3.3V CMOS 12-BIT UNIVERSAL BUS DRIVER WITH PARITY CHECKER, DUAL 3-STATE OUTPUTS AND BUS-HOLD

IDT74ALVCH16903

FEATURES:

- **0.5 MICRON CMOS Technology**
- **Typical $t_{SK(o)}$ (Output Skew) < 250ps**
- **ESD > 2000V per MIL-STD-883, Method 3015; > 200V using machine model (C = 200pF, R = 0)**
- **V_{CC} = 3.3V ± 0.3V, Normal Range**
- **V_{CC} = 2.7V to 3.6V, Extended Range**
- **V_{CC} = 2.5V ± 0.2V**
- **CMOS power levels (0.4µ W typ. static)**
- **Rail-to-Rail output swing for increased noise margin**
- **Available in TSSOP package**

DRIVE FEATURES:

- **High Output Drivers: ±24mA**
- **Suitable for heavy loads**

ABSOLUTE MAXIMUM RATINGS(1)

Symbol	Description	Max	Unit
V_{TERM}(2)	Terminal Voltage with Respect to GND	–0.5 to +4.6	V
V_{TERM}(3)	Terminal Voltage with Respect to GND (Outputs Only)	–0.5 to V_{CC}+0.5	V
T_{STG}	Storage Temperature	–65 to +150	°C
I_{OUT}	DC Output Current	–50 to +50	mA
I_{IK}	Continuous Clamp Current, V_I < 0 or V_I > V_{CC}	±50	mA
I_{OK}	Continuous Clamp Current, V_O < 0	–50	mA
I_{CC} I_{SS}	Continuous Current through each V_{CC} or GND	±100	mA

NOTES:

1. Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.
2. V_{CC} terminals.
3. This value is limited to 4.6V maximum.

CAPACITANCE (T_A = +25°C, F = 1.0MHz)

Symbol	Parameter(1)	Conditions	Typ.	Max.	Unit
C_{IN}	Input Capacitance	V_{IN} = 0V	5	7	pF
C_{OUT}	Output Capacitance	V_{OUT} = 0V	7	9	pF
C_{OUT}	I/O Port Capacitance	V_{IN} = 0V	7	9	pF

NOTE:

1. As applicable to the device type.

DESCRIPTION:

This 12-bit universal bus driver is built using advanced dual metal CMOS technology. This device has dual outputs and can operate as a buffer or an edge-triggered register. In both modes, parity is checked on APAR, which arrives one cycle after the data to which it applies. The $\overline{YERR}$ output, which is produced one cycle after APAR, is open drain.

MODE selects one of the two data paths. When MODE is low, the device operates as an edge-triggered register. On the positive transition of the clock (CLK) input and when the clock-enable ($\overline{CLKEN}$) input is low, data setup at the A inputs is stored in the internal registers. On the positive transition of CLK and when $\overline{CLKEN}$ is high, only data setup at the 9A-12A inputs is stored in their internal registers. When MODE is high, the device operates as a buffer and data at the A inputs passes directly to the outputs. The 11A/$\overline{YERREN}$ serves a dual purpose; it acts as a normal data bit and also enables $\overline{YERR}$ data to be clocked into the $\overline{YERR}$ output register.

When used as a single device, parity output enable ($\overline{PAROE}$) must be tied high; when parity input/output (PARI/O) is low, even parity is selected and when PARI/O is high, odd parity is selected. When used in pairs and $\overline{PAROE}$ is low, the parity sum is output on PARI/O for cascading to the second ALVCH16903. When used in pairs and $\overline{PAROE}$ is high, PARI/O accepts a partial parity sum from the first ALVCH16903.

A buffered output-enable ($\overline{OE}$) input can be used to place the 24 outputs and $\overline{YERR}$ in either a normal logic state (high or low logic levels) or a high-impedance state. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance state and increased drive provide the capability to drive bus lines without need for interface or pullup components.

The ALVCH16903 has been designed with a ±24mA output driver. This driver is capable of driving a moderate to heavy load while maintaining speed performance.

The ALVCH16903 has "bus-hold" which retains the inputs' last state whenever the input bus goes to a high-impedance. This prevents floating inputs and eliminates the need for pull-up/down resistors.

APPLICATIONS:

- **3.3V high speed systems**
- **3.3V and lower voltage computing systems**
