

# BIPOLAR ANALOG INTEGRATED CIRCUIT

# $\mu$ PC814

## DUAL J-FET INPUT LOW-OFF SET OPERATIONAL AMPLIFIER

### DESCRIPTION

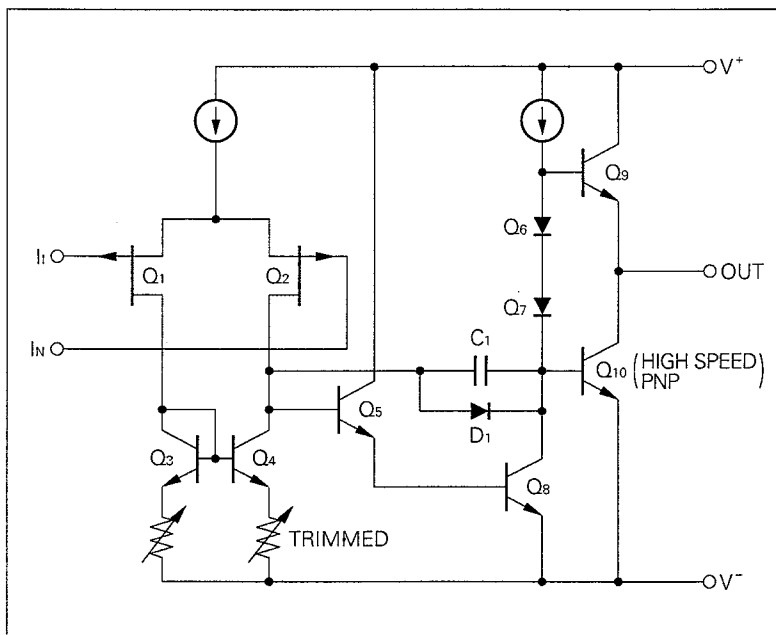

Dual operational amplifier  $\mu$ PC814 is a high-speed version of the  $\mu$ PC812. NEC's unique high-speed PNP transistor ( $f_T = 300$  MHz) in the output stage yields a high slew rate of  $25$  V/ $\mu$ s under voltage-follower conditions without an oscillation problem. Zener-zap resistor trimming in the input stage produces excellent offset voltage and temperature drift characteristics.

Having AC performance characteristics that are two times better than conventional bi-FET op amps, the  $\mu$ PC814 is ideal for fast integrators, active filters, and other high-speed circuit applications.

### FEATURES

- High slew rate:  $25$  V/ $\mu$ s (TYP.)
- Stable operation with  $220$  pF capacitive load
- Low input offset voltage  
 $\pm 3$  mV (MAX.)
- $\pm 7$   $\mu$ V/ $^{\circ}$ C (TYP.) temperature drift
- Very low input bias and offset currents
- Low noise:  $e_n = 19$  nV/ $\sqrt{\text{Hz}}$  (TYP.)
- Output short circuit protection
- High input impedance ... J-FET Input Stage
- Internal frequency compensation

**Note 1.** Reverse connection of supply voltage can cause destruction.

**Note 2.** The input voltage should be allowed to input without damage or destruction. Even during the transition period of supply voltage, power on/off etc., this specification should be kept. The normal operation will establish when the both inputs are within the Common Mode Input Voltage Range of electrical characteristics.

**Note 3.** This specification is the voltage which should be allowed to supply to the output terminal from external without damage or destructive. Even during the transition period of supply voltage, power on/off etc., this specification should be kept. The output voltage of normal operation will be the Output Voltage Swing of electrical characteristics.

**Note 4.** Thermal derating factor is -5.0 mW / °C when ambient temperature is higher than 55 °C.

**Note 5.** Thermal derating factor is -4.4 mW / °C when ambient temperature is higher than 25 °C.

**Note 6.** Pay careful attention to the total power dissipation not to exceed the absolute maximum ratings, Note 4 and Note 5.

**RECOMMENDED SOLDERING CONDITIONS**

The following conditions (see table below) must be met when soldering this product.  
Please consult with our sales offices in case other soldering process is used, or in case soldering is done under different conditions.

**TYPES OF SURFACE MOUNT DEVICE**

For more details, refer to our document "SEMICONDUCTOR DEVICE MOUNTING TECHNOLOGY MANUAL" (IEI-1207).
