## LOW SKEW 1 TO 4 CLOCK BUFFER

#### ICS621

#### Description

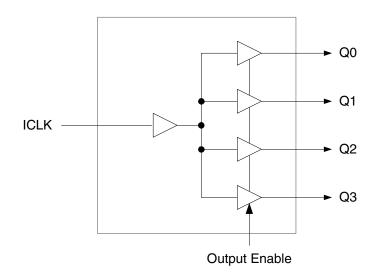

The ICS621 is a low skew, single input to four output, clock buffer. The device operates from a single 1.2 to 1.8 volt supply and has a 3.3 volt tolerant input, making it ideal for level translation.

IDT makes many non-PLL and PLL based low skew output devices as well as Zero Delay Buffers to synchronize clocks. Contact us for all of your clocking needs.

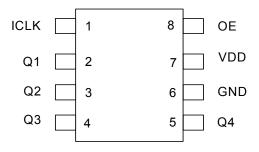

#### Features

- Low skew outputs (150 ps)
- Packaged in 8-pin SOIC or 8-pin DFN (2x2mm)
- Available in RoHS 5 or RoHS 6 (lead-free) package
- Low power CMOS technology
- Operating Voltages of 1.2 V to 1.8 V
- Output Enable pin tri-states outputs
- 3.3 V tolerant input clock
- Industrial or commercial temperature ranges

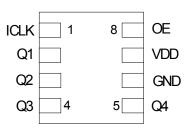

#### **Block Diagram**

### Pin Assignment (8-pin SOIC)

## Pin Assignment (8-pin DFN)

#### **Pin Descriptions**

| Pin<br>Number | Pin<br>Name | Pin<br>Type | Pin Description  |
|---------------|-------------|-------------|--|
| 1             | ICLK        | Input       | Clock Input. 3.3 V tolerant input.   |
| 2             | Q1          | Output      | Clock Output 1.  |
| 3             | Q2          | Output      | Clock Output 2.  |
| 4             | Q3          | Output      | Clock Output 3.  |
| 5             | Q4          | Output      | Clock Output 4.  |
| 6             | GND         | Power       | Connect to ground.   |
| 7             | VDD         | Power       | Connect to +1.2 V or +1.8 V.   |
| 8             | OE          | Input       | Output Enable. Tri-states outputs when low. Connect to VDD for normal operation. |

#### **External Components**

A minimum number of external components are required for proper operation. A decoupling capacitor of 0.01  $\mu$ F should be connected between VDD on pin 7 and GND on pin 6, as close to the device as possible. A 33  $\Omega$  series terminating resistor may be used on each clock output if the trace is longer than 1 inch.

To achieve the low output skew that the ICS621 is capable of, careful attention must be paid to board layout. Essentially, all four outputs must have identical terminations, identical loads and identical trace geometries. If they do not, the output skew will be degraded. For example, using a  $30\Omega$  series termination on one output (with  $33\Omega$  on the others) will cause at least 15 ps of skew.

#### **Absolute Maximum Ratings**

Stresses above the ratings listed below can cause permanent damage to the ICS621. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

| Item                                       | Rating                     |
|--|----------------------------|
| Supply Voltage, VDD                        | 5 V                        |
| Output Enable and All Outputs              | -0.5 V to VDD+0.5 V        |
| ICLK                                       | -0.5 V to 3.6 V (VDD > 0V) |
| Ambient Operating Temperature (industrial) | -40 to +85 °C              |
| Ambient Operating Temperature (commercial) | 0 to +70 °C                |
| Storage Temperature                        | -65 to +150°C              |
| Junction Temperature                       | 125°C                      |
| Soldering Temperature                      | 260°C                      |

#### **Recommended Operation Conditions**

| Parameter   | Min. | Тур. | Max. | Units |
|---|------|------|------|-------|
| Ambient Operating Temperature (industrial)        | -40  |      | +85  | °C    |
| Ambient Operating Temperature (commercial)        | 0    |      | +70  | °C    |
| Power Supply Voltage (measured in respect to GND) | 1.14 |      | 1.89 | V     |
