

SY89855U

Precision Low Power Differential LVPECL 4:1 MUX with 1:2 Fanout and Internal Termination

General Description

The SY89855U is a 2.5V/3.3V precision, high-speed, 4:1 differential multiplexer with 100K LVPECL (800mV) compatible outputs, capable of handling clocks up to 2.5GHz and data streams up to 2.5Gbps. In addition, a 1:2 fanout buffer provides two copies of the selected inputs.

The differential input includes Micrel's unique, 3-pin input termination architecture that allows customers to interface to any differential signal (AC- or DC-coupled) as small as 100mV without any level shifting or termination resistor networks in the signal path. The result is a clean, stub-free, low-jitter interface solution. The outputs are 800mV LVPECL, (100K temperature compensated) with fast rise/fall times guaranteed to be less than 180ps.

The SY89855U operates from a 2.5V $\pm 5\%$ supply or a 3.3V $\pm 10\%$ supply and is guaranteed over the full industrial temperature range of -40°C to $+85^{\circ}\text{C}$. For applications that require higher performance, consider the SY58029U. The SY89855U is part of Micrel's high-speed, Precision Edge[®] product line.

All support documentation can be found on Micrel's web site at www.micrel.com.

Typical Performance

Precision Edge[®]

Features

- Select 1 of 4 differential inputs
- Provides two copies of the selected input
- Low power 260mW ($V_{CC} = 2.5\text{V}$)
- Guaranteed AC performance over temperature and voltage:
 - DC-to->2.5Gbps data rate throughput
 - $<410\text{ps}$ In-to-Q t_{pd}
 - $<180\text{ps}$ t_r / t_f times
- Ultra low-jitter design:
 - $<10\text{ps}_{PP}$ total jitter (clock)
 - $<1\text{ps}_{RMS}$ random jitter
 - $<10\text{ps}_{PP}$ deterministic jitter
 - $<0.7\text{ps}_{RMS}$ crosstalk-induced jitter
- Unique, patent-pending input design minimizes crosstalk
- Accepts an input signal as low as 100mV
- Unique patented input termination and VT pin accepts DC- and AC-coupled inputs (CML, LVPECL, LVDS)
- 800mV 100K LVPECL output swing
- Power supply 2.5V $\pm 5\%$ or 3.3V $\pm 10\%$
- -40°C to $+85^{\circ}\text{C}$ temperature range
- Available in 32-pin (5mm x 5mm) MLF[®] package

Applications

- Redundant clock and/or data distribution
- All SONET/OC-3 to OC-48 clock/data distribution
- Loopback
- All Fibre Channel applications
- All GigE applications

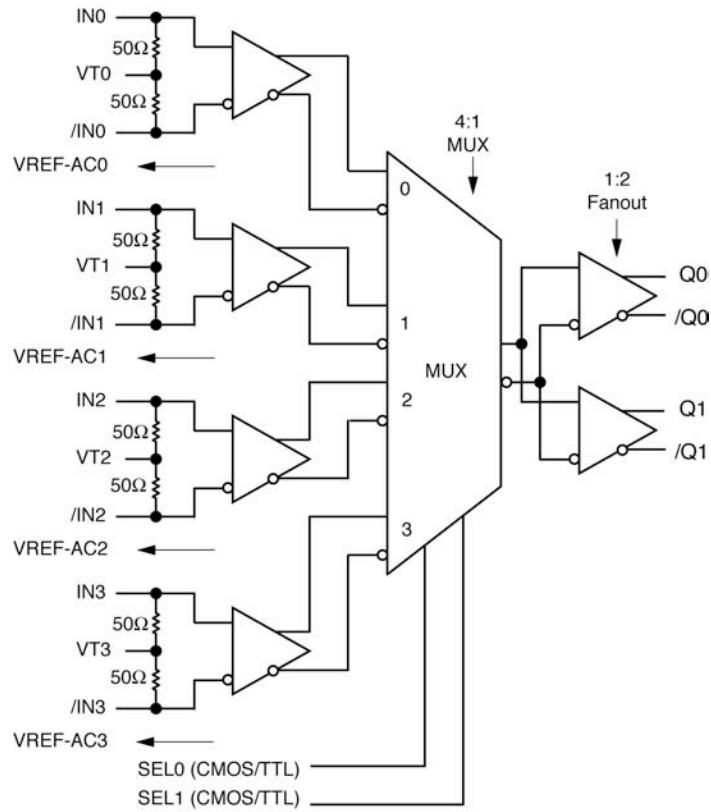

Markets

- LAN/WAN communication
- Enterprise servers
- ATE
- Test and measurement

Notes:

- Contact factory for die availability. Dice are guaranteed at $T_A = 25^\circ\text{C}$, DC Electricals only.
- Tape and Reel.

Pin Configuration

32-Pin MLF[®] (MLF-32)

Pin Description

| Pin Number | Pin Name | Pin Function |
|----------------------------------|---|---|
| 1, 4 5, 8 25, 28 29, 32 | IN0, /IN0, IN1, /IN1, IN2, /IN2, IN3, /IN3 | Differential Input: Each pair accepts AC- or DC-coupled signals as small as 100mV. Each pin of a pair internally terminates to a VT pin through 50Ω. Note that these inputs will default to an indeterminate state if left open. If an input is not used, connect one end of the differential pairs to ground through a 1kΩ resistor, and leave the other end to VCC through an 825Ω resistor. Unused VT and VREF-AC pins may also be left floating. Please refer to the "Input Interface Applications" section for more details. |
| 2, 6 26, 30 | VT0, VT1 VT2, VT3 | Input Termination Center-Tap: Each side of the differential input pair terminates to a VT pin. The VT pin provides a center-tap to the termination network for maximum interface flexibility. See "Input Interface Applications" section for more details. |
| 15, 18 | SEL0, SEL1 | This Single-Ended TTL/CMOS compatible input selects the inputs to the multiplexer. Note that this input is internally connected to a 25kΩ pull-up resistor and will default to a logic HIGH state if left open. Input logic threshold is $V_{CC}/2$. See "Truth Table" for select control. |
| 14, 19 | NC | Not connected. |
| 10, 13, 16 17, 20, 23 | VCC | Positive Power Supply: Bypass with 0.1μF 0.01μF low ESR capacitors placed as close as possible to each VCC pin. |
| 11, 12 21, 22 | /Q0, Q0 /Q1, Q1 | Differential Outputs: These 100K-compatible (internally temperature compensated) LVPECL output pairs are copies of the selected input. Unused output pins may be left floating. See "Output Interface" for terminating guidelines. |
| 9, 24 | GND, Exposed Pad | Ground: Ground pins and exposed pad must be connected to the most negative potential of the chip. |
| 3 7 27 31 | VREF-AC0, VREF-AC1, VREF-AC2, VREF-AC3 | Reference Voltage: This reference output is equivalent to $V_{CC}-1.2\text{V}$. It is used for AC-coupled inputs. When interfacing to AC input signals, connect VREF-AC directly to the VT pin and bypass with a 0.01μF low ESR capacitor to VCC. See "Input Interface Applications" section. Maximum sink/source current is $\pm 1.5\text{mA}$. |

Absolute Maximum Ratings⁽¹⁾

| | | |
|--|-------|-------------------|
| Supply Voltage (V_{CC}) | | -0.5V to +4.0V |
| Input Voltage (V_{IN}) | | -0.5V to V_{CC} |
| LVPECL Output Current (I_{OUT}) | | |
| Continuous | | ± 50 mA |
| Surge | | ± 100 mA |
| Termination Current | | |
| Source or Sink Current on V_T | | ± 100 mA |
| Input Current | | |
| Source or Sink Current on IN, /IN | | ± 50 mA |
| Current (V_{REF-AC}) | | |
| Source or Sink Current on V_{REF-AC} | | ± 2 mA |
| Lead Temperature (soldering, 20sec.) | | 260°C |
| Storage Temperature (T_s) | | -65°C to +150°C |

Operating Ratings⁽²⁾

| | | |
|---|-------|--------------------|
| Supply Voltage (V_{CC}) | | +2.375V to +2.625V |
| | | +3.0V to +3.6V |
| Ambient Temperature (T_A) | | -40°C to +85°C |

| Junction-to-Board | | 16°C/W |

DC Electrical Characteristics⁽⁴⁾

$T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$, unless otherwise noted.

| Symbol | Parameter | Condition | Min | Typ | Max | Units |
|----------------|---|--------------------------|----------------|----------------|----------------|----------|
| V_{CC} | Power Supply Voltage | $V_{CC} = 2.5\text{V}$ | 2.375 | 2.5 | 2.625 | V |
| | | $V_{CC} = 3.3\text{V}$ | 3.0 | 3.3 | 3.6 | V |
| I_{CC} | Power Supply Current | No load, max. V_{CC} . | | 65 | 85 | mA |
| R_{IN} | Input Resistance (IN-to- V_T) | | 45 | 50 | 55 | Ω |
| R_{DIFF_IN} | Differential Input Resistance (IN-to-/IN, /IN-to- V_T) | | 90 | 100 | 110 | Ω |
| V_{IH} | Input High Voltage (IN, /IN) | Note 5 | $V_{CC} - 1.6$ | | V_{CC} | V |
| V_{IL} | Input Low Voltage (IN, /IN) | | 0 | | $V_{IH} - 0.1$ | V |
| V_{IN} | Input Voltage Swing (IN-to-/IN) | See Figure 1a. | 0.1 | | 1.7 | V |
| V_{DIFF_IN} | Differential Input Voltage Swing $ IN - /IN $ | See Figure 1b. | 0.2 | | | V |
| V_{T_IN} | Maximum Input Voltage (IN-to- V_T) | | | | 1.28 | V |
| V_{REF-AC} | Output Reference Voltage | | $V_{CC} - 1.3$ | $V_{CC} - 1.2$ | $V_{CC} - 1.1$ | V |

Notes:

1. Permanent device damage may occur if absolute maximum ratings are exceeded. This is a stress rating only and functional operation is not implied at conditions other than those detailed in the operational sections of this data sheet. Exposure to absolute maximum ratings conditions for extended periods may affect device reliability.
2. The data sheet limits are not guaranteed if the device is operated beyond the operating ratings.
3. Package thermal resistance assumes exposed pad is soldered (or equivalent) to the devices most negative potential on the PCB. θ_{JA} and ψ_{JB} values are determined for a 4-layer board in still-air, unless otherwise stated.
4. The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.
5. V_{IH} (min) not lower than 1.2V.

LVPECL Output DC Electrical Characteristics⁽⁵⁾

$V_{CC} = 2.5V \pm 5\%$ or $3.3V \pm 10\%$; $R_L = 50_\Omega$ to $V_{CC}-2V$; $T_A = -40^\circ C$ to $+85^\circ C$, unless otherwise noted.

| Symbol | Parameter | Condition | Min | Typ | Max | Units |
|----------------|--|----------------|----------------|------|----------------|-------|
| V_{OH} | Output High Voltage (Q, /Q) | | $V_{CC}-1.145$ | | $V_{CC}-0.895$ | V |
| V_{OL} | Output Low Voltage (Q, /Q) | | $V_{CC}-1.945$ | | $V_{CC}-1.695$ | V |
| V_{OUT} | Output Voltage Swing (Q, /Q) | See Figure 1a. | 400 | 800 | | mV |
| $V_{DIFF-OUT}$ | Differential Output Voltage Swing (Q, /Q) | See Figure 1b. | 800 | 1600 | | mV |

LVTTTL/CMOS DC Electrical Characteristics⁽⁵⁾

$V_{CC} = 2.5V \pm 5\%$ or $3.3V \pm 10\%$; $T_A = -40^\circ C$ to $+85^\circ C$, unless otherwise noted.

| Symbol | Parameter | Condition | Min | Typ | Max | Units |
|----------|--------------------|-------------------|------|-----|-----|---------|
| V_{IH} | Input High Voltage | | 2.0 | | | V |
| V_{IL} | Input Low Voltage | | | | 0.8 | V |
| I_{IH} | Input High Current | $V_{IN} = V_{CC}$ | | | 75 | μA |
| I_{IL} | Input Low Current | $V_{IN} = 0.5V$ | -300 | | | μA |

Notes:

- The circuit is designed to meet the DC specifications shown in the above table after thermal equilibrium has been established.

AC Electrical Characteristics⁽⁶⁾

$V_{CC} = 2.5V \pm 5\%$ or $3.3V \pm 10\%$; $T_A = -40^\circ C$ to $+85^\circ C$, $R_L = 50\Omega$ to $V_{CC} - 2V$, unless otherwise stated.

| Symbol | Parameter | Condition | Min | Typ | Max | Units |
|--------------------|---|------------------------------------|-----------------------|-----|-----|-------------------|
| f_{MAX} | Maximum Operating Frequency | NRZ Data | 2.5 | | | Gbps |
| | | Clock, $V_{OUT} > 400mV$ | 2.5 | | | GHz |
| t_{pd} | Propagation Delay IN-to-Q SEL-to-Q | $V_{IN} > 100mV$ | 210 | 300 | 410 | ps |
| | | | 100 | 300 | 500 | ps |
| t_{pd} Tempco | Differential Propagation Delay Temperature Coefficient | | | 234 | | fs/ $^\circ C$ |
| t_{SKEW} | Output-to-Output Part-to-Part | Note 7 | | 9 | 20 | ps |
| | | Note 8 | | | 150 | ps |
| t_{JITTER} | Data Random Jitter (RJ) | Note 9 | | | 1 | ps _{RMS} |
| | Deterministic Jitter (DJ) | Note 10 | | | 10 | ps _{PP} |
| | Clock Cycle-to-Cycle Jitter | Note 11 | | | 1 | ps _{RMS} |
| | Total Jitter (TJ) | Note 12 | | | 10 | ps _{PP} |
| | Crosstalk-induced Jitter (Adjacent Channel) | Note 13 | | | 0.7 | ps _{RMS} |
| | t_r, t_f | Output Rise/Fall Time (20% to 80%) | At full output swing. | 50 | 100 | 180 |

Notes:

- High frequency AC electricals are guaranteed by design and characterization.
- Output-to-output skew is measured between outputs under identical input conditions.
- Part-to-part skew is defined for two parts with identical power supply voltages at the same temperature and with no skew of the edges at the respective inputs.
- Random jitter is measured with a K28.7 character pattern, measured at $<f_{MAX}$.
- Deterministic jitter is measured at 2.5Gbps with both K28.5 and $2^{23}-1$ PRBS pattern.
- Cycle-to-cycle jitter definition: the variation of periods between adjacent cycles, $T_n - T_{n-1}$ where T is the time between rising edges of the output signal.
- Total jitter definition: with an ideal clock input of frequency $<f_{MAX}$, no more than one output edge in 10^{12} output edges will deviate by more than the specified peak-to-peak jitter value.
- Crosstalk is measured at the output while applying two similar differential clock frequencies that are asynchronous with respect to each other at the inputs.

Typical Operating Characteristics

$V_{CC} = 2.5V$, $GND = 0$, $V_{IN} = 100mV$; $T_A = -40^{\circ}C$ to $+85^{\circ}C$, $R_L = 50\Omega$ to $V_{CC}-2V$, unless otherwise stated.

Functional Characteristics

$V_{CC} = 3.3V \pm 10\%$; $T_A = -40^\circ C$ to $+85^\circ C$, $R_L = 50\Omega$ to $V_{CC}-2V$, unless otherwise stated.

Output Interface Applications

LVPECL has high input impedance, very low output impedance (open emitter), and small signal swing, which result in low EMI. LVPECL is ideal for driving 50_ and 100_ controlled impedance transmission lines. There are different techniques for terminating

LVPECL outputs: parallel termination thevenin-equivalent, parallel termination (3-resistor), and AC-coupled termination. Unused output pairs may be left floating; however, single-ended outputs must be terminated or balanced.

Note:

For a 2.5V system, $R1 = 250\Omega$, $R2 = 62.5\Omega$.

Figure 4a. Parallel Thevenin-Equivalent Termination

Note:

1. For a 2.5V system, $R_b = 19\Omega$.

Figure 4b. Parallel Termination (3-Resistor)

Note:

For a 2.5V system, $R = 50_$.

Figure 4c. AC-Coupled Termination

Note:

For a 2.5V system, $R1 = 250_$, $R2 = 62.5_$.
