

0.9V Operation Fundamental Quartz Crystal Oscillator IC

■GENERAL DESCRIPTION

The NJU6315 series is C-MOS quartz crystal oscillator IC for fundamental (up to 50MHz) oscillation.

The operating voltage is from 0.9V to 3.3V, and the pad layout is suitable for wire bonding mount of existing-sized ceramic package.

The 5-stage divider generates only one frequency selected of f_0 , $f_0/2$, $f_0/4$, $f_0/8$, $f_0/16$ and $f_0/32$ by internal circuits is output.

The oscillation amplifier is realized very low stand-by current using NAND circuit.

Furthermore, The 3-state output buffer is C-MOS compatible.

Note2) If the supply voltage(V_{DD}) is less than 3.6V, the input voltage must not over the V_{DD} level though 3.6V is limit specified.

Note3) Decoupling capacitor should be connected between V_{DD} and V_{SS} due to the stabilized operation for the circuit.

Note4) Please handle with care because of sensitive to ESD.
