

## SM843001-212

### ClockWorks™ Fibre Channel, 212.5MHz, Ultra-Low Jitter LVPECL Clock Frequency Synthesizer

#### General Description

The SM843001-212 is a Fibre Channel, 212.5MHz LVPECL clock frequency synthesizer and a member of the ClockWorks™ family of devices from Micrel. It provides a low-noise timing solution for high-speed, high-accuracy synthesis of clock signals. It includes a patented RotaryWave® architecture that provides a stable clock with very low phase noise.

Power supplies of either 2.5V or 3.3V are supported, with superior jitter and phase noise performance. The device synthesizes a 212.5MHz, low-noise, LVPECL output for Fibre Channel applications. The crystal reference frequency used is 26.5625MHz.

The SM843001-212 is an excellent replacement for IDT FemtoClocks®, with improved waveform integrity, and jitter.

Data sheets and support documentation can be found on Micrel's web site at: [www.micrel.com](http://www.micrel.com).
