# 1 $\mu$ A, 4-Bump UCSP/SOT23, Precision Current-Sense Amplifier

MAX9938

## General Description

The MAX9938 high-side current-sense amplifier offers precision accuracy specifications of  $V_{OS}$  less than 500 $\mu$ V (max) and gain error less than 0.5% (max). Quiescent supply current is an ultra-low 1 $\mu$ A. The MAX9938 fits in a tiny, 1mm x 1mm UCSP™ package size or a 5-pin SOT23 package, making the part ideal for applications in notebook computers, cell phones, PDAs, and all battery-operated portable devices where accuracy, low quiescent current, and small size are critical.

The MAX9938 features an input common-mode voltage range from 1.6V to 28V. These current-sense amplifiers have a voltage output and are offered in three gain versions: 25V/V (MAX9938T), 50V/V (MAX9938F), and 100V/V (MAX9938H).

The three gain selections offer flexibility in the choice of the external current-sense resistor. The very low 500 $\mu$ V (max) input offset voltage allows small 25mV to 50mV full-scale  $V_{SENSE}$  voltage for very low voltage drop at full-current measurement.

The MAX9938 is offered in tiny 4-bump, UCSP (1mm x 1mm footprint), 5-pin SOT23, and 6-pin  $\mu$ DFN (2mm x 2mm x 0.8mm) packages specified for operation over the -40°C to +85°C extended temperature range.

## Applications

Cell Phones  
PDAs  
Power Management Systems  
Portable/Battery-Powered Systems  
Notebook Computers

## Features

- ◆ Ultra-Low Supply Current of 1 $\mu$ A (max)
- ◆ Low 500 $\mu$ V (max) Input Offset Voltage
- ◆ Low < 0.5% (max) Gain Error
- ◆ Input Common Mode: +1.6V to +28V
- ◆ Voltage Output
- ◆ Three Gain Versions Available
  - 25V/V (MAX9938T)
  - 50V/V (MAX9938F)
  - 100V/V (MAX9938H)
- ◆ Tiny 1mm x 1mm x 0.6mm, 4-Bump UCSP, 5-Pin SOT23, or 2mm x 2mm 6-Pin  $\mu$ DFN Packages

# 1 $\mu$ A, 4-Bump UCSP/SOT23, Precision Current-Sense Amplifier

## ABSOLUTE MAXIMUM RATINGS

RS+, RS- to GND	-0.3V to +30V
OUT to GND	-0.3V to +6V
RS+ to RS-	$\pm 30V$
Short-Circuit Duration: OUT to GND	Continuous
Continuous Input Current (Any Pin)	$\pm 20mA$
Continuous Power Dissipation ( $T_A = +70^\circ C$ )	
4-Bump UCSP (derate 3.0mW/ $^\circ C$ above $+70^\circ C$ )	238mW
5-Pin SOT23 (derate 3.9mW/ $^\circ C$ above $+70^\circ C$ )	312mW
6-Pin $\mu$ DFN (derate 4.5mW/ $^\circ C$ above $+70^\circ C$ )	358mW

Operating Temperature Range	-40 $^\circ C$ to +85 $^\circ C$
Junction Temperature	+150 $^\circ C$
Storage Temperature Range	-65 $^\circ C$ to +150 $^\circ C$
Bump Temperature (soldering) Reflow	+260 $^\circ C$
Lead Temperature (soldering, 10s)	+300 $^\circ C$
Lead Temperature (reflow)	+260 $^\circ C$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS

( $V_{RS+} = V_{RS-} = 3.6V$ ,  $V_{SENSE} = (V_{RS+} - V_{RS-}) = 0V$ ,  $T_A = -40^\circ C$  to  $+85^\circ C$ , unless otherwise noted. Typical values are at  $T_A = +25^\circ C$ .) (Note 1)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
Supply Current (Note 2)	I <sub>CC</sub>	$V_{RS+} = 5V$ , $T_A = +25^\circ C$		0.5	0.85	$\mu A$
		$V_{RS+} = 5V$ , $-40^\circ C < T_A < +85^\circ C$			1.1	
		$V_{RS+} = 28V$ , $T_A = +25^\circ C$		1.1	1.8	
		$V_{RS+} = 28V$ , $-40^\circ C < T_A < +85^\circ C$			2.5	
Common-Mode Input Range	V <sub>CM</sub>	Guaranteed by CMRR, $-40^\circ C < T_A < +85^\circ C$	1.6		28	V
Common-Mode Rejection Ratio	CMRR	$1.6V < V_{RS+} < 28V$ , $-40^\circ C < T_A < +85^\circ C$	94	130		dB
Input Offset Voltage (Note 3)	V <sub>OS</sub>	$T_A = +25^\circ C$		$\pm 100$	$\pm 500$	$\mu V$
		$-40^\circ C < T_A < +85^\circ C$			$\pm 600$	
Gain	G	MAX9938T		25		V/V
		MAX9938F		50		
		MAX9938H		100		
Gain Error (Note 4)	GE	$T_A = +25^\circ C$		$\pm 0.1$	$\pm 0.5$	%
		$-40^\circ C < T_A < +85^\circ C$			$\pm 0.6$	
Output Resistance	R <sub>OUT</sub>	(Note 5)	7.0	10	13.2	k $\Omega$
OUT Low Voltage	V <sub>OL</sub>	Gain = 25		1.5	15	mV
		Gain = 50		3	30	
		Gain = 100		6	60	
OUT High Voltage	V <sub>OH</sub>	$V_{OH} = V_{RS-} - V_{OUT}$ (Note 6)		0.1	0.2	V
Small-Signal Bandwidth (Note 5)	BW	$V_{SENSE} = 50mV$ , gain = 25		125		kHz
		$V_{SENSE} = 50mV$ , gain = 50		60		
		$V_{SENSE} = 50mV$ , gain = 100		30		
Output Settling Time	t <sub>s</sub>	1% final value, $V_{SENSE} = 50mV$		100		$\mu s$
Power-Up Time	t <sub>ON</sub>	1% final value, $V_{SENSE} = 50mV$		200		$\mu s$

**Note 1:** All devices are 100% production tested at  $T_A = +25^\circ C$ . All temperature limits are guaranteed by design.

**Note 2:**  $V_{OUT} = 0$ . I<sub>CC</sub> is the total current into RS+ plus RS- pins.

**Note 3:** V<sub>OS</sub> is extrapolated from measurements for the gain-error test.

**Note 4:** Gain error is calculated by applying two values of V<sub>SENSE</sub> and calculating the error of the slope vs. the ideal:

Gain = 25, V<sub>SENSE</sub> is 20mV and 120mV.

Gain = 50, V<sub>SENSE</sub> is 10mV and 60mV.

Gain = 100, V<sub>SENSE</sub> is 5mV and 30mV.

**Note 5:** The device is stable for any external capacitance value.

**Note 6:** V<sub>OH</sub> is the voltage from V<sub>RS-</sub> to V<sub>OUT</sub> with V<sub>SENSE</sub> = 3.6V/gain.

## Pin Description

PIN			NAME	FUNCTION
UCSP	SOT23	$\mu$ DFN		
A1	5	4	RS+	External Sense Resistor Power-Side Connection
A2	4	6	RS-	External Sense Resistor Load-Side Connection
B1	1, 2	3	GND	Ground
B2	3	1	OUT	Output Voltage. $V_{OUT}$ is proportional to $V_{SENSE} = V_{RS+} - V_{RS-}$ .
—	—	2, 5	N.C.	No Connection. Not internally connected.

# 1µA, 4-Bump UCSP/SOT23, Precision Current-Sense Amplifier

## Typical Operating Circuit

### Detailed Description

The MAX9938 unidirectional high-side, current-sense amplifier features a 1.6V to 28V input common-mode range. This feature allows the monitoring of current out of a battery with a voltage as low as 1.6V. The MAX9938 monitors current through a current-sense resistor and amplifies the voltage across that resistor.

The MAX9938 is a unidirectional current-sense amplifier that has a well-established history. An op amp is used to force the current through an internal gain resistor at RS+, which has a value of R1, such that its voltage drop equals the voltage drop across an external sense resistor, RSENSE. There is an internal resistor at RS- with the

same value as R1 to minimize offset voltage. The current through R1 is sourced by a high-voltage p-channel FET. Its source current is the same as its drain current, which flows through a second gain resistor, ROUT. This produces an output voltage, VOUT, whose magnitude is  $I_{LOAD} \times R_{SENSE} \times R_{OUT}/R_1$ . The gain accuracy is based on the matching of the two gain resistors R1 and ROUT (see Table 1). Total gain = 25V/V for the MAX9938T, 50V/V for the MAX9938F, and 100V/V for the MAX9938H. The output is protected from input overdrive by use of an output current limiting circuit of 7mA (typical) and a 6V clamp protection circuit.

**Table 1. Internal Gain Setting Resistors (Typical Values)**

GAIN (V/V)	R1 (Ω)	ROUT (kΩ)
100	100	10
50	200	10
25	400	10

### Applications Information

#### Choosing the Sense Resistor

Choose RSENSE based on the following criteria:

#### Voltage Loss

A high RSENSE value causes the power-source voltage to drop due to IR loss. For minimal voltage loss, use the lowest RSENSE value.

# 1μA, 4-Bump UCSP/SOT23, Precision Current-Sense Amplifier

MAX9938

## **OUT Swing vs. $V_{RS+}$ and $V_{SENSE}$**

The MAX9938 is unique since the supply voltage is the input common-mode voltage (the average voltage at  $RS+$  and  $RS-$ ). There is no separate  $V_{CC}$  supply voltage pin. Therefore, the  $V_{OUT}$  voltage swing is limited by the minimum voltage at  $RS+$ .

$V_{OUT}(\max) = V_{RS+}(\min) - V_{SENSE}(\max) - V_{OH}$   
and

$$R_{SENSE} = \frac{V_{OUT}(\max)}{G \times I_{LOAD}(\max)}$$

$V_{SENSE}$  full scale should be less than  $V_{OUT}/\text{gain}$  at the minimum  $RS+$  voltage. For best performance with a 3.6V supply voltage, select  $R_{SENSE}$  to provide approximately 120mV (gain of 25V/V), 60mV (gain of 50V/V), or 30mV (gain of 100V/V) of sense voltage for the full-scale current in each application. These can be increased by use of a higher minimum input voltage.

## **Accuracy**

In the linear region ( $V_{OUT} < V_{OUT}(\max)$ ), there are two components to accuracy: input offset voltage ( $V_{OS}$ ) and gain error (GE). For the MAX9938,  $V_{OS} = 500\mu\text{V}(\max)$  and gain error is 0.5% (max). Use the linear equation:

$$V_{OUT} = (\text{gain} \pm \text{GE}) \times V_{SENSE} \pm (\text{gain} \times V_{OS})$$

to calculate total error. A high  $R_{SENSE}$  value allows lower currents to be measured more accurately because offsets are less significant when the sense voltage is larger.

## **Efficiency and Power Dissipation**

At high current levels, the  $I^2R$  losses in  $R_{SENSE}$  can be significant. Take this into consideration when choosing the resistor value and its power dissipation (wattage) rating. Also, the sense resistor's value might drift if it is allowed to heat up excessively. The precision  $V_{OS}$  of the MAX9938 allows the use of small sense resistors to reduce power dissipation and reduce hot spots.

## **Kelvin Connections**

Because of the high currents that flow through  $R_{SENSE}$ , take care to eliminate parasitic trace resistance from causing errors in the sense voltage. Either use a four-terminal current-sense resistor or use Kelvin (force and sense) PCB layout techniques.

## **Optional Output Filter Capacitor**

When designing a system that uses a sample-and-hold stage in the ADC, the sampling capacitor momentarily loads  $V_{OUT}$  and causes a drop in the output voltage. If sampling time is very short (less than a microsecond), consider using a ceramic capacitor across  $V_{OUT}$  and  $GND$  to hold  $V_{OUT}$  constant during sampling. This also decreases the small-signal bandwidth of the current-sense amplifier and reduces noise at  $V_{OUT}$ .

# 1 $\mu$ A, 4-Bump UCSP/SOT23, Precision Current-Sense Amplifier

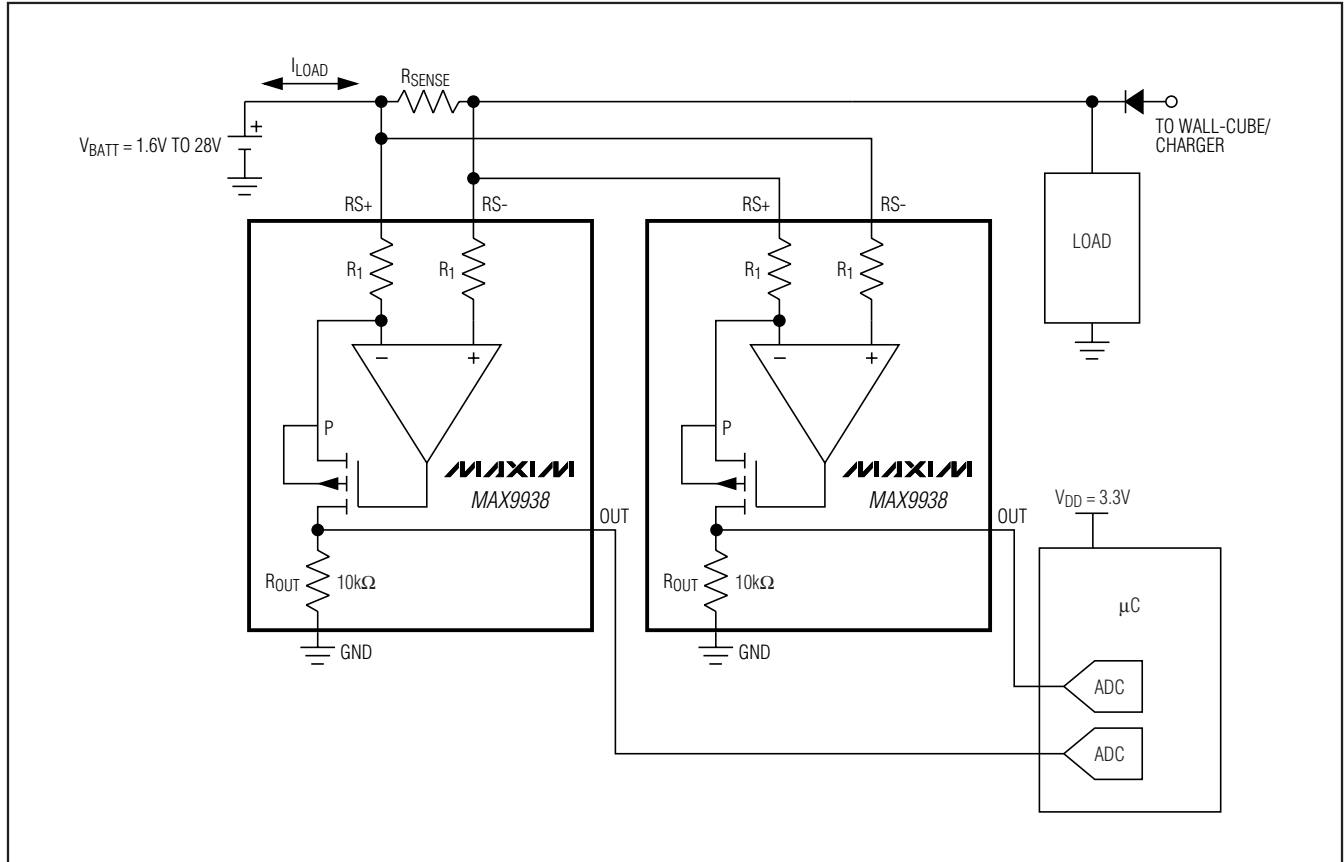

Figure 1. Bidirectional Application

## **Bidirectional Application**

Battery-powered systems may require a precise bidirectional current-sense amplifier to accurately monitor the battery's charge and discharge currents. Measurements of the two separate outputs with respect to GND yields an accurate measure of the charge and discharge currents respectively (Figure 1).
