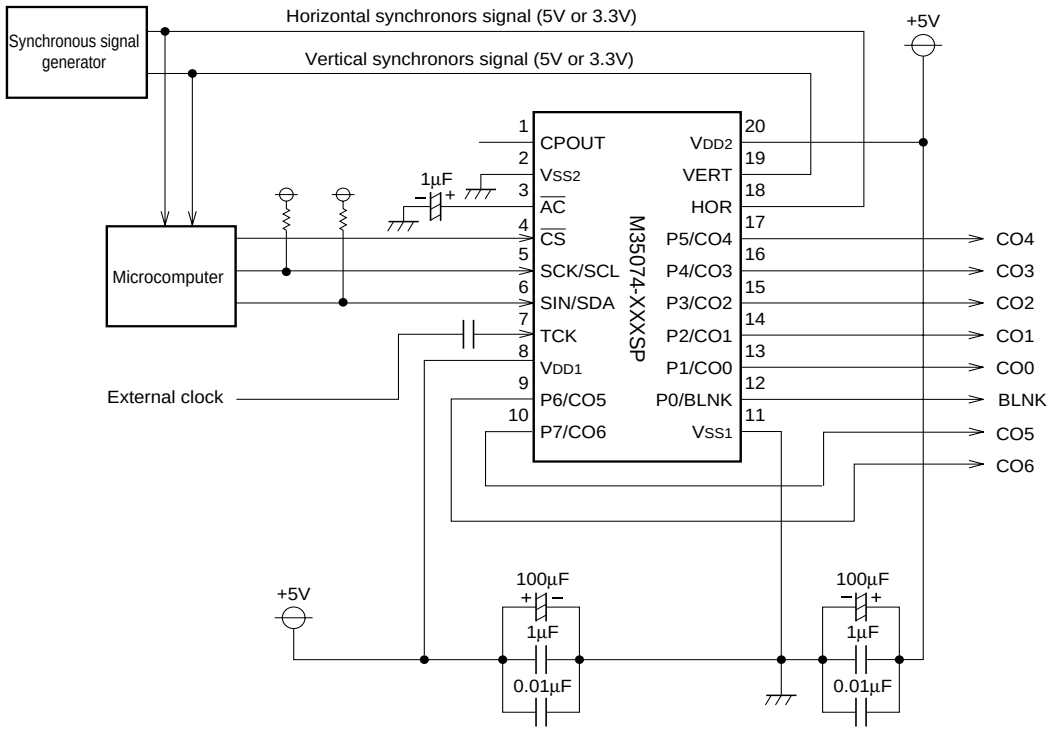
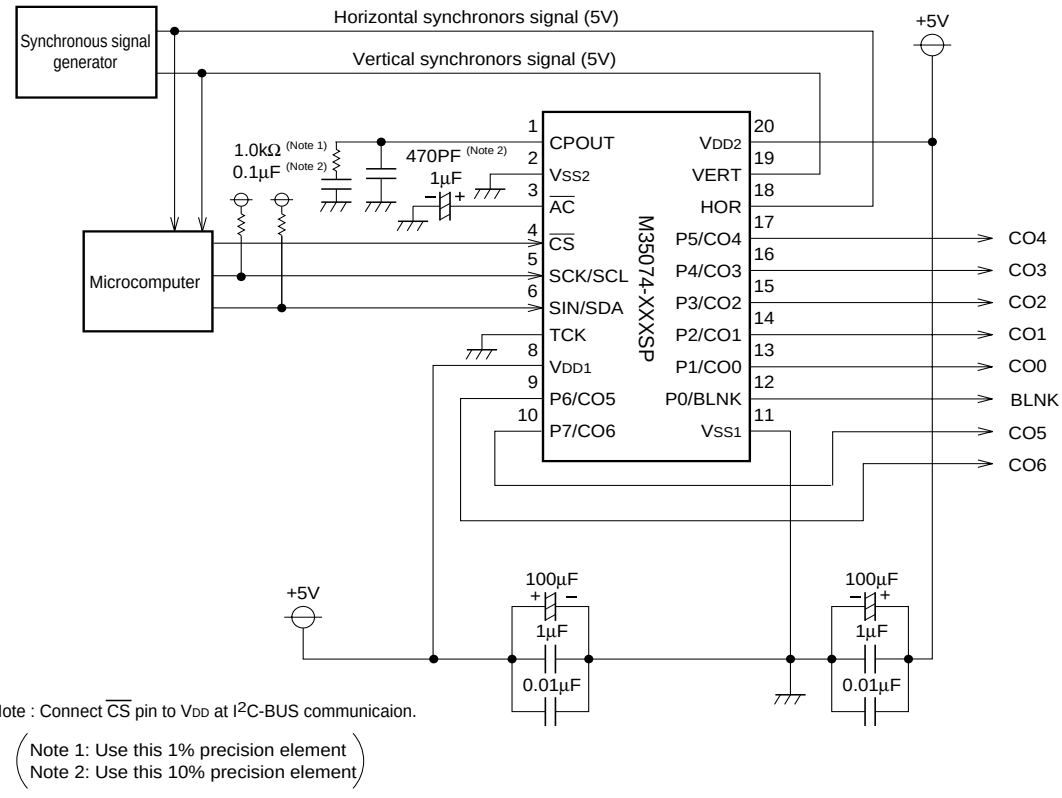
Notes 1 : Input a horizontal synchronous signal into the HOR pin and a vertical synchronous signal into the VERT pin.
2 : Matrix-outline display in this data.
3 : Secure the waiting time of 200ms after releasing $\overline{AC}$, and set data from setting the display frequency (setting of the register).
4 : Set data to Display RAM at internal clock (display clock) is stabilized.

Fig. 7 Example of data setting



Notes 1: CPOUT pin can be opened when use only EXCK1 = "0" and EXCK0 = "0".
2: Connect $\overline{CS}$ pin to V_{DD} at I^2C-BUS communicaion.

Fig.8 Example of the M35074-XXXSP peripheral circuit (External clock mode 1. At EXCK1 = "0", EXCK0 = "0")



Note : Connect $\overline{CS}$ pin to V_{DD} at I^2C-BUS communicaion.

(Note 1: Use this 1% precision element
Note 2: Use this 10% precision element)

Fig.9 Example of the M35074-XXXSP peripheral circuit (Internal clock mode. At EXCK1 = "0", EXCK0 = "1")

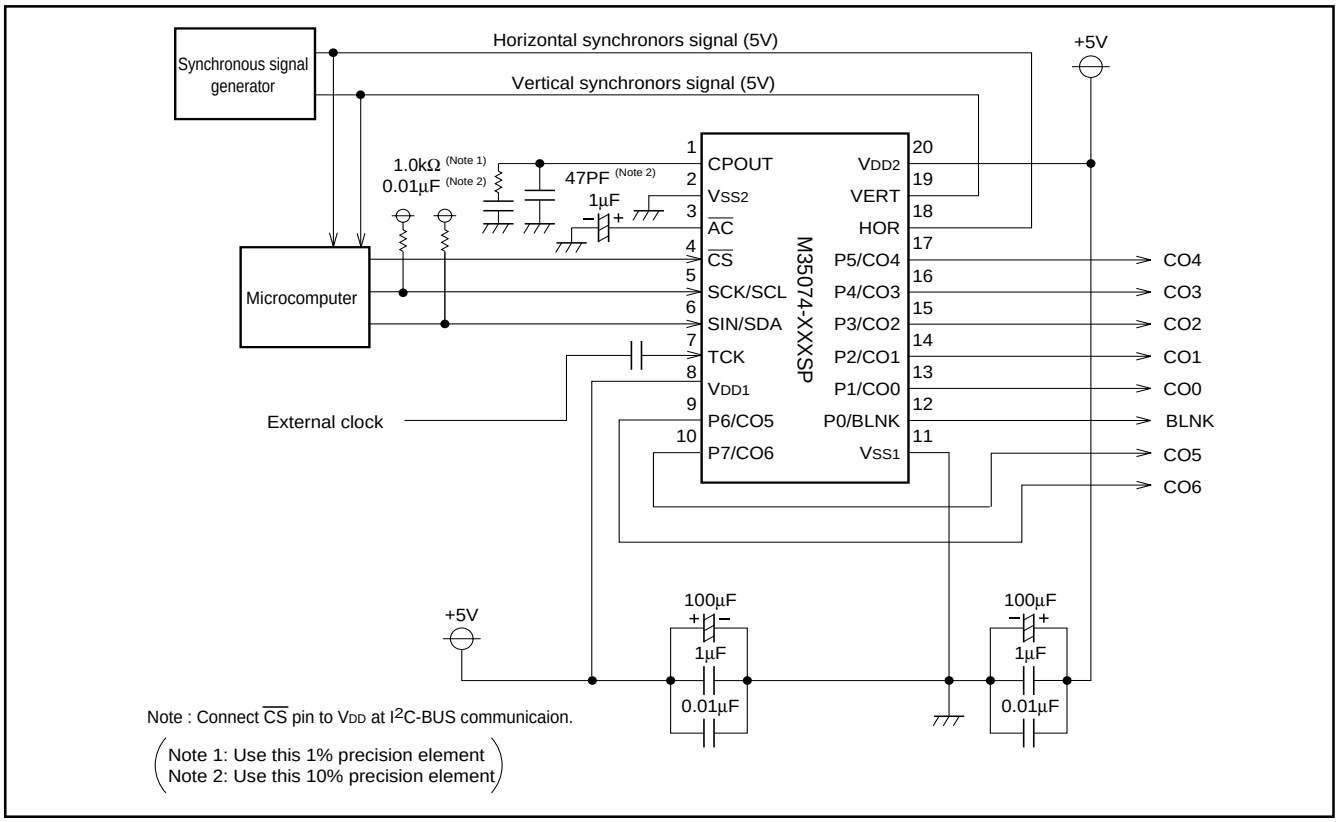


Fig.10 Example of the M35074-XXXSP peripheral circuit (External clock mode2. At EXCK1 = "1", EXCK0 = "1")

DATA INPUT 1

(1) SERIAL DATA INPUT TIMING

(a) Serial data should be input with the LSB first.

(b) The address consists of 24 bits.

(c) The data consists of 24 bits.

(d) The 24 bits in the SCK after the $\overline{CS}$ signal has fallen are the address, and for succeeding input data, the address is incremented every 24 bits. Therefore, it is not necessary to input the address from the second data.

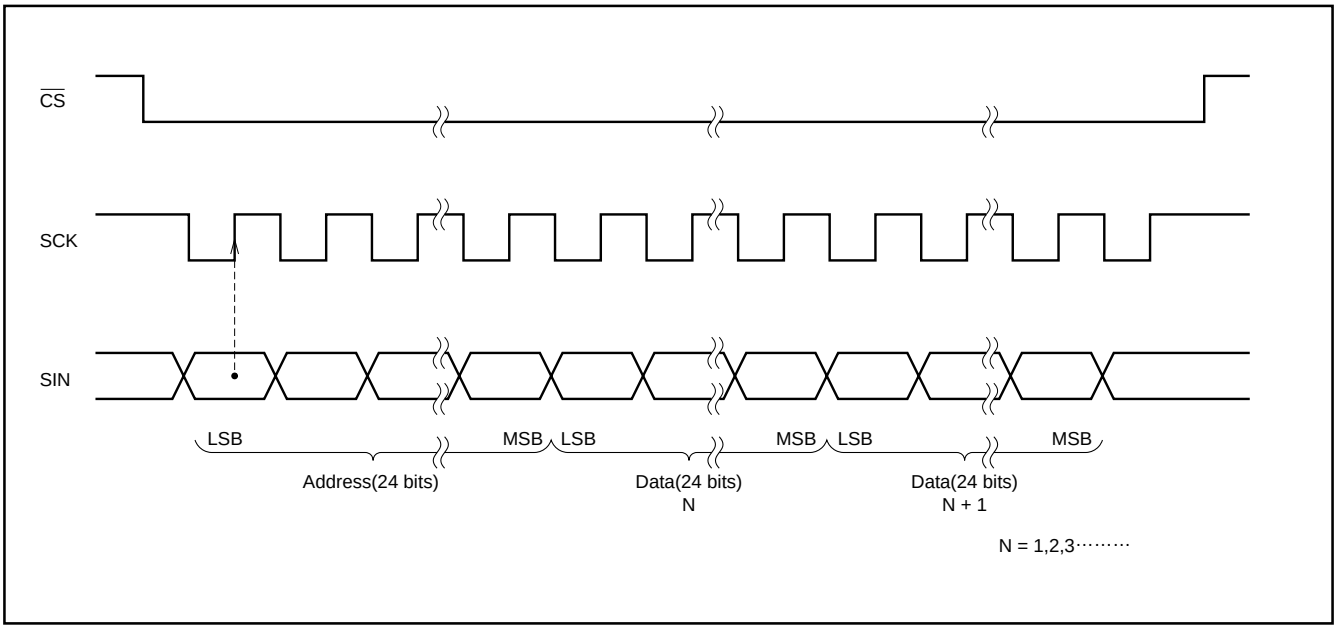

Fig.11 Serial input timing

(2) TIMING REQUIREMENTS
Data input

Symbol	Parameter	Limits			Unit	Remarks
		Min.	Typ.	Max.		
$t_{w(SCK)}$	SCK width	200	—	—	ns	See Figure 12
$t_{su(\overline{CS})}$	$\overline{CS}$ setup time	200	—	—	ns	
$t_{h(\overline{CS})}$	$\overline{CS}$ hold time	2	—	—	µs	
$t_{su(SIN)}$	SIN setup time	200	—	—	ns	
$t_{h(SIN)}$	SIN hold time	200	—	—	ns	
t_{word}	1 word writing time	14	—	—	µs	

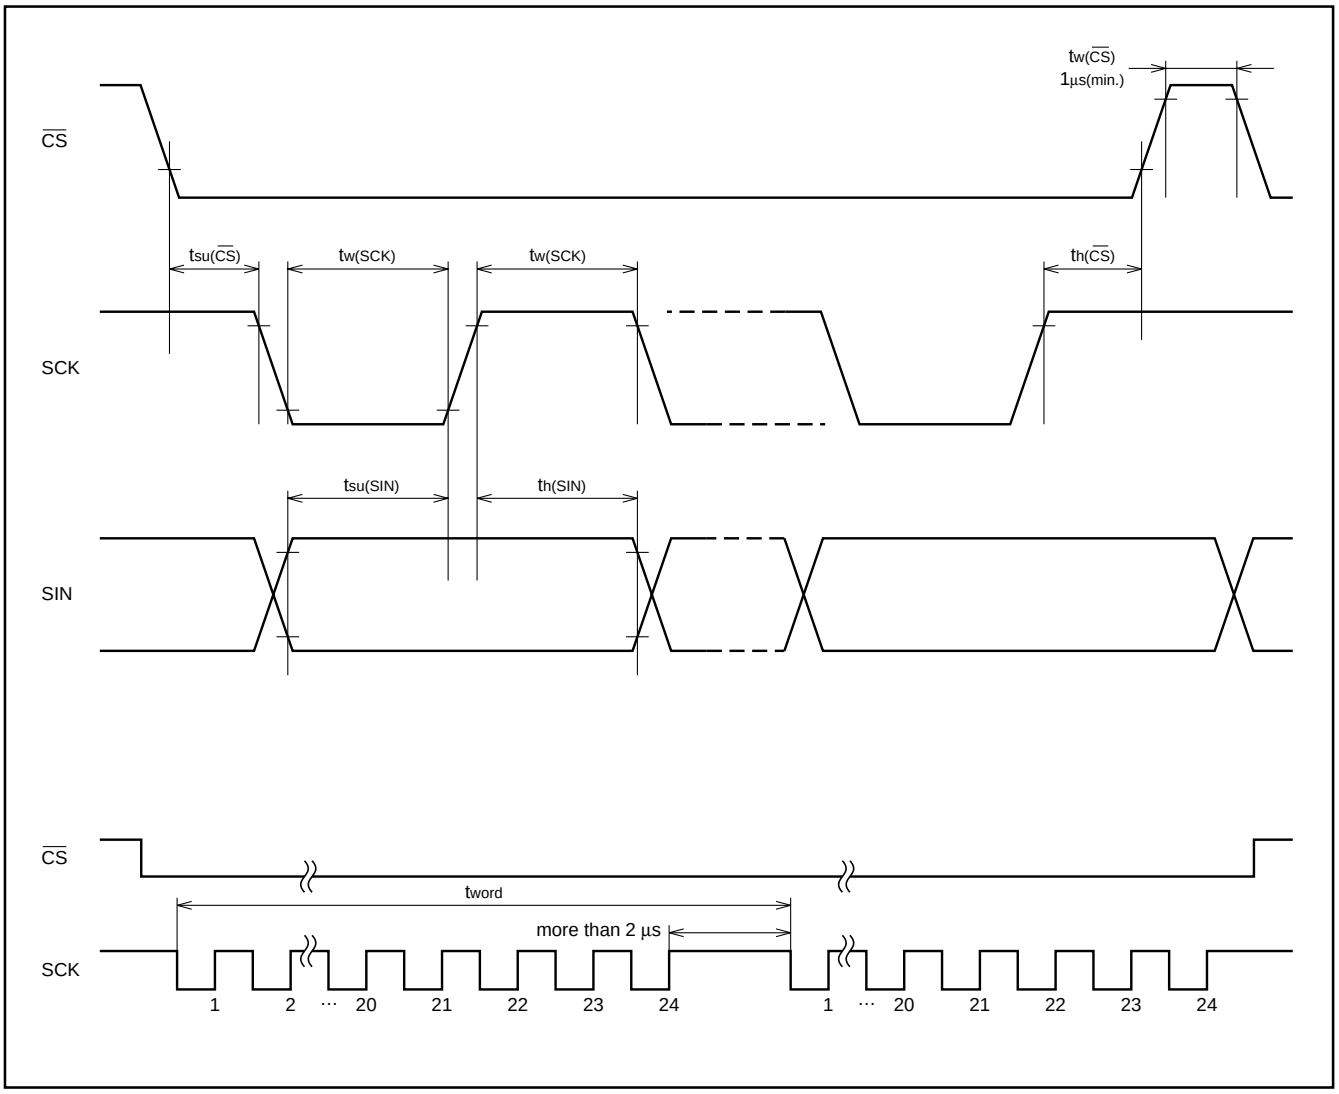

Fig. 12 Serial input timing requirements

DATA INPUT 2

(1) I^2C-Bus communication function (At only VDD = 5V)

This IC has a built-in data transmission interface which utilizes 2 unidirectional buses. In communications, this IC functions as a slave reception device.

The IC is synchronized with the serial clock (SCL) sent from the master device and receives the data (SDA).

Communications are controlled from the start/stop states.

Also, always in put the control byte after attaining the start state.

The below chart shows the start/stop state and control byte configuration.

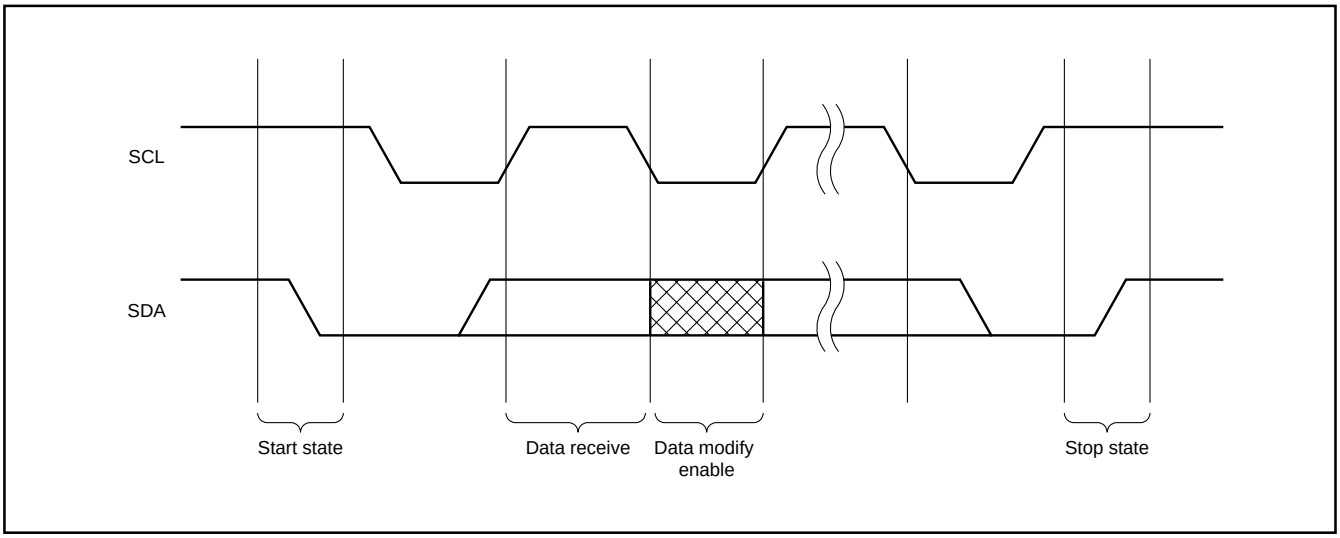

Fig.13 Start state / Stop state

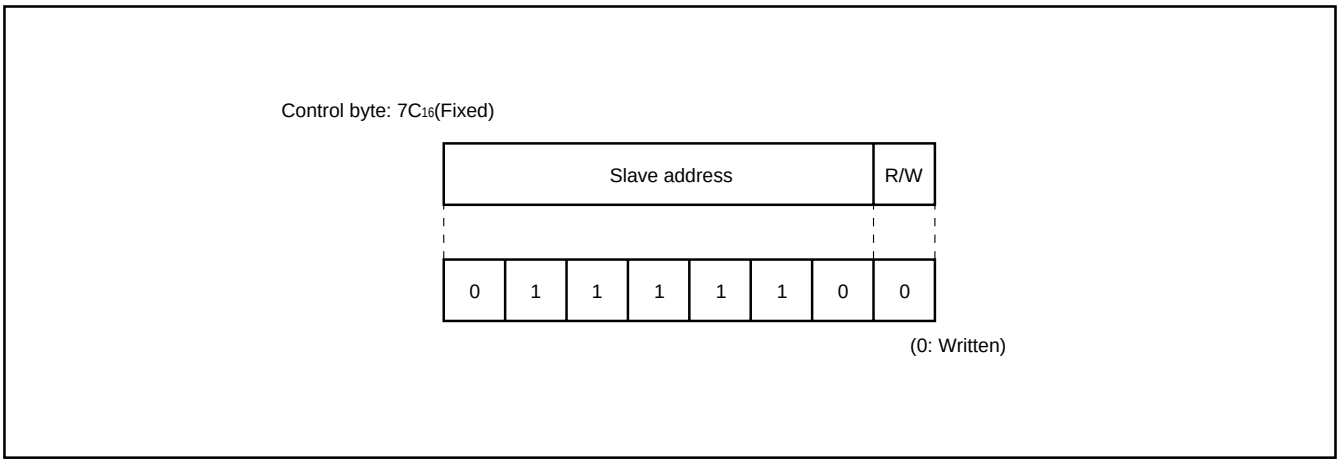

Fig.14 Control byte configuration

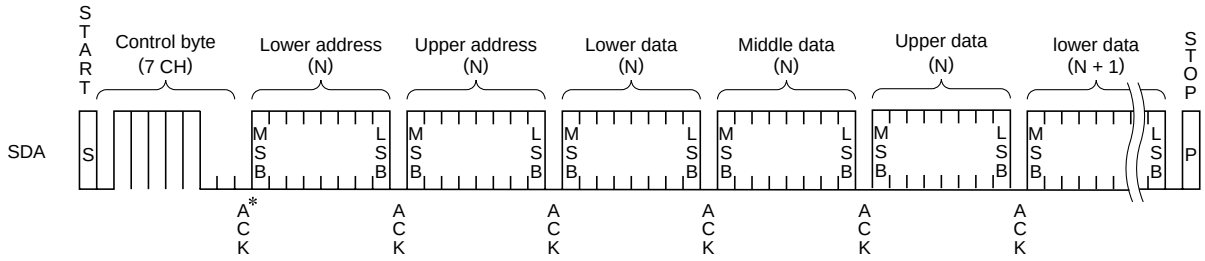
(2) Data input (Sequence)

(a) Addresses are consists of 16 bits.
(b) Data is consists of 24 bits.
(c) Addresses and data are communicated in 8-bit units. Input the lower 8 bits before the upper 8 bits. Make input from the MSB side.
(d) After the start state has been attained and the control byte (7CH) received, the next 16 bits (2 bytes) are for inputting the address. Addresses are increased in increments for every 24 bits (3 bytes) of data input thereafter. As a result, it is not necessary to input the address from the second data.

Note:During external synchronous , do not stop the external clock input from the TCK pin while inputting data.



ACK* (Acknowledge) : Output the acknowledge signal whenever one byte input after the start state. Output the acknowledge signal and recieve the data thereafter when match the slave address (7CH).

Fig.15 Data input sequence

(3) TIMING REQUIREMENTS
Data input

Symbol	Parameter	Limits				Unit	Remarks
		Typ. mode		High-speed mode			
		Min.	Max.	Min.	Max.

V_{OL}	"L" level output voltage	P0 to P7 (Note2)	V_{DD} = 4.75V, I_{OL} = 0.4mA	—	—	0.4	V
		CPOUT	V_{DD} = 4.75V, I_{OL} = 0.05mA				
		SIN/SDA	V_{DD} = 4.75V, I_{OL} = 3.0mA				
R_I	Pull-up resistance $\overline{AC}$, $\overline{CS}$		V_{DD} = 5.00V	10	30	100	kΩ
V_{TCK}	External clock input width		4.75V ≤ V_{DD} ≤ 5.25V	0.6 X V_{DD}	—	0.9 X V_{DD}	V

Notes 1: The current from the IC must not exceed – 0.4 mA/port at any of the port pins (P0 to P7).
2: The current flowing into the IC must not exceed 0.4 mA/port at any of port pins (P0 to P7).

ELECTRICAL CHARACTERISTICS 2 V_{DD} = 3.3V (V_{DD} = 3.30V, Ta = 25°C, unless otherwise noted)

Symbol	Parameter	Test conditions	Limits			Unit
			Min.	Typ.	Max.	
V_{DD}	Supply voltage	Ta = –20 to +85°C	3.00	3.30	3.60	V
I_{DD}	Supply current	V_{DD} = 3.30V	—	20	30	mA
V_{OH}	"H" level output voltage P0 to P7 (Note1)	V_{DD} = 3.00V, I_{OH} = -0.1mA	2.60	—	—	V
V_{OL}	"L" level output voltage P0 to P7 (Note2)	V_{DD} = 3.00V, I_{OL} = 0.1mA	—	—	0.4	V
R_I	Pull-up resistance $\overline{AC}$, $\overline{CS}$	V_{DD} = 3.30V	30	—	150	kΩ
V_{TCK}	External clock input width	3.00V ≤ V_{DD} ≤ 3.60V	0.9 X V_{DD}	—	V_{DD}	V

Notes 1: The current from the IC must not exceed – 0.1 mA/port at any of the port pins (P0 to P7).
2: The current flowing into the IC must not exceed 0.1 mA/port at any of port pins (P0 to P7).

NOTE FOR SUPPLYING POWER

(1) Timing of power supplying to $\overline{AC}$ pin

The internal circuit of M35074-XXXSP is reset when the level of the auto clear input pin $\overline{AC}$ is "L". This pin in hysteresis input with the pull-up resistor.

The timing about power supplying of $\overline{AC}$ pin is shown in Figure 15.

After supplying the power (V_{DD} and V_{SS}) to M35074-XXXSP and the supply voltage becomes more than 0.8 × V_{DD}, it needs to keep V_{IL} time; tw of the $\overline{AC}$ pin for more than 1ms.

Start inputting from microcomputer after $\overline{AC}$ pin supply voltage becomes more than 0.8 × V_{DD} and keeping 200ms wait time.

(2) Timing of power supplying to V_{DD1} and V_{DD2}.

Supply power to V_{DD1} and V_{DD2} at the same time.

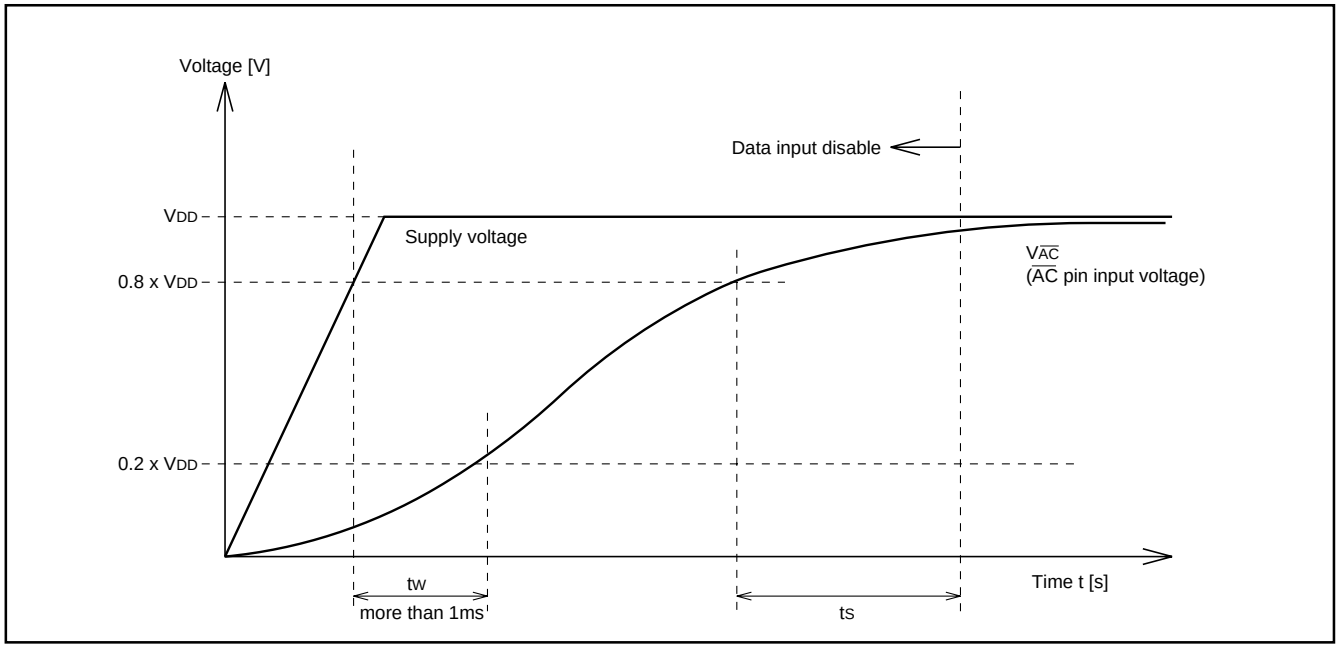

Fig.17 Timing of power supplying to $\overline{AC}$ pin

PRECAUTION FOR USE

Notes on noise and latch-up

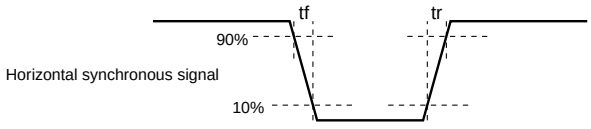
In order to avoid noise and latch-up, connect a bypass capacitor (≈0.1µF) directly between the V_{DD1} pin and V_{SS1} pin, and the V_{DD2} pin and V_{SS2} pin using a heavy wire.

Note for waveform timing of the horizontal signals to the HOR pin

Set horizontal synchronous signal edge* waveform timing to under 5ns and input to HOR pin.

Set only the side which set by B/$\overline{F}$ register waveform timing under 5ns and input to HOR pin.

*: Set front porch edge or back porch edge by B/$\overline{F}$ register (address 127_{16}) .



DATA REQUIRED FOR MASK ROM ORDERING

Please send the following data for mask orders.

(1) M35074-XXXSP mask ROM order confirmation form

(2) 20P4B mark specification form

(3) ROM data : EPROMs or floppy disks

*In the case of EPROMs, thres sets of EPROMs are required per pattern.

*In the case of floppy disks, 3.5-inch 2HD disk (1BM format) is required per pattern.

STANDARD ROM TYPE : M35074-002SP

M35074-002SP is a standard ROM type of M35074-XXXSP.
The character patterns are fixed to the contents of Figure 18 to 25.
