

74LCXH32245

Low Voltage 32-Bit Bidirectional Transceiver with 5V Tolerant Inputs and Outputs with Bushold

General Description

The LCXH32245 contains thirty-two non-inverting bidirectional buffers with 3-STATE outputs and is intended for bus oriented applications. The device is designed for low voltage (2.5V or 3.3V) V_{CC} applications with capability of interfacing to a 5V signal environment. The device is byte controlled. Each byte has separate control inputs which could be shorted together for full 32-bit operation. The T/R inputs determine the direction of data flow through the device. The OE inputs disable both the A and B ports by placing them in a high impedance state.

The LCXH32245 data inputs include bushold, eliminating the need for external pull-up/down resistors to hold unused inputs.

The LCXH32245 is fabricated with an advanced CMOS technology to achieve high speed operation while maintaining CMOS low power dissipation.

Features

- 5V tolerant inputs and outputs
 - 2.3V to 3.6V V_{CC} specifications provided
 - 4.5 ns t_{PD} max ($V_{CC} = 3.3V$), 20 μA I_{CC} max
 - Power-off high impedance inputs and outputs
 - Bushold on inputs eliminates the need for external pull-up/down resistors
 - Supports live insertion/withdrawal (Note 1)
 - ± 24 mA output drive ($V_{CC} = 3.0V$)
 - Uses patented noise/EMI reduction circuitry
 - Latch-up performance exceeds 500 mA
 - ESD performance:
 - Human body model > 2000V
 - Machine model > 200V
 - Packaged in plastic Fine-Pitch Ball Grid Array (FBGA)
- Note 1:** To ensure the high-impedance state during power-up or down, OE should be tied to VCC through a pull-up resistor; the minimum value or the resistor is determined by the current-sourcing capability of the driver.

Ordering Code:

Order Number	Package Number	Package Description
74LCXH32245G (Note 2) (Note 3)	BGA96A	96-Ball Fine-Pitch Ball Grid Array (FBGA), JEDEC MO-205, 5.5mm Wide

Note 2: Ordering Code "G" indicates Trays.

Note 3: Devices also available in Tape and Reel. Specify by appending the suffix letter "X" to the ordering code.

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
