TOSHIBA AC SWITCH OPTICALLY ISOLATED AC SWITCH

TSA3100G, TSA3100J

R.M.S. On-State Current

 $: I_{T(RMS)} = 0.1 \sim 3A$

Repetitive Peak Off-State Voltage

 $: V_{DRM} = 400, 600V$

Isolation Voltage between Input to Output: 3000VAC (t=1min.)

Thickness of Inner Insulation Material : 0.8mm (Min.)

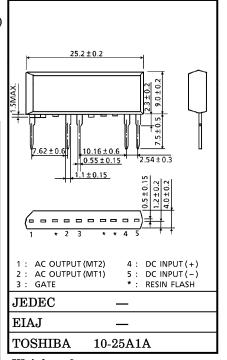

Creepage Distances, Clearances for Insulation between Input and Output Side

: 6mm (Min.)

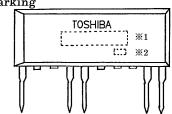

TTL drive is Available

Note 1: When the voltage larger than applied AC voltage is applied to the device such as 2

phase motor and others, please derating for this maximum rating value. TEST CONDITION...AC, t=60s, $RH \le 60\%$

Note 3: Soldering of printed wiring board should be used under 260°C and 10 seconds.

TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

PHASE CONTROL APPLICATION

In case of using in phase control application. Δt must be at least 1ms (Δt : The time starting from the end of INPUT SIGNAL "point a" to the point at which load current become ZERO "point b"). And, Load current "IT" at "point a" must be at least double the maximum Holding Current (IH) specification in each operating temperature.
