

1.62V to 3.6V Improved High-Speed LLT

General Description

The MAX13042E–MAX13045E 4-channel, bidirectional level translators provide the level shifting necessary for 100Mbps data transfer in multivoltage systems. The MAX13042E–MAX13045E are ideally suited for level translation in systems with four channels. Externally applied voltages, V_{CC} and V_L , set the logic levels on either side of the device. Logic signals present on the V_L side of the device appear as a high-voltage logic signal on the V_{CC} side of the device and vice-versa.

The MAX13042E–MAX13045E operate at full speed with external drivers that source as little as 4mA output current or larger. Each input/output (I/O) channel is pulled up to V_{CC} or V_L by an internal 30 μ A current source, allowing the MAX13042E–MAX13045E to be driven by either push-pull or open-drain drivers.

The MAX13042E–MAX13045E feature an enable (EN) input that places the devices into a low-power shutdown mode when driven low. The MAX13042E–MAX13045E feature an automatic shutdown mode that disables the part when V_{CC} is less than V_L . The state of I/O V_{CC} and I/O V_L during shutdown is chosen by selecting the appropriate part version. (See the *Ordering Information/Selector Guide*).

The MAX13042E–MAX13045E operate with V_{CC} voltages from +2.2V to +3.6V and V_L voltages from +1.62V to +3.2V, making them ideal for data transfer between low-voltage ASIC/PLDs and higher voltage systems. The MAX13042E–MAX13045E are available in 12-bump UCSP™ (1.54mm x 2.12mm) and 14-pin TDFN (3mm x 3mm) packages, and operate over the extended -40°C to +85°C temperature range.

Applications

CMOS Logic-Level Translation	Portable POS Systems
Low-Voltage ASIC Level Translation	Portable Communication Devices
Cell Phones	GPS
SPI™, MICROWIRE™ Level Translation	Telecommunications Equipment

Features

- ◆ Compatible with 4mA Input Drivers or Larger
- ◆ 100Mbps Guaranteed Data Rate
- ◆ Four Bidirectional Channels
- ◆ Enable Input
- ◆ ± 15 kV ESD Protection on I/O V_{CC} Lines
- ◆ $+1.62\text{V} \leq V_L \leq +3.2\text{V}$ and $+2.2\text{V} \leq V_{CC} \leq +3.6\text{V}$ Supply Voltage Range
- ◆ 12-Bump UCSP (1.54mm x 2.12mm) and 14-Pin TDFN (3mm x 3mm) Lead-Free Packages

Typical Operating Circuit

UCSP is a trademark of Maxim Integrated Products, Inc.
SPI is a trademark of Motorola, Inc.
MICROWIRE is a trademark of National Semiconductor Corp.

Pin Configurations appear at end of data sheet.

Ordering Information/Selector Guide continued at end of data sheet.

Maximum Data Rate		Push-pull operation	100			Mbps

Note 1: All units are 100% production tested at $T_A = +25^\circ C$. Limits over the operating temperature range are guaranteed by correlation and design and not production tested.

Note 2: V_L must be less than or equal to V_{CC} during normal operation. However, V_L can be greater than V_{CC} during startup and shutdown conditions.

Note 3: When V_{CC} is below V_L by more than the $V_L - V_{CC}$ shutdown threshold, the device turns off its pullup generators and the I/Os enter their respective shutdown states.

Note 4: Guaranteed by design.

Note 5: Input thresholds are referenced to the boost circuit.

Typical Operating Characteristics

($V_{CC} = 3.3V$, $V_L = 1.8V$, $C_{IOVCC} = 10pF$, $C_{IOVL} = 15pF$, $R_{SOURCE} = 150\Omega$, data rate = 100Mbps, push-pull driver, $T_A = +25^\circ C$, unless otherwise noted.)

Functional Diagram

Detailed Description

The MAX13042E-MAX13045E 4-channel, bidirectional level translators provide the level shifting necessary for 100Mbps data transfer in multivoltage systems. The MAX13042E-MAX13045E are ideally suited for level translation in systems with four channels. Externally applied voltages, V_{CC} and V_L , set the logic levels on either side of the device. Logic signals present on the V_L side of the device appear as a high-voltage logic signal on the V_{CC} side of the device and vice-versa.

The MAX13042E-MAX13045E operate at full speed with external drivers that source as little as 4mA output current. Each I/O channel is pulled up to V_{CC} or V_L by an internal 30 μ A current source, allowing the MAX13042E-MAX13045E to be driven by either push-pull or open-drain drivers.

The MAX13042E-MAX13045E feature an enable (EN) input that places the devices into a low-power shutdown mode when driven low. The MAX13042E-MAX13045E

feature an automatic shutdown mode that disables the part when V_{CC} is less than V_L . The state of I/O V_{CC} and I/O V_L during shutdown is chosen by selecting the appropriate part version (see the *Ordering Information/Selector Guide*).

The MAX13042E-MAX13045E operate with V_{CC} voltages from +2.2V to +3.6V and V_L voltages from +1.62V to +3.2V.

Level Translation

For proper operation, ensure that $+2.2V \leq V_{CC} \leq +3.6V$, $+1.62V \leq V_L \leq V_{CC} - 0.2V$. When power is supplied to V_L while V_{CC} is missing or less than V_L , the MAX13042E-MAX13045E automatically enter a low-power mode. The devices will also enter shutdown mode when $EN = 0V$. This allows V_{CC} to be disconnected and still have a known state on I/O V_L . The maximum data rate depends heavily on the load capacitance (see the Rise/Fall Time vs. Capacitive Load graphs in the *Typical Operating Characteristics*), output impedance of the driver, and the operating voltage range.

Input Driver Requirements

The MAX13042E-MAX13045E architecture is based on an nMOS pass gate and output accelerator stages (Figure 6). The accelerators are active only when there is a rising/falling edge on a given I/O. A short pulse is then generated where the output accelerator stages become active and charge/discharge the capacitances at the I/Os. Due to its architecture, both input stages become active during the one-shot pulse. This can lead to current feeding into the external source that is driving the translator. However, this behavior helps to speed up the transition on the driven side.

The MAX13042E-MAX13045E have internal current sources capable of sourcing 30 μ A to pull up the I/O lines. These internal-pullup current sources allow the inputs to be driven with open-drain drivers as well as push-pull drivers. It is not recommended to use external pullup resistors on the I/O lines. The architecture of the MAX13042E-MAX13045E permits either side to be driven with a minimum of 4mA drivers or larger.

Output Load Requirements

The MAX13042E-MAX13045E I/O are designed to drive CMOS inputs. Do not load the I/O lines with a resistive load less than 25k Ω and do not place an RC circuit at the input of these devices to slow down the edges. If a slower rise/fall time is required, refer to the MAX3000E/MAX3001E logic-level translator data sheet.

1.62V to 3.6V Improved High-Speed LLT

Figure 4. Simplified Functional Diagram for One I/O Line

Shutdown Mode

The MAX13042E-MAX13045E feature an enable (EN) input that places the devices into a low-power shutdown mode when driven low. The MAX13042E-MAX13045E feature an automatic shutdown mode that disables the part when V_{CC} is unconnected or less than V_L .

Applications Information

Layout Recommendations

Use standard high-speed layout practices when laying out a board with the MAX13042E-MAX13045E. For example, to minimize line coupling, place all other signal lines not connected to the MAX13042E-MAX13045E at least 1x the substrate height of the PCB away from the input and output lines of the MAX13042E-MAX13045E.

Power-Supply Decoupling

To reduce ripple and the chance of introducing data errors, bypass V_L and V_{CC} to ground with 0.1µF ceramic capacitors. Place all capacitors as close to the power-supply inputs as possible. For full ESD protection, bypass V_{CC} with a 1µF ceramic capacitor located as close to the V_{CC} input as possible.

Unidirectional vs. Bidirectional Level Translator

The MAX13042E-MAX13045E bidirectional level translators can operate as a unidirectional device to trans-

late signals without inversion. These devices provide the smallest solution (UCSP package) for unidirectional level translation without inversion.

ESD Test Conditions

ESD performance depends on a variety of conditions. Contact Maxim for a reliability report that documents test setup, test methodology, and test results.

Use with External Pullup/Pulldown Resistors

Due to the architecture of the MAX13042E-MAX13045E, it is not recommended to use external pullup or pulldown resistors on the bus. In certain applications, the use of external pullup or pulldown resistors is desired to have a known bus state when there is no active driver on the bus. The MAX13042E-MAX13045E include internal pullup current sources that set the bus state when the device is enabled. In shutdown mode, the state of I/O V_{CC} and I/O V_L is dependent on the selected part version (see the *Ordering Information/Selector Guide*).

Open-Drain Signaling

The MAX13042E-MAX13045E are designed to pass open-drain as well as CMOS push-pull signals. When used with open-drain signaling, the rise time will be dominated by the interaction of the internal pullup current source and the parasitic load capacitance. The MAX13042E-MAX13045E include internal rise-time accelerators to speed up transitions, eliminating any need for external pullup resistors. For applications such as I²C or 1-wire that require an external pullup resistor, please consult the MAX3378E and MAX3396E data sheets.

UCSP Applications Information

For the latest application details on UCSP construction, dimensions, tape carrier information, PCB techniques, bump-pad layout, and recommended reflow temperature profiles, as well as the latest information on reliability testing results, go to Maxim's website at www.maxim-ic.com/ucsp to find the Application Note: *UCSP – A Wafer-Level Chip-Scale Package*.

T1433-2	14	1.70±0.10	2.30±0.10	0.40 BSC	----	0.20±0.05	2.40 REF	

NOTES:

1. ALL DIMENSIONS ARE IN mm. ANGLES IN DEGREES.
2. COPLANARITY SHALL NOT EXCEED 0.08 mm.
3. WARPAGE SHALL NOT EXCEED 0.10 mm.
4. PACKAGE LENGTH/PACKAGE WIDTH ARE CONSIDERED AS SPECIAL CHARACTERISTIC(S).
5. DRAWING CONFORMS TO JEDEC MO229, EXCEPT DIMENSIONS "D2" AND "E2", AND T1433-1 & T1433-2.
6. "N" IS THE TOTAL NUMBER OF LEADS.
7. NUMBER OF LEADS SHOWN ARE FOR REFERENCE ONLY.
8. MARKING IS FOR PACKAGE ORIENTATION REFERENCE ONLY.

—DRAWING NOT TO SCALE—

		
TITLE: PACKAGE OUTLINE, 6,8,10 & 14L, TDFN, EXPOSED PAD, 3x3x0.80 mm		
APPROVAL	DOCUMENT CONTROL NO. 21-0137	REV. I 2/2

Maxim cannot assume responsibility for use of any circuitry other than circuitry entirely embodied in a Maxim product. No circuit patent licenses are implied. Maxim reserves the right to change the circuitry and specifications without notice at any time.
