

## SINGLE POWER SUPPLY QUAD COMPARATORS

### <R> DESCRIPTION

The μPC177GR-9LG, μPC339GR-9LG are quad comparators which are designed to operate for a single power supply. It includes features of low-voltage operation, a common-mode input voltage that range from  $V^-$  (GND) level, an open collector output, and low current consumption. Furthermore, these products can operate on a split power supply and be used for an extensive comparison of various voltages.

The μPC177GR-9LG which expands temperature type is suited for wide operating ambient temperature use, and μPC339GR-9LG is used for general purposes.

A DC parameter selection that is compatible to comparators is also available.

μPC277GR-9LG, μPC277MP-KAA, μPC393GR-9LG which are dual types with the same circuit configuration are also available as series of comparators.

### <R> FEATURES

- Input Offset Voltage       $\pm 1$  mV (TYP.)
- Input Bias Current      20 nA (TYP.)
- Voltage Gain      200000 (TYP.)
- Pulse Response Time      1.6  $\mu$ s (TYP.)
- Output Sink Current      16 mA (TYP.)
- Small Package (The mounting area is reduced to half compared to the conventional 14-pin plastic SOP (1.27 mm pitch))
- A wired OR is possible as the open collector is output.
- A low voltage operation is possible.  $V^+ - V^-$ : +2 to +32 V

### <R> ORDERING INFORMATION

**Note** Pb-free (This product does not contain Pb in the external electrode and other parts.)

The information in this document is subject to change without notice. Before using this document, please confirm that this is the latest version.

Not all products and/or types are available in every country. Please check with an NEC Electronics sales representative for availability and additional information.

EQUIVALENT CIRCUIT (1/4 Circuit)

<R> PIN CONFIGURATION (Marking side)

<R> ABSOLUTE MAXIMUM RATINGS (TA = 25°C)

Parameter	Symbol	$\mu$ PC177GR-9LG, $\mu$ PC177GR(5)-9LG	$\mu$ PC339GR-9LG, $\mu$ PC339GR(5)-9LG	Unit
Voltage between $V^+$ and $V^-$ <sup>Note1</sup>	$V^+ - V^-$	-0.3 to +36		V
Differential Input Voltage	$V_{ID}$	$\pm 36$		V
Input Voltage <sup>Note2</sup>	$V_I$	$V^- - 0.3$ to $V^- + 36$		V
Output applied Voltage <sup>Note3</sup>	$V_O$	$V^- - 0.3$ to $V^- + 36$		V
Total Power Dissipation <sup>Note4</sup>	$P_T$	550		mW
Output Short Circuit Duration (vs. GND) <sup>Note5</sup>	$t_s$	Indefinite		s
Operating Ambient Temperature	$T_A$	-40 to +125	-40 to +85	°C
Storage Temperature	$T_{stg}$	-55 to +150	-55 to +125	°C

**Note1.** Note that reverse connections of the power supply may damage ICs.

2. The input voltage is allowed to input without damage or destruction independent of the magnitude of  $V^+$ . Either input signal is not allowed to go negative by more than 0.3 V. In addition, the input voltage that operates normally as a comparator is within the Common Mode Input Voltage range of an electrical characteristic.

3. A range where input voltage can be applied to an output pin externally with no deterioration or damage to the feature (characteristic). The input voltage can be applied regardless of the electric supply voltage. This specification which includes the transition state such as electric power ON/OFF must be kept.

4. This is the value of when the glass epoxy substrate (size: 100 mm x 100 mm, thickness: 1 mm, 15% of the substrate area where only one side is copper foiled is filling wired) is mounted.

Note that restrictions will be made to the following conditions for each product, and the derating ratio depending on the operating ambient temperature.

$\mu$ PC177GR-9LG: Derate at -7.0 mW/°C when  $T_A > 71^\circ\text{C}$ .

(Junction - ambient thermal resistance  $R_{th(J-A)} = 144^\circ\text{C/W}$ )

$\mu$ PC339GR-9LG: Derate at -7.0 mW/°C when  $T_A > 46^\circ\text{C}$ .

(Junction - ambient thermal resistance  $R_{th(J-A)} = 144^\circ\text{C/W}$ )

5. Short circuits from the output to  $V^+$  can cause destruction. Pay careful attention to the total power dissipation not to exceed the absolute maximum ratings, **Note 4**.

# RECOMMENDED OPERATING CONDITIONS

Parameter	Symbol	MIN.	TYP.	MAX.	Unit
Power Supply Voltage (Split)	$V^{\pm}$	±1		±16	V
Power Supply Voltage ( $V^- = \text{GND}$ )	$V^+$	+2		+32	V

## <R> ELECTRICAL CHARACTERISTICS

### μPC177GR-9LG, μPC339GR-9LG ( $T_A = 25^{\circ}\text{C}$ , $V^+ = +5\text{ V}$ , $V^- = \text{GND}$ )

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Input Offset Voltage	$V_{IO}$	$V_O = 1.4\text{ V}$ , $V_{REF} = 1.4\text{ V}$ , $R_S = 0\ \Omega$		±1	±5	mV
Input Offset Current	$I_{IO}$	$V_O = 1.4\text{ V}$		±5	±50	nA
Input Bias Current <sup>Note1</sup>	$I_B$	$V_O = 1.4\text{ V}$		20	250	nA
Voltage Gain	$A_V$	$R_L = 15\text{ k}\Omega$		200000		
Circuit Current <sup>Note2</sup>	$I_{CC}$	$R_L = \infty$ , $I_O = 0\text{ A}$		1.1	2	mA
Common Mode Input Voltage Range	$V_{ICM}$		0		$V^+ - 1.5$	V
Output Saturation Voltage	$V_{OL}$	$V_{IN(-)} = +1\text{ V}$ , $V_{IN(+)} = 0\text{ V}$ , $I_{O\text{ SINK}} = 4\text{ mA}$		0.2	0.4	V
Output Sink Current	$I_{O\text{ SINK}}$	$V_{IN(-)} = +1\text{ V}$ , $V_{IN(+)} = 0\text{ V}$ , $V_O \leq 1.5\text{ V}$	6	16		mA
Output Leakage Current	$I_{O\text{ LEAK}}$	$V_{IN(+)} = +1\text{ V}$ , $V_{IN(-)} = 0\text{ V}$ , $V_O = 5\text{ V}$		0.1		nA
Pulse Response Time <sup>Note3</sup>		$R_L = 5.1\text{ k}\Omega$ , $V_{RL} = 5\text{ V}$		1.6		μs

### μPC177GR(5)-9LG, μPC339GR(5)-9LG ( $T_A = 25^{\circ}\text{C}$ , $V^+ = +5\text{ V}$ , $V^- = \text{GND}$ )

Parameter	Symbol	Conditions	MIN.	TYP.	MAX.	Unit
Input Offset Voltage	$V_{IO}$	$V_O = 1.4\text{ V}$ , $V_{REF} = 1.4\text{ V}$ , $R_S = 0\ \Omega$		±1	±2.5	mV
Input Offset Current	$I_{IO}$	$V_O = 1.4\text{ V}$		±5	±50	nA
Input Bias Current <sup>Note1</sup>	$I_B$	$V_O = 1.4\text{ V}$		20	60	nA
Voltage Gain	$A_V$	$R_L = 15\text{ k}\Omega$		200000		
Circuit Current <sup>Note2</sup>	$I_{CC}$	$R_L = \infty$ , $I_O = 0\text{ A}$		1.1	1.2	mA
Common Mode Input Voltage Range	$V_{ICM}$		0		$V^+ - 1.4$	V
Output Saturation Voltage	$V_{OL1}$	$V_{IN(-)} = +1\text{ V}$ , $V_{IN(+)} = 0\text{ V}$ , $I_{O\text{ SINK}} = 4\text{ mA}$			0.2	V
	$V_{OL2}$	$V_{IN(-)} = +1\text{ V}$ , $V_{IN(+)} = 0\text{ V}$ , $I_{O\text{ SINK}} = 10\text{ mA}$			1.5	V
Output Sink Current	$I_{O\text{ SINK}}$	$V_{IN(-)} = +1\text{ V}$ , $V_{IN(+)} = 0\text{ V}$ , $V_O \leq 1.5\text{ V}$	10	16		mA
Output Leakage Current	$I_{O\text{ LEAK}}$	$V_{IN(+)} = +1\text{ V}$ , $V_{IN(-)} = 0\text{ V}$ , $V_O = 5\text{ V}$		0.1	100	nA
Pulse Response Time <sup>Note3</sup>		$R_L = 5.1\text{ k}\Omega$ , $V_{RL} = 5\text{ V}$		1.6		μs

**Notes1.** The input bias current flows in the direction where the IC flows out because the first stage is configured with a PNP transistor.

In addition, the value of this item is a value of when the differential amplified circuit of the input stage is balanced. When the comparator is active, then twice the amount of current will flow to a pin with low potential.

**2.** This is a current that flows in the internal circuit. This current will flow irrespective of the channel used.

**3.** This is the value when input oscillation is 100 mV and the over drive is 5 mV.

If the amount of over drive is increased then the response time can be cut down.

# TYPICAL APPLICATION CIRCUIT EXAMPLE

$V_{REF}$ :  $V^-$  to  $V^+ - 1.5$  (V)

## Comparator with hysteresis

- Threshold voltage

$$V_{TH(High)} \cong V_{REF} + \frac{R_1}{R_L + R_2 + R_1} (V_{RL} - V_{REF})$$

$$V_{TH(Low)} \cong V_{REF} - \frac{R_1}{R_1 + R_2} (V_{REF} - V_{OL})$$

$$(V_{RL} > V_{REF} > V_{OL})$$

(OUTPUT FALL)

PULSE RESPONSE II  
(OUTPUT RISE)

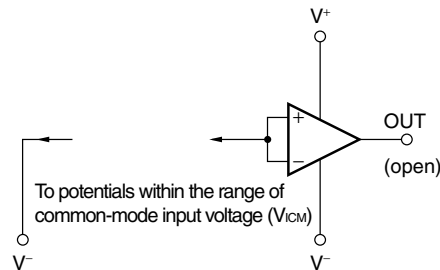

## <R> PRECAUTIONS FOR USE

### O The process of unused circuits

If there is an unused circuit, the following connection is recommended.

#### Process example of unused circuits

### O Ratings of input/output pin voltage

When the voltage of input/output pin exceeds the absolute maximum rating, it may cause degradation of characteristics or damages, by a conduction of a parasitic diode within an IC. In addition, when the input/output pin may be lower than  $V^-$ , it is recommended to make a clamp circuit by a diode whose forward voltage is low (e.g.: Schottky diode) for protection.

### O Range of common-mode input voltage

When the supply voltage does not meet the condition of electrical characteristics, the range of common-mode input voltage is as follows.

$$V_{ICM} \text{ (TYP.)}: V^- \text{ to } V^+ - 1.5 \text{ (V) } (T_A = 25^\circ\text{C})$$

During designing, temperature characteristics for use with allowance.

### O Range of Input Current

The "Input Bias Current [ $I_B$ ]" of the electric feature specification list is specified in accordance with the operation amplifier. It is an average value of the current that flows in the +input pin [ $I_N$ ] and the -input pin [ $I_I$ ] when the differential amplified circuit of an input stage is balanced (negative feedback is provided).

Therefore, because the differential amplified circuit of the input stage will not be balanced during comparison (when comparator is active), the input current will flow, with twice the amount of current, to a pin with low potential.

### O Handling of ICs

When stress is added to ICs due to warpage or bending of a board, the characteristic fluctuates due to piezoelectric effect. Therefore, pay attention to warpage or bending of a board.

## <R> RECOMMENDED SOLDERING CONDITIONS

The μPC177GR-9LG, μPC339GR-9LG should be soldered and mounted under the following recommended conditions.

For soldering methods and conditions other than those recommended below, contact an NEC Electronics sales representative.

For technical information, see the following website.

**Semiconductor Device Mount Manual** (<http://www.necel.com/pkg/en/mount/index.html>)

### Type of Surface Mount Device

μPC177GR-9LG-A<sup>Note</sup>, μPC177GR(5)-9LG-A<sup>Note</sup>,  
μPC339GR-9LG-A<sup>Note</sup>, μPC339GR(5)-9LG-A<sup>Note</sup>: 14-pin plastic TSSOP (5.72 mm (225))

Process	Conditions	Symbol
Infrared ray reflow	Peak temperature: 260°C, Reflow time: 60 seconds or less (at 220°C or higher), Maximum number of reflow processes: 3 times.	IR60-00-3
Wave soldering	Solder temperature: 260°C or below, Flow time: 10 seconds or less, Maximum number of flow processes: 1 time, Pre-heating temperature: 120°C or below (Package surface temperature).	WS60-00-1
Partial heating method	Pin temperature: 350°C or below, Heat time: 3 seconds or less (Per each side of the device).	P350

**Note** Pb-free (This product does not contain Pb in external electrode and other parts.)

**Caution** Apply only one kind of soldering condition to a device, except for “partial heating method”, or the device will be damaged by heat stress.

**Remark** Flux: Rosin flux with low chlorine (0.2 Wt% or below) recommended.

- No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC Electronics. NEC Electronics assumes no responsibility for any errors that may appear in this document.
- NEC Electronics does not assume any liability for infringement of patents, copyrights or other intellectual property rights of third parties by or arising from the use of NEC Electronics products listed in this document or any other liability arising from the use of such products. No license, express, implied or otherwise, is granted under any patents, copyrights or other intellectual property rights of NEC Electronics or others.
- Descriptions of circuits, software and other related information in this document are provided for illustrative purposes in semiconductor product operation and application examples. The incorporation of these circuits, software and information in the design of a customer's equipment shall be done under the full responsibility of the customer. NEC Electronics assumes no responsibility for any losses incurred by customers or third parties arising from the use of these circuits, software and information.
- While NEC Electronics endeavors to enhance the quality, reliability and safety of NEC Electronics products, customers agree and acknowledge that the possibility of defects thereof cannot be eliminated entirely. To minimize risks of damage to property or injury (including death) to persons arising from defects in NEC Electronics products, customers must incorporate sufficient safety measures in their design, such as redundancy, fire-containment and anti-failure features.
- NEC Electronics products are classified into the following three quality grades: "Standard", "Special" and "Specific".

The "Specific" quality grade applies only to NEC Electronics products developed based on a customer-designated "quality assurance program" for a specific application. The recommended applications of an NEC Electronics product depend on its quality grade, as indicated below. Customers must check the quality grade of each NEC Electronics product before using it in a particular application.

"Standard": Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment and industrial robots.

"Special": Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment and medical equipment (not specifically designed for life support).

"Specific": Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems and medical equipment for life support, etc.

The quality grade of NEC Electronics products is "Standard" unless otherwise expressly specified in NEC Electronics data sheets or data books, etc. If customers wish to use NEC Electronics products in applications not intended by NEC Electronics, they must contact an NEC Electronics sales representative in advance to determine NEC Electronics' willingness to support a given application.

(Note)

- (1) "NEC Electronics" as used in this statement means NEC Electronics Corporation and also includes its majority-owned subsidiaries.
- (2) "NEC Electronics products" means any product developed or manufactured by or for NEC Electronics (as defined above).
