## Features

- Compact, moisture resistant package
- Low LED current
- Passive resistance output

## Description

This optocoupler consists of an LED input optically coupled to a photocell. The photocell resistance is high when the LED current is "off" and low when the LED current is "on".

## Absolute Maximum Ratings

Operating Temperature Soldering Temperature (2) Isolation Voltage (peak)

Note: (1) Derate linearly to 0 at $75^{\circ} \mathrm{C}$
(2) $>2 \mathrm{~mm}$ from case for $<5 \mathrm{sec}$.
(3) measured after a dark history of 1 week.
(4) The Rise Time, $T_{R}$, is the time required for the dark to light change in conductance to reach $63 \%$ [ie. (1-1/e)] of its final value.
