

Low Power, Wide Temperature Range DACs

FEATURES

- 10- and 12-bit models
- Very low power: less than 300 mW
- Wide operating temperature range: -55°C to +125°C
- MIL-STD-883 Rev. C, Level B or commercial processing
- 18 pin hermetic package

DESCRIPTION

This Series is specifically designed and tested for low power operation. The models feature low total power dissipation of less than 300 mW. Each unit incorporates a pretrimmed output amplifier and a low power internal reference.

The DAC347 Series are high performance, general purpose, digital to analog converters utilizing matched CMOS current switches and ultra stable thin-film nichrome resistor networks. All DAC347 Series models provide optimum stability in performance over the full -55°C to + 125°C temperature range.

Unipolar models use complementary binary coding and bipolar models use complementary offset binary coding. Each DAC347 Series converter comes packaged in a hermetically sealed 18-pin package, ideal for applications where maximum performance in minimum space is required.
