## Description

The ICS662-02 is a low cost, low jitter, high performance PLL clock synthesizer designed to replace oscillators and PLL circuits in set-top box and multimedia systems. Using ICS' patented analog Phase Locked Loop (PLL) techniques, the device uses a NTSC/PAL reference clock input to produce a selectable audio clock.

ICS manufactures the largest variety of Set-Top Box and multimedia clock synthesizers for all applications. Consult ICS to eliminate VCXOs, crystals and oscillators from your board.
Features

- Packaged in 8 pin SOIC
- Locks to NTSC and PAL colorburst frequencies (4x)
- Audio sampling rate outputs
- Low synthesis error in all clocks
- All frequencies are frequency locked
- Advanced, low power, sub-micron CMOS process
- Operating voltage of 3.3 V

External Components

Decoupling Capacitor

As with any high performance mixed-signal IC, the ICS662-02 must be isolated from system power supply noise to perform optimally.

A decoupling capacitor of 0.01µF must be connected between VDD and GND on pins 2 and 3. It must be connected close to the ICS662-02 to minimize lead inductance. No external power supply filtering is required for the ICS662-02.

Series Termination Resistor

A 33Ω terminating resistor can be used next to the clock outputs for trace lengths over one inch.

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the ICS662-02. These ratings, which are standard values for ICS commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.
