

Frequency Generator & Integrated Buffers for PENTIUM™

General Description

The ICS9148-13 generates all clocks required for high speed RISC or CISC microprocessor systems such as Intel Pentium and PentiumPro. An output enable is provided for testability.

Spread Spectrum is available to modulate the CPU and BUS PLL (leaving the REF, 24, 48 MHz operating normally). The SS_EN# pin enables the spreading when low. The SS_TYPE pin chooses $\pm 0.5\%$ (nominally) center spread or +0, -2% (nominally) downspread modulation.

High drive BUS outputs typically provide greater than 1V/ns slew rate into 30pF loads. CPU outputs typically provide better than 1V/ns slew rate into 20pF loads while maintaining $50 \pm 5\%$ duty cycle. The REF clock outputs typically provide better than 0.8/ns slew rates.

Block Diagram

Features

- Generates twelve processor, six bus, two 14.31818MHz, 24MHz and one 48MHz clock for USB support.
- Synchronous clocks skew matched to 250ps window on CPUs and 500ps window on BUSES
- CPU to BUS skew, 3.0 to 5.0ns (CPU Early)
- 3.0V - 3.7V supply range
- 48-pin SSOP package

Absolute Maximum Ratings

- Supply Voltage..... 7.0 V
- Logic Inputs..... GND -0.5 V to $V_{DD} + 0.5 V$
- Ambient Operating Temperature 0°C to +70°C
- Storage Temperature -65°C to +150°C

Stresses above those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These ratings are stress specifications only and functional operation of the device at these or any other conditions above those listed in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

General Layout Precautions:

- 1) Use a ground plane on the top layer of the PCB in all areas not used by traces.
- 2) Make all power traces and vias as wide as possible to lower inductance.

Notes:

- 1 All clock outputs should have series terminating resistor. Not shown in all places to improve readability of diagram
- 2 Optional EMI capacitor should be used on all CPU, SDRAM, and PCI outputs.
3. Optional crystal load capacitors are recommended

Capacitor Values:

C1, C2: Crystal load values determined by user.
All unmarked capacitors are 0.01µF ceramic
