

## PLL FM MULTIPLEXER STEREO DEMODULATOR

### DESCRIPTION

The SA3375 is a multiplex IC for FM car stereos. It integrates two functions: skip-noise prevention and pilot canceling.

### FEATURES

- \* Low distortion
- \* Power supply ripple rejection
- \* Wide operating voltage range

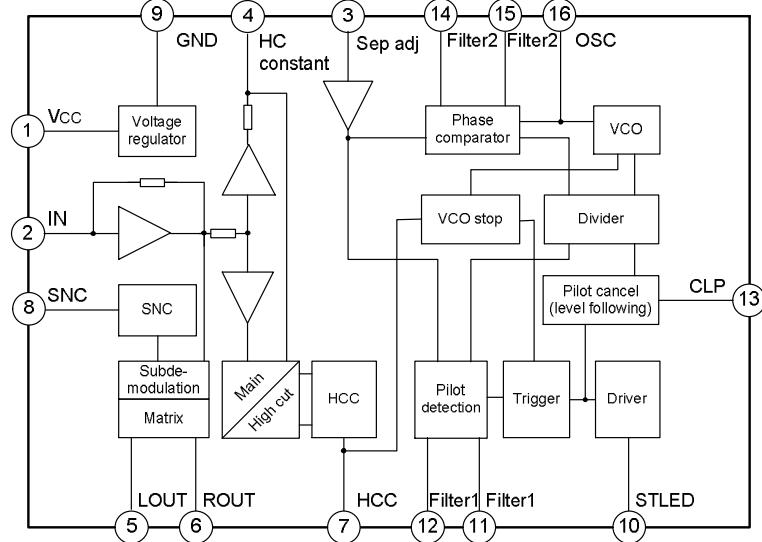

### APPLICATIONS

- \* FM stereo receivers

**PIN CONFIGURATIONS**

**PIN DESCRIPTIONS**

Pin no.	Pin name	Description
1	VCC	Power supply.
2	IN	Composite input
3	SEP Adj	Connected to semi-fixed resistor
4	HC constant	Connector to capacitor
5	LOUT	Out of L channel
6	ROUT	Out of R channel
7	HCC	High –cut control
8	SNC	Stereo noise control
9	GND	Ground
10	STLED	Stereo lamp
11, 12	FILTER1	Filter of pilot detector
13	CLP	Pilot cancel adjust
14, 15	FILTER2	Filter of phase comparator
16	OSC	VCO OSC

**FUNCTION DESCRIPTION**
**1. SNC and HCC**

The SA3375 has SNC (stereo noise control) and HCC (high-cut control) terminals for improving S/N ratios when operating in weak radio fields.

**2. Pilot canceling circuit**

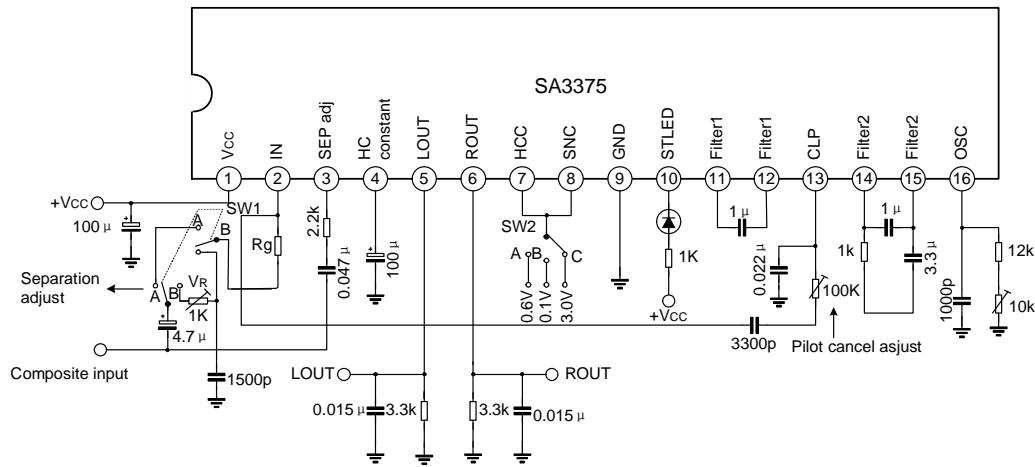

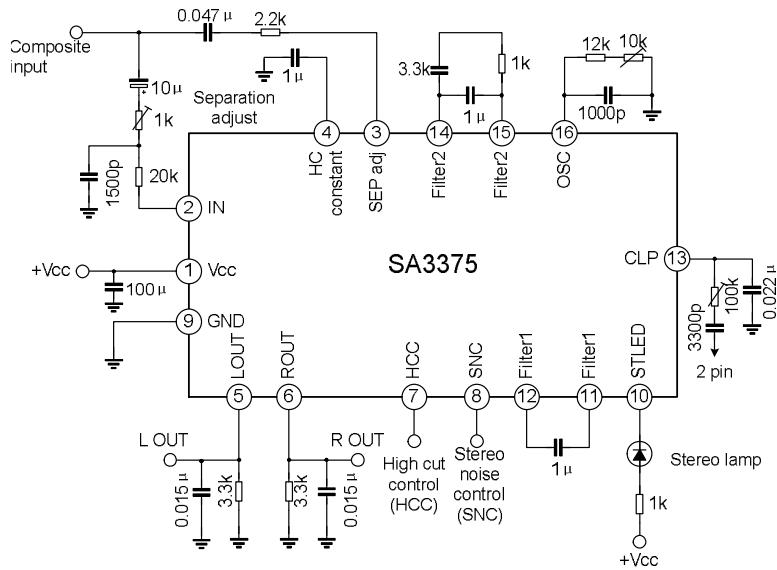

Cancelling signal is a sawtooth wave obtained by integrating a square wave that is proportionate in amplitude to pilot level with C and R.

**3. Separation adjustments**

The SA3375 by itself exhibits separation only in a 25 to 30 dB range. If a phase correction circuit is provided in the SA3375 input circuit, it can exhibit intrinsic separation characteristics, typically 50 dB.

**4. VCO stopped**

When applying a voltage not less than 7 V to the HCC terminal (pin 7), VCO will be stopped and SA3375 will work in monaural mode.
