### DESCRIPTION

The ISSI IS62C256AL/IS65C256AL is a low power, 32,768 word by 8-bit CMOS static RAM. It is fabricated using ISSI's high-performance, low power CMOS technology.

When  $\overline{CE}$  is HIGH (deselected), the device assumes a standby mode at which the power dissipation can be reduced down to 150  $\mu$ W (typical) at CMOS input levels.

Easy memory expansion is provided by using an active LOW Chip Select ( $\overline{CE}$ ) input and an active LOW Output Enable ( $\overline{OE}$ ) input. The active LOW Write Enable ( $\overline{WE}$ ) controls both writing and reading of the memory.

The IS62C256AL/IS65C256AL is pin compatible with other 32Kx8 SRAMs in plastic SOP or TSOP (Type I) package.
