

# Headphone / speaker amplifier for notebook computers

## BA7786FP-Y / BA7787FS

The BA7786FP-Y and BA7787FS are sound amplifiers designed for notebook computers, and contain a suspend function and input pins for the system beep and PM beep sounds used by notebook computers. In short, this single-chip IC contains all the analog audio components needed for notebook computers.

Product	H.P.amp	S.P.amp	Other functions
BA7786FP-Y	Stereo	Stereo	SYSTEM / PM BEEP input, SUSPEND, EVR, MUTE, BEEP level control
BA7787FS	Stereo	Monaural	

### ●Applications

Notebook computers

### ●Features

- 1) Stereo headphone amplifier that supports mixing input, along with a stereo speaker amplifier (BA7786FP-Y) or BTL monaural speaker amplifier (BA7787FS).
- 2) Internal anti-pop circuit, to prevent the popping sounds that occur when the power is turned on and off.
- 3) Internal electronic volume switch and mute circuit.
- 4) Separate suspend modes for the headphone amplifier and speaker amplifier, for low-power-consumption computers.
- 5) Two beep input pins, a necessity for notebook computers.

### ●Absolute maximum ratings (Ta = 25°C)

Parameter	Symbol	Limits	Unit
Power supply voltage	V <sub>cc</sub>	6	V
Power dissipation	BA7786FP-Y	850*1	mW
	BA7787FS	600*2	
Operating temperature	T <sub>opr</sub>	- 10 ~ + 70	°C
Storage temperature	T <sub>stg</sub>	- 55 ~ + 125	°C

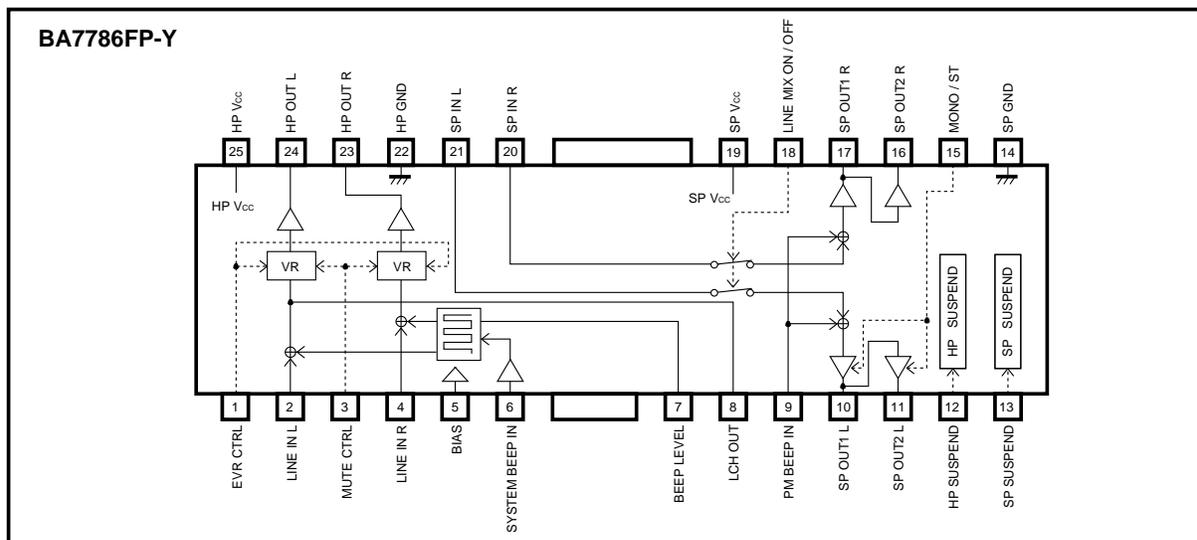

\*1 Reduced by 6.8mW for each increase in Ta of 1°C over 25°C.

\*2 Reduced by 6.0mW for each increase in Ta of 1°C over 25°C.

### ●Recommended operating conditions (Ta = 25°C)

Parameter	Symbol	Min.	Typ.	Max.	Unit
Power supply voltage	V <sub>cc</sub>	4.5	5.0	5.5	V

## ● Block diagram

## ● Pin descriptions

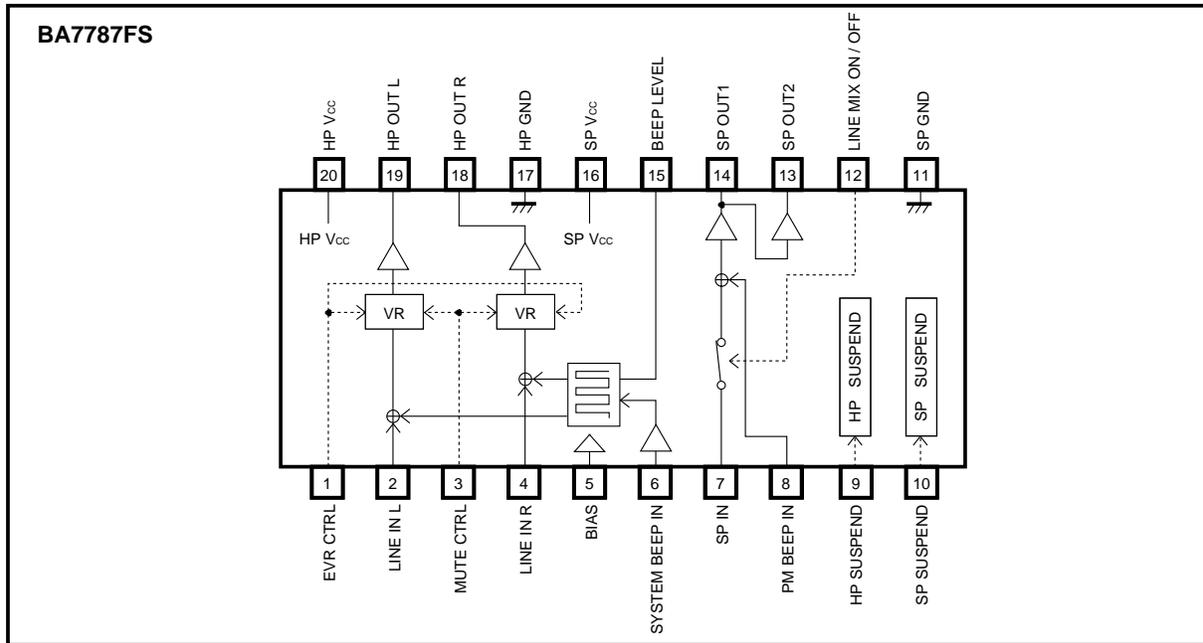

## BA7786FP-Y

Pin No.	Pin name	Function	Voltage	Type
1	EVR CTRL	EVR control pin	—	B (NPN)
2	LINE IN L	Line Lch input	2.5	B (PNP)
3	MUTE CTRL	Headphone mute control pin	5.0	100kΩ PULL UP
4	LINE IN R	Line Rch input	2.5	B (PNP)
5	BIAS	Bias	2.5	23.5kΩ
6	SYSTEM BEEP IN	SYSTEM BEEP input	2.5	B (NPN)
7	BEEP LEVEL	SYSTEM BEEP IN output level setting	4.2	C (PNP) ~ 3kΩ
8	LCH OUT	LINE IN L + SYSTEM BEEP IN output	—	C (PNP)
9	PM BEEP IN	PM beep input	2.5	B (NPN)
10	SP OUT1 L	BTL speaker Lch output (forward)	2.5	EF (NPN)
11	SP OUT2 L	BTL speaker Lch output (reverse)	2.5	EF (NPN)
12	HP SUSPEND	Headphone SUSPEND control	5.0	100kΩ PULL UP
13	SP SUSPEND	Speaker SUSPEND control	5.0	100kΩ PULL UP
14	SP GND	Speaker ground	0.0	—
15	MONO / ST	Speaker amplifier Lch ON / OFF control	5.0	100kΩ PULL UP
16	SP OUT2 R	BTL speaker Rch output (reverse)	2.5	EF (NPN)
17	SP OUT1 R	BTL speaker Rch output (forward)	2.5	EF (NPN)
18	LINE MIX ON / OFF	SP IN L / R input ON / OFF control	5.0	100kΩ PULL UP
19	SP Vcc	Speaker Vcc	5.0	—
20	SP IN R	Speaker Rch input	2.5	B (NPN)
21	SP IN L	Speaker Lch input	2.5	B (NPN)
22	HP GND	Headphone ground	0.0	—
23	HP OUT R	Headphone Rch output	2.5	EF (NPN)
24	HP OUT L	Headphone Lch output	2.5	EF (NPN)
25	HP Vcc	Headphone Vcc	5.0	—

Note) The pin formats are as follows. EF: emitter follower; B: base; C: collector; ~ : series connection.

The above values are all based on the settings (HP Vcc = SP Vcc = + 5.0V) in Fig. 1, entitled "Measurement circuit diagram," and do not guarantee standards.

● Measurement circuit

BA7786FP-Y

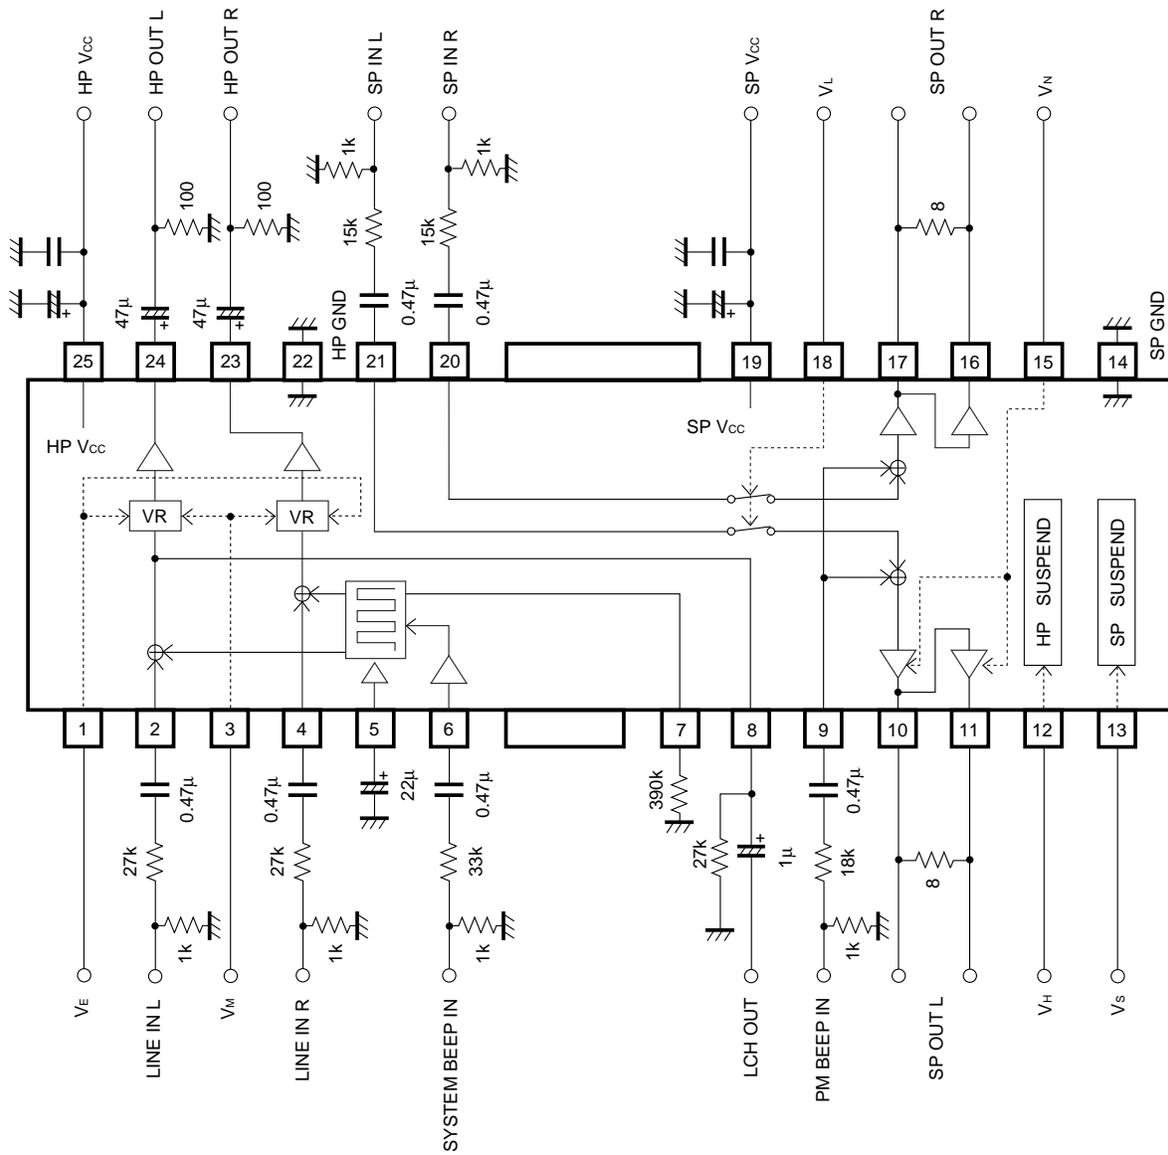

Fig.1

BA7787FS

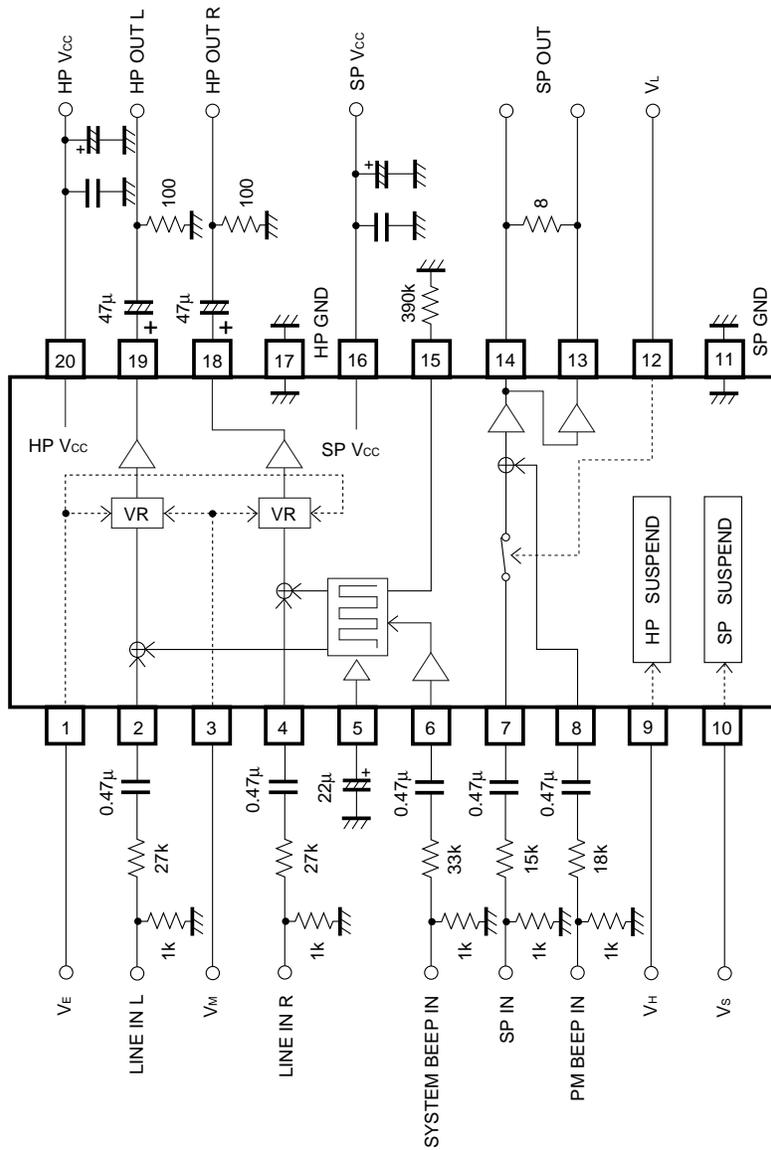

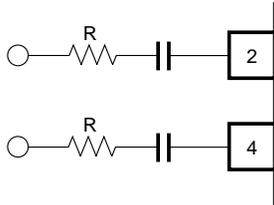

Fig.2

●Circuit operation

(1) Gain between LINE IN L / LINE IN R and HP OUT L / HP OUT R

$G_{HP}$ , the gain when EVR is at its maximum ( $V_E = HP V_{CC}$ ), is calculated as follows:

$$G_{HP} \approx 20 * \text{LOG} \frac{60k}{1k + R} \text{ (dB)}$$

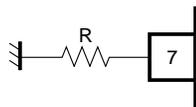

Set so that  $12k \leq R \leq 56k$ . This gain attenuates according to the pin 1 DC voltage ( $V_E$ ) (see Fig. 8). Mixing input can be accommodated by attaching multiple resistors.

(2) Output level between SYSTEM BEEP IN and HP OUT L / HP OUT R

Inputting a pulse wave to SYSTEM BEEP IN causes HP OUT L and HP OUT R to output a pulse wave. The output level of this pulse wave depends on the resistance between pin 7 and GND. The level when EVR is at its maximum ( $V_E = HP V_{CC}$ ) is calculated as follows.

$$V_{HB} \approx 0.5 * \frac{V_{CC} - 0.7}{13k + R} * 60k \text{ (V}_{P-P}\text{)}$$

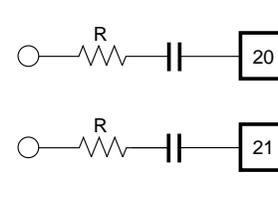

(BA7786FP-Y only, BA7787FS: pin 15)

Set so that  $R \geq 100k$  ( $V_{HB} \leq 1.1V$ ). As with the path between LINE IN L / LINE IN R and HP OUT L / HP OUT R, this level attenuates according to the pin 1 DC voltage.

(3) Gain between SP IN L / SP IN R and SP OUT L / SP OUT R (BA7786FP-Y)

This is calculated as follows.

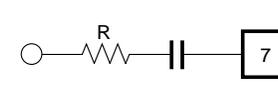

$$G_{SP} \approx 20 * \text{LOG} \frac{32k}{1k + R} \text{ (dB)}$$

Gain between SP IN and SP OUT 1 / SP OUT 2 (BA7787FS)

This is calculated as follows.

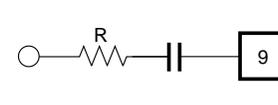

$$G_{SP} \approx 20 * \text{LOG} \frac{32k}{1k + R} \text{ (dB)}$$

(4) Gain between PM BEEP IN and SP OUT 1 / SP OUT 2

This is calculated as follows.

$$G_{SB} \approx 20 * \text{LOG} \frac{20k}{1k + R} \text{ (dB)}$$

(BA7786FP-Y only, BA7787FS: pin 8)

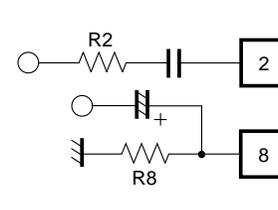

This path is output regardless of whether LIN MIX ON / OFF is at the high or low level.

(5) Gain between LINE IN L and LCH OUT

(BA7786FP-Y)

This gain ( $G_{HL}$ ) is calculated as follows.

$$G_{HL} \approx 20 * \text{LOG} \frac{R8}{2 * R2} \text{ (dB)}$$

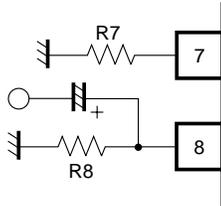

This path is not controlled by EVR or the mute function.

(6) Output level between SYSTEM BEEP IN and LCH OUT (BA7786FP-Y)

Inputting a pulse wave to SYSTEM BEEP IN causes LCH OUT to output a pulse wave. The output level of this pulse wave depends on the resistance between pin 7 and GND and between pin 8 and GND, and is calculated as follows.

$$V_{HS} \doteq 0.25 * \frac{V_{CC} - 0.7}{13k + R7} * R8 \quad (V_{P-P})$$

This path is not controlled by EVR or the mute function.

(7) EVR control characteristics

The headphone amplifier is controlled by changing the resistive potential division ratio.

## ●Control pins

## (1) MUTE CTRL

- Turns the headphone mute function on and off.

	Control signal: $V_M$	Note
HP MUTE ON	L	Turns off HP AMP output
HP MUTE OFF	H (OPEN)	—

## (2) HP SUSPEND

- Turns the headphone suspend function on and off.

	Control signal: $V_H$	Note
$\overline{\text{HP SUSPEND}}$	L	The headphone amplifier operates
HP SUSPEND	H	The headphone amplifier turns off

- Because the BA7786FP-Y has a pull-up resistor, this is possible even when open (if at the high level).

## (3) SP SUSPEND

- Turns the speaker suspend function on and off.

	Control signal: $V_S$	Note
$\overline{\text{SP SUSPEND}}$	L	The speaker amplifier operates
SP SUSPEND	H	The speaker amplifier turns off

- Because the BA7786FP-Y has a pull-up resistor, this is possible even when open (if at the high level).

## (4) LINE MIX ON / OFF

- Turns the SP IN input on and off according to SP OUT.

	Control signal: $V_L$	Note
LINE MIX OFF	L	Stops the output of SP IN input to SP OUT
LINE MIX ON	H (OPEN)	—

## (5) MONO / STEREO (BA7786FP-Y)

- Turns SP AMP LCH on and off.

	Control signal: $V_N$	Note
SP AMP LCH OFF	L	SP AMP LCH turns off
SP AMP LCH ON	H (OPEN)	SP AMP LCH operates

R15	• The load resistor for HP OUT L.	100 $\Omega$
C1	• The coupling capacitor for LINE IN L	0.1 $\mu$ F
C2	• The coupling capacitor for LINE IN R	0.1 $\mu$ F
C3	• The ripple rejection capacitor for the bias pin	47 $\mu$ F
C4	• The coupling capacitor for SYSTEM BEEP IN	0.1 $\mu$ F
C5	• The coupling capacitor for SP IN	0.1 $\mu$ F
C6	• The coupling capacitor for PM BEEP IN	0.1 $\mu$ F
C7	• The bypass capacitor for SP V <sub>cc</sub> (used for low-frequency ripple rejection)	100 $\mu$ F
C8	• The bypass capacitor for SP V <sub>cc</sub> (used for high-frequency ripple rejection)	0.1 $\mu$ F
C9	• The coupling capacitor for HP OUT R	47 $\mu$ F
C10	• The coupling capacitor for HP OUT L	47 $\mu$ F
C11	• The bypass capacitor for HP V <sub>cc</sub> (used for low-frequency ripple rejection)	100 $\mu$ F
C12	• The bypass capacitor for HP V <sub>cc</sub> (used for high-frequency ripple rejection)	0.1 $\mu$ F
VR1	• Used to change the pin 1 DC voltage	20k $\Omega$

## ● Operation notes

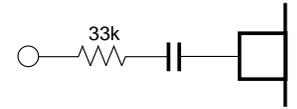

(1) Popping noises occurring when the power is turned on

- When the power is turned on, the headphone mute function should be on and the suspend function off in order to prevent popping noises from occurring when  $V_{CC}$  turns on.

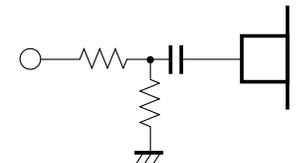

(2) The supply voltages for HP  $V_{CC}$  and SP  $V_{CC}$  should come from the same power supply. Using separate power supplies can lead to output voltage drops and malfunctioning.

(3) The common impedance of the two power supply lines (HP  $V_{CC}$  and SP  $V_{CC}$ ) should be kept as low as possible.

(4) Make sure the input resistance for the SYSTEM BEEP IN pin is  $33k\Omega$ .

(5) Configure the PM BEEP IN pin of BA7786FP-Y as shown below in order to prevent oscillation in the IC.

(6) The LCH OUT pin (pin 8) of BA7786FP-Y should be grounded when not used.

(7) When switching the suspend function popping noises may occur. If this bothers, take measures for eliminating it by attaching external components.

●Board labelling diagram  
BA7786FP-Y

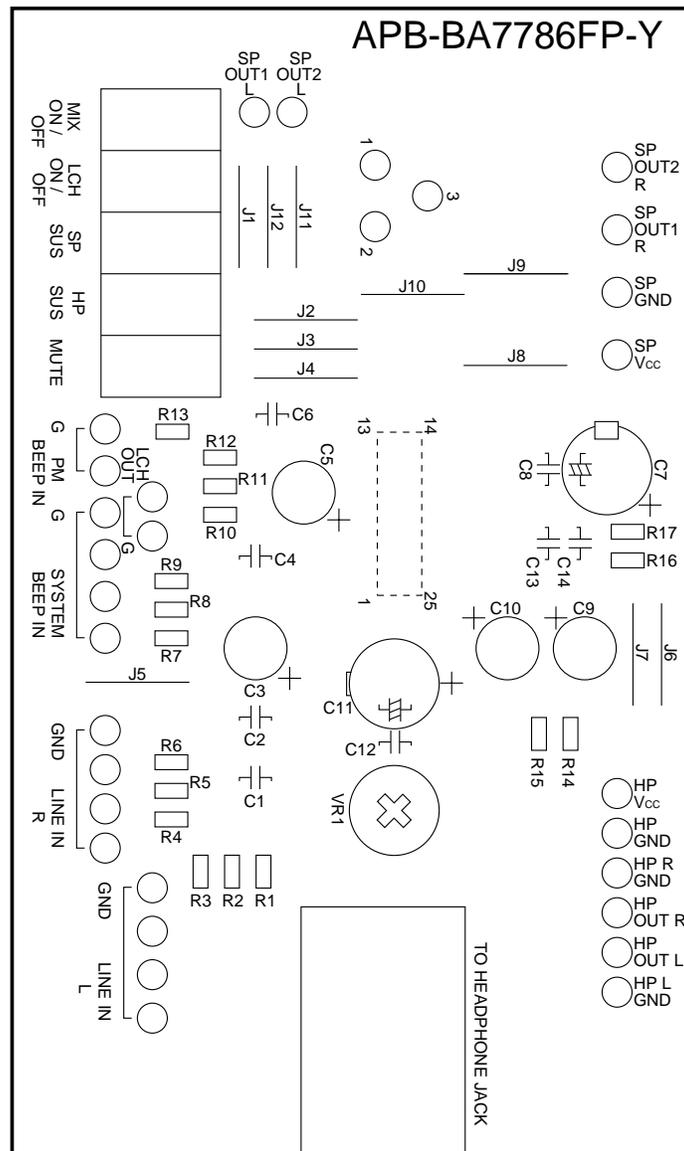

Fig. 15

- LINE IN L: Line input Lch
- LINE IN R: Line input Rch
- SYSTEM BEEP IN: System beep sound input
- PM BEEP IN: PM beep sound input
- HP OUT L: Headphone output Lch monitor
- HP OUT R: Headphone output Rch monitor
- SP OUT L 1 / 2: Speaker connection pin (BTL)
- SP OUT R 1 / 2: Speaker connection pin (BTL)
- SP V<sub>cc</sub>: Supply voltage input + 5.0V
- HP V<sub>cc</sub>: Supply voltage input + 5.0V

- VR1: Electric volume adjuster va  
(On this board, G<sub>HP</sub> is set to its maximum by turning the volume adjuster clockwise as far as it will go.)
- MUTE: MUTE control switch
- HP SUS: HP suspend control switch
- SP SUS: SP suspend control switch
- MIX ON / OFF: LINE MIX ON / OFF switch  
(On this board, pin 12 automatically drops to the ground level when a headphone is plugged into the jack.)
- LCH ON / OFF: SP AMP LCH ON / OFF switch
