## azbil

# Single Loop Controller SDC35/36

#### Features

The DigitroniK SDC35/36 is a digital indicating controller featuring multi-range inputs and PID control system using new algorithms "RationaLOOP" and "Just-FiTTER". Up to two control output points (this number of points may vary depending on the model) can be used, which are selectable from the relay contact, voltage pulse, continuous voltage, and current.

The smart loader package ensures easy setting operation and monitoring.

This controller is compliant to the IEC directives and the CE marking.

- Space saving design with a depth of 65mm. The mask of the front panel is also only 5mm thick.
- High accuracy of ±0.1%FS and sampling cycle of 0.1s (seconds).
- Multi-range inputs are available for selection, where the input type can be freely changed among thermocouple, RTD, current, and voltage.
- The control method can be selected from any of the ON/ OFF control and PID control using "RationaLOOP" + "Just-FiTTER".

- The heat/cool control can be achieved using two control output points and event outputs.
- The RS-485 communication function is provided as an optional function.
- The control output types available for selection are relay, voltage pulse, current, and continuous voltage outputs which can be combined.
- Event 3 points or 2 points (independent contact), CT input 2 points, DI 4 points, and RSP inputs, RS-485 can be selected in combination.
- The smart loader package (SLP-C35) can be used.

## Basic Function Block of SDC35/36

## Specifications

PV input	Input type	Multi-range of inputs -	thermoc	ouple, RTD,	DC current and DC vo	oltage				
	Input sampling time	100ms								
	Input impedance	DC voltage input: Min.	1MΩ, DC	current inp	ut: Max. 100Ω					
	Input bias	-1999 to +9999 or -199								
	Input bias current		+0.2µA o			(Note 1)				
	•	RTD input:	+1mA typ	oical		RTD or A-wire	e burnout:			
				or less 1 to 5V rand	μA or less je 3.5μA or less		cale + AL01			
				range 7µA		B-wire or C-w	ire burnout:			
	Burnout indication	RTD input: DC voltage input:	Downsca (However	+ alarm disp le + AL02 r, the burnou	lay (Note 1)	More than 2-w	cale + AL01, AL03 vire burnout: cale + AL01, AL03			
			Downsca (However	to 10V rangle + AL02 r, the burnou to 20mA ra	it cannot be detected					
	Allowable input current	DC current input: Max.	30mA							
	Allowable input voltage	DC current input: Max. 4V (a higher voltage might cause device failure)								
	Cold junction	±0.5°C (at an ambient temperature of 23±2°C )								
	compensation accuracy	±1.0°C (at an ambient ±1.5°C (at an ambient								
	Cold junction compensation method	Compensation inside o			,	ment can be selected.				
Motor feedback	Allowable resistance	100 to 2500Ω								
potentiometer input (RI model)	Burnout detection	AL07 indication								
RSP input	Input type	Linear 0 to 2-0mA/4 to								
	Scaling	Possible in a range of	-1999 to	+9999. It is	also possible to set the	ne decimal point positi	on.			
	Sampling cycle	100ms								
	Input impedance	DC voltage input: Min. 1MΩ, DC current input: Max/ 100Ω								
	Input bias current	DC voltage input: 0 to 5V, 1 to 5V range. Max. 3μA 0 to 10V range Max. 5μA								
	Burnout indication	DC voltage input: Downscale +AL06 DC current input: Down scale + AL06 (However, the burnout cannot be detected in a range of 0 to 20mA)								
	Allowable input current		DC current input: Max. 30mA							
	Allowable input voltage	DC current input: Max.								
Indications	PV, SP indication method	4-digit, 7-segment LED (PV: Upper green display, SP: Lower orange display)								
and setting	Number of setting points	Max. 8 points								
	Setting range	Lower to higher limit value of the PV range (Restriction by SP lower limit to upper limit possible)								
	Multi-status indicator	The control output status, alarm or RUN/READY status is indicated.								
	Indication accuracy	$\pm 0.1\%$ FS $\pm 1$ digit In the negative area of the thermocouple, the accuracy is $\pm 0.2\%$ FS $\pm 1$ digit (at an ambient temperature of $23\pm 2^{\circ}$ C.)								
Control output	Indication range	See Table 1.			Valtana nulas sutnut	Oursent output

#### **!** Handling Precautions

- The accuracy is ±0.1%FS±1 digit, and ±0.2%FS±1 digit for a negative area of the thermocouple.
- The accuracy varies according to the range. The accuracy of the No.15 (sensor type R) or No. 16 (sensor type S) is ±0.2%FS for a range of 100°C or less, and ±0.15%FS for 100 to 1600°C.

The accuracy of the No.17 (sensor type B) is  $\pm 4.0\%$ FS for a range of 260°C or less,  $\pm 0.4\%$ FS for 260 to 800°C and  $\pm 0.2\%$ FS for 800 to 1800°C.

The accuracy of the No.23 (sensor type PR40-20) is  $\pm 2.5\%$  FS for 0 to 300°C,  $\pm 1.5\%$  FS for 300 to 800°C,  $\pm 0.5\%$  FS for 800 to 1900°C.

The accuracy of the No.26 (sensor type golden iron chromel) is  $\pm 1.5 \text{K}.$ 

The accuracy of the No. 55 to 62 and 81 is  $\pm 0.15\% FS$  for each range.

• For ranges with a decimal point, tenths are displayed on the line underneath point.

Input type	C01 No.	Sensor type	Range			
RTD	41	Pt100	-200.0 to +500.0°C	-300 to +900°F		
	42	JPt100	-200.0 to +500.0°C	-300 to +900°F		
	43	Pt100	-200.0 to +200.0°C	-300 to +400°F		
	44	JPt100	-200.0 to +200.0°C	-300 to +400°F		
	45	Pt100	-100.0 to +300.0°C	-150 to +500°F		
	46	JPt100	-100.0 to +300.0°C	-150 to +500°F		
	47	Pt100	-100.0 to +200.0°C	-150 to +400°F		
	48	JPt100	-100.0 to +200.0°C	-150 to +400°F		
	49	Pt100	-100.0 to +150.0°C	-150 to +300°F

Input type	C01 No.	Sensor type	Range
Linear	81	0 to 10mV	Scaling in the range of -1999 to +9999
input	82	10 to +10mV	Decimal point position changeable
	83	0 to 100mV	
	84	0 to 1V	
	86	1 to 5V	
	87	0 to 5V	
	88	0 to 10V	
	89	0 to 20mA	
	90	4 to 20mA	

### ■ Model Selection Guide

I	II	III	IV	v	VI	VII	VIII				
Basic model No.	Mount- ing	Control output	PV input	Power supply	Option 1	Option 2	Additional process- ing	Specifi	Specifications		
C35								Mask size 48mm x 96mm			
C36								Mask size 96mm x 96mm			
	т							Panel mounting type			
								Control output 1	Control output 2		
		R0						Relay contact output	_		
		R1						Relay contact output for motor drive		With MF	
		VO						Voltage pulse output (for SSR drive)			
		VC						Voltage pulse output (for SSR drive)	Current output		
		VD						Voltage pulse output (for SSR drive)	Continuous voltage output		
		vv						Voltage pulse output (for SSR drive)	Voltage pulse output (for SSR drive)		
		C0						Current output	_		
		СС						Current output	Current output		
		CD						Current output	Continuous voltage output		
		D0						Continuous voltage output			
		DD						Continuous voltage output	Continuous voltage output		
			U					Universal			
				Α				AC model (100 to 240Vac) 50/60Hz	<u>.</u>		
				D				DC model (24Vac/dc) (available so	on)		
					1			Event relay output: 3 points			
					2			Event relay output: 3 points, Auxilia	ry output (current output)		
					3			Event relay output: 3 points, Auxilia	ry output (voltage output)		
				(Note 3)	4			Event relay output: 2 points (indepe	endent contact)		
				(Note 3)	5			Event relay output: 2 points (indepe Auxiliary output (current output)	endent contact),		
				(Note 3)	6			Event relay output: 2 points (indepe Auxiliary output (voltage output)	endent contact),		
						0		-	_		
				(N	ote 1, 2)	1		Current transformer inputs: 2 points	s, Digital inputs: 4 points		
				(N	ote 1, 2)	2		Current transformer inputs: 2 points RS-485 communication	s, Digital inputs: 4 points,		
				(N	ote 1, 2)	3		Current transformer inputs: 2 points	s, Digital inputs: 2 points, RSP input		
				(N	ote 1, 2)	4		Current transformer inputs: 2 points RS-485 communication	s, Digital inputs: 2 points, RSP input,		
							00	No additional processing		İ	
							D0	Inspection Certificate provided			
							YO	Complying with the traceability cert	ification		

I II III IV V VI VII VIII Example: C35TR0UA1000

Note 1. A current transformer is sold separately.

Note 2. When the control output is R1, the current transformer input is not applied. MFB input is applied.

Note 3. Can not be selected for DC model.

#### Dimensions

#### • C35

• C36

Handling Precautions

To fasten this controller onto the panel, tighten a mounting bracket screws, and turn one more half turn when there is no play between the bracket and panel. Excessively tightening the screws may deform the controller case.

#### • Panel cutout diagram

• When three or more units are gang-mounted horizontally, the maximum allowable ambient temperature is 40°C.

(Unit: mm)

#### Part Names and Functions

- (1) Upper display: Displays PV values (present temperature, etc.) or setup items.
- (2) Lower display: Displays SP values (set temperature, etc.) and other parameter values. When the lower display shows the SP value, the "sp" lamp lights up. When the display shows the manipulated variable (MV), the "out" lamp lights up.
- (3) Mode indicator Lights when MANUAL (manual mode). man: Lights when RSP mode (remote setup rsp: input). ev1 to ev3: Lights when event relays are ON. ot1, ot2: Lights when the control output is ON. (4) Multi-status indicator: In the combination of the lighting condition and the lighting status as a group, the priority 3 groups can be set. The operation which has been set be-(5) [mode] key: forehand can be done by pushing the key for 1s or more. (6) [display] key: Used to change the display contents in the operation display mode. Display is returned from bank setup display to operation display.  $(7) < , \lor , \land$ key: Used for incrementing numeric values and performing arithmetic shift operations. (8) [para] key: Switches the display. (9) [enter] keys: Used to set the setup values at the start of change and during the change. (10) Loader connector: Connects to a personal computer by
  - using a dedicated cable supplied with the Smart Loader Package.

#### Connection of C35/36

• **Precautions on the use of self-tuning function** The final control devices must be powered up simultaneously with or prior to the instrument when the self-tuning function is to be used.

#### Precautions on wiring

#### 1. Isolation within instrument

Solid line portions " —— " are isolated. Dotted line portions "-----" are not isolated.

Power supply		Control output 1
PV input	-	Control output 2
CT input 1	i .	Auxiliary output
CT input 2		
MFB input	1	
Loader communication	Internal	
Digital input 1	Circuit	Event output 1 (Note 1)
Digital input 2		Event output 2 (Note 1)
Digital input 3		Event output 3
Digital input 4		
RS-485 Communication		
RSP input		

Availability of input and output is based on a model.

Note 1 In case of independent contact, the part between the event output 1 and the event output 2 is isolated.

#### 2. Preventive measures against noise of instrument power supply

(1) Reduction of noise

Even though the noise is small, the noise filter is used to eliminate the effect of the noise as much as possible.

#### (2) When noise is excessive

If a large amount of noise exists, appropriate isolation transformer and line filter are used to eliminate the effect of the noise. Line filter

## 3. Installation environment noise sources and preventive measures

Generally, the following may be the noise sources in the installation environment:

Relay and contact, electromagnetic coil, solenoid valve, power supply line (particularly, 100Vac or more), motor commutator, phase angle control SCR, radio communication device, welding machine, high-voltage ignitor, etc.

#### Preventive measures against fast rise noise

Use of CR filter is effective to prevent fast rise noise. Recommended filter:

Yamatake's model No. **81446365-001** (Equivalent to 953M500333311 made by Matsuo Electric.)

#### 4. Wiring precautions

- After taking the noise preventive measures, do not bundle the primary and secondary power cables together or put both power cables in the same conduit or duct.
- (2) Keep the input/output and communication lines 50 cm or more away from the power lines and power supply lines having a voltage of 100Vac or more. Additionally, do not put these lines together in the same conduit or duct.

#### 5. Inspection after wiring

After the wiring work has been completed, always inspect and check the wiring status. Great care should be taken since incorrect wiring may cause the instrument to malfunction or severe personal injury.

## 1 RESTRICTIONS ON USE

This product has been designed, developed and manufactured for general-purpose application in machinery and equipment. Accordingly, when used in the applications outlined below, special care should be taken to implement a fail-safe and/or redundant design concept as well as a periodic maintenance program.

• Safety devices for plant worker protection • Start/stop control devices for transportation and material handling machines

- Aeronautical/aerospace machines
   Control devic
- Control devices for nuclear reactors

Never use this product in applications where human safety may be put at risk.

Specifications are subject to change without notice.
