# MN31121SA

### CCD Image Sensor Vertical Driver IC

#### Overview

The MN31121SA is a 2D interline CCD image sensor vertical driver IC that integrates four vertical driver channels and one SUB drive channel on a single chip. This IC can reduce power consumption and the number of external parts.

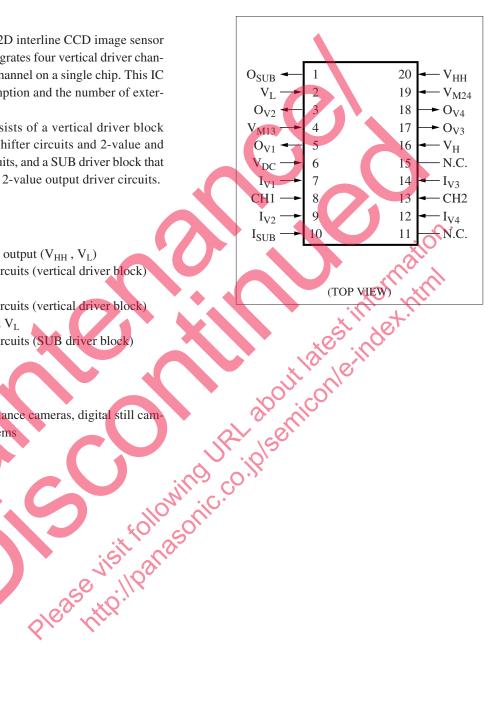

The MN31121SA consists of a vertical driver block that includes both level shifter circuits and 2-value and 3-value output driver circuits, and a SUB driver block that includes level shifter and 2-value output driver circuits.

#### Features

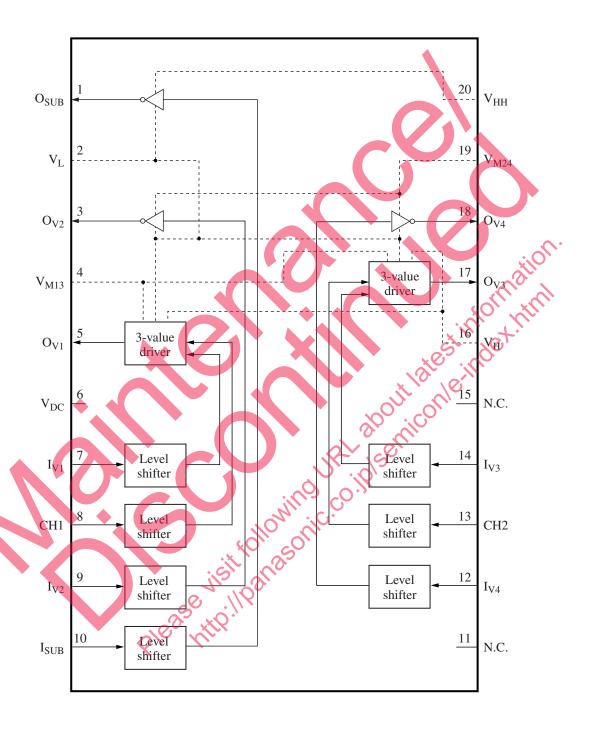

- Level shifter circuits Input  $(V_{DC}, ground) \rightarrow output (V_{HH}, V_L)$
- 2-value output driver circuits (vertical driver block) Outputs: V<sub>M24</sub> and V<sub>L</sub>
- 3-value output driver circuits (vertical driver block) Outputs: V<sub>H</sub>, V<sub>M13</sub>, and V<sub>L</sub>
- 2-value output driver circuits (SUB driver block) Outputs:  $V_{HH}$  and  $V_{L}$

#### Applications

• Video cameras, surveillance cameras, digital still cameras, CCD camera systems

#### ■ Pin Descriptions

Pin No.	Pin name	I/O	Description
		0	•
1	O <sub>SUB</sub>		SUB pulse output
2	$V_{\rm L}$	I	Low-level power supply
3	$O_{V2}$	О	2-value transfer pulse output
4	V <sub>M13</sub>	I	Mid-level power supply
5	$O_{V1}$	О	3-value transfer pulse output
6	V <sub>DC</sub>	I	Input block high-level power supply
7	$I_{V1}$	I	Transfer pulse input
8	CH1	I	Charge pulse input
9	$I_{V2}$	I	Transfer pulse input
10	$I_{SUB}$	I	SUB pulse input
11	N.C.		Unused
12	$I_{V4}$	I	Transfer pulse input
13	CH2	I	Charge pulse input
14	$I_{V3}$	I	Transfer pulse input
15	N.C.		Unused
16	$V_{H}$	I	High-level power supply of vertical driver block
17	$O_{V3}$	0	3-value transfer pulse output
18	O <sub>V4</sub>	0	2-value transfer pulse output
19	V <sub>M24</sub>	I	Unused  Transfer pulse input  Charge pulse input  Transfer pulse input  Unused  High-level power supply of vertical driver block  3-value transfer pulse output  2-value transfer pulse output  Mid-level power supply
20	V <sub>HH</sub>	I	High-level power supply of SUB driver block

### ■ Electrical Characteristics

### 1. Absolute Maximum Ratings

Parameter	Symbol	Rating	Unit
Supply voltage 1	$V_{HH}$ - $V_{L}$	32	V
Supply voltage 2	V <sub>H</sub> -V <sub>L</sub>	30	V
Supply voltage 3	$V_{M13}$ , $V_{M24}$	V <sub>L</sub> to 6	V
Supply voltage 4	V <sub>DC</sub>	0 to 7	V
Negative supply voltage	$V_{ m L}$	-12 to 0	V
Input voltage	V <sub>I</sub>	$V_{L}$ – 0.3 to $V_{DC}$ + 0.3	V
Input and output clamp diode currents	$I_{IC}$ , $I_{OC}$	±10	mA
Maximum DC load current	I <sub>ODC</sub>	±3	mA
Maximum load capacitance	$C_{L}$	5 500	pF/PIN
Power dissipation	$P_{D}$	180	mW
Operating temperature	T <sub>opr</sub>	-10 to +70	°C
Storage temperature	T <sub>stg</sub>	-50 to +125	°C

Note) The absolute maximum ratings are stress ratings only, and do not guarantee operation. Stress in excess of the maximum rating may destroy the device.

### ■ Electrical Characteristics (continued)

## 2. Operating Conditions at $T_a = -10^{\circ}C$ to $+70^{\circ}C$

Parameter	Symbol	Conditions	Min	Тур	Max	Unit
Supply voltage 1	$V_{HH}$ - $V_{L}$		$V_H - V_L$		30.5	V
Supply voltage 2	$V_H$ - $V_L$		17		28	V
Supply voltage 3	V <sub>M13</sub> , V <sub>M24</sub>		-1	_	4	V
Supply voltage 4	V <sub>HH</sub> -V <sub>M13</sub>		12			V
	$V_{HH}$ - $V_{M24}$					
Supply voltage 5	$V_{DC}$		2.5		3.6	V
Negative supply voltage	$V_{L}$		-10		-4	V
Input frequency	$f_{IN}$				20	kHz

## 3. DC Characteristics at $V_{HH} = 18.0 \text{ V}$ , $V_{H} = 13.0 \text{ V}$ , $V_{M13} = V_{M24} = 1.0 \text{ V}$ , $V_{L} = -7.0 \text{ V}$ , $V_{DC} = 3.00 \text{ V}$ , $T_{a} = -10^{\circ}\text{C}$ to $+70^{\circ}\text{C}$

Parameter	Symbol	Conditions	Min	Тур	Max	⊌nit
Quiescent supply current	$I_{DDST}$	$V_I = GND$ , $V_{DC} = 2.6 \text{ V}$		_	311	mA

#### ■ Usage Notes

- 1. If the SUB driver is not used:
  - 1) Connect V<sub>HH</sub> (pin 20) to V<sub>H</sub> (pin 16).
  - 2) Connect I<sub>SUB</sub> (pin 10) to V<sub>DC</sub> (pin 6).
  - 3) Leave O<sub>SUB</sub> (pin 1) open.
- 2. Mount the bypass capacitors for power supply pins  $V_{HH}$  (pin 20),  $V_{H}$  (pin 16),  $V_{M13}$  (pin 4),  $V_{M24}$  (pin 19),  $V_{L}$  (pin 2), and V<sub>DC</sub> (pin 6) as close as possible to the pin itself.
- 3. If the overcurrents that occur at power on and power off are limited to under 10 ms and under 100 mA, then the MN31121SA is guaranteed for 10,000 power cycle (power on/power off) operations.
- Please visit following LPL about latest index. 4. Guarantee period after packing is opened The guarantee period after opening the moisture-proof packing is three weeks under environmental conditions of 30°C and 70% RH.
- 5. The recommended reflow soldering temperature is 230°C

# Request for your special attention and precautions in using the technical information and semiconductors described in this book

- (1) If any of the products or technical information described in this book is to be exported or provided to non-residents, the laws and regulations of the exporting country, especially, those with regard to security export control, must be observed.
- (2) The technical information described in this book is intended only to show the main characteristics and application circuit examples of the products, and no license is granted under any intellectual property right or other right owned by our company or any other company. Therefore, no responsibility is assumed by our company as to the infringement upon any such right owned by any other company which may arise as a result of the use of technical information described in this book.
- (3) The products described in this book are intended to be used for standard applications or general electronic equipment (such as office equipment, communications equipment, measuring instruments and household appliances).

  Consult our sales staff in advance for information on the following applications:
  - Special applications (such as for airplanes, aerospace, automobiles, traffic control equipment, combustion equipment, life support systems and safety devices) in which exceptional quality and reliability are required, or if the failure or malfunction of the products may directly jeopardize life or harm the human body.
  - · Any applications other than the standard applications intended.
- (4) The products and product specifications described in this book are subject to change without notice for modification and/or improvement. At the final stage of your design, purchasing, or use of the products, therefore, ask for the most up-to-date Product Standards in advance to make sure that the latest specifications satisfy your requirements.
- (5) When designing your equipment, comply with the range of absolute maximum rating and the guaranteed operating conditions (operating power supply voltage and operating environment etc.). Especially, please be careful not to exceed the range of absolute maximum rating on the transient state, such as power-on, power-off and mode-switching. Otherwise, we will not be liable for any defect which may arise later in your equipment.
- Even when the products are used within the guaranteed values, take into the consideration of incidence of break down and failure mode, possible to occur to semiconductor products. Measures on the systems such as redundant design, arresting the spread of fire or preventing glitch are recommended in order to prevent physical injury, fire, social damages, for example, by using the products.
- (6) Comply with the instructions for use in order to prevent breakdown and characteristics change due to external factors (ESD, EOS, thermal stress and mechanical stress) at the time of handling, mounting or at customer's process. When using products for which damp-proof packing is required, satisfy the conditions, such as shelf life and the elapsed time since first opening the packages.
- (7) This book may be not reprinted or reproduced whether wholly or partially, without the prior written permission of Matsushita Electric Industrial Co., Ltd.
