TDA5709

## RADIAL ERROR SIGNAL PROCESSOR FOR COMPACT DISC PLAYERS

### GENERAL DESCRIPTION

The TDA5709 is a bipolar integrated circuit which provides control signals for the radial motor. These control signals are generated from radial error signals received from a photo-diode signal processor (TDA5708), and velocity control signals from the control processor.

### Features

- Tracking error processor with automatic asymmetry control
- A.G.C. circuitry with automatic start-up and wobble generator
- Tracking control for fast forward/reverse scan, search, repeat and pause functions
- TTL compatible digital input/output
- Digitalized tracking error signal
- Possibility for car application

### QUICK REFERENCE DATA

|                                     |                 |               |
|-------------------------------------|-----------------|---------------|
| Supply voltage range                | $V_{DD}-V_{BB}$ | 8 to 13 V     |
| Quiescent supply current            | $I_Q$           | typ. 6 mA     |
| Operating ambient temperature range | $T_{amb}$       | -30 to +85 °C |

### PACKAGE OUTLINE

20-lead DIL; plastic (SOT146).

# TDA5709

## DEVELOPMENT DATA

## PIN DESCRIPTION

| Pin No. | Symbol              | Description   |
|---------|---------------------|---|
| 1       | Re2                 | Input for amplified currents from photo diodes D1 and D2                |
| 2       | C <sub>HPF</sub>    | High-pass filter for Re1 and Re2, used for radial offset control        |
| 3       | REdig               | Digital output of sign (Re2 – Re1)                                      |
| 4       | C <sub>offset</sub> | Offset control input for radial offset                                  |
| 5       | C <sub>agc</sub>    | Gain control input for radial error signal                              |
| 6       | V <sub>DD</sub>     | Positive supply voltage   |
| 7       | REout               | Current output of amplified (Re2 – Re1) input currents                  |
| 8       | RElag               | Voltage output of integrated (Re2 – Re1) input currents                 |
| 9       | C <sub>lag</sub>    | Integrator capacitor for (Re1 – Re2) input currents                     |
| 10      | DAC                 | Current output for track jumping (3½ bits)                              |
| 11      | V <sub>BB</sub>     | Negative supply connection (also substrate connection)                  |
| 12      | B0                  | Input control bits for off-, catch-, play-status and DAC output current |
| 13      | B1                  |   |
| 14      | B2                  |   |
| 15      | B3                  |   |
| 16      | R <sub>osc</sub>    | Biassing resistor for oscillator frequency and internal amplitude       |
| 17      | V <sub>ref</sub>    | Intermediate supply voltage   |
| 18      | C <sub>osc2</sub>   | Frequency setting capacitors for oscillator                             |
| 19      | C <sub>osc1</sub>   |   |
| 20      | Re1                 | Input for amplified currents from photo-diodes D3 and D4                |

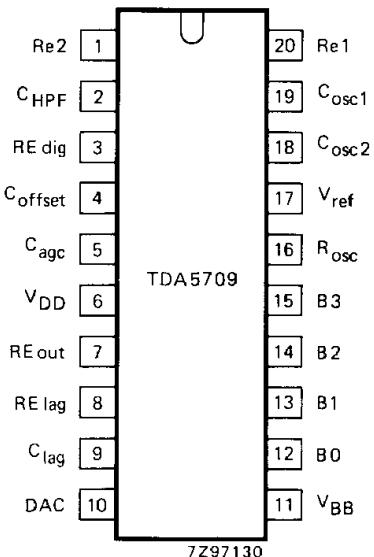

Fig. 2 Pinning diagram.

**RATINGS**

Limiting values in accordance with the Absolute Maximum System (IEC 134)

Supply voltage range ( $V_{DD} - V_{BB}$ )  
pin 6 – pin 11

$V_{DD}-V_{BB}$  –0,3 to +13 V

Total power dissipation

$P_{tot}$  see Fig. 3

Storage temperature range

$T_{stg}$  –55 to +150 °C

Operating ambient temperature range

$T_{amb}$  –30 to +85 °C

Operating junction temperature

$T_j$  max. 150 °C

**THERMAL RESISTANCE**

From junction to ambient

$R_{th\ j-a}$  = 72 K/W

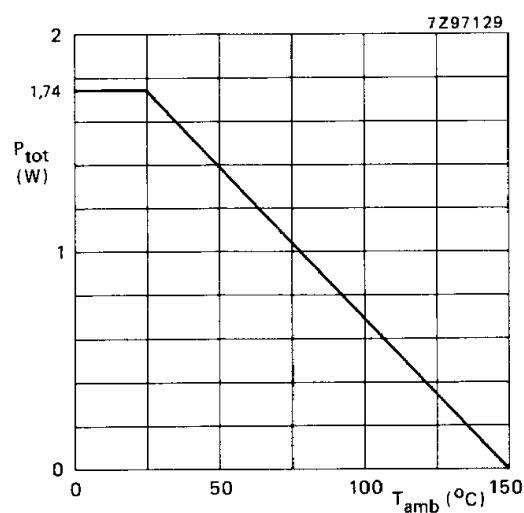

Fig. 3 Power derating curve.

**CHARACTERISTICS**

$V_{DD} = +5\text{ V}$ ;  $V_{BB} = -5\text{ V}$ ;  $T_{amb} = 25^\circ\text{C}$ ;  $V_{ref} = 0\text{ V}$ ;  $R_{osc} = 24\text{ k}\Omega$ ; all voltages with respect to  $V_{ref}$ ; unless otherwise specified.

## Notes to the characteristics

## 1. REdig output conditions:

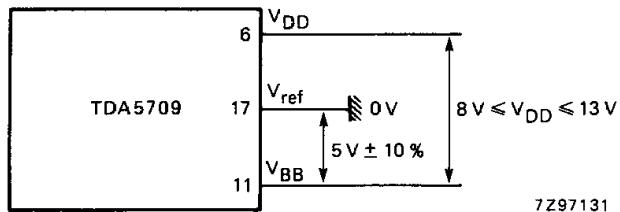

A:  $|I_{RE1}| > |I_{RE2}| + 5 \mu\text{A}$ ;  $V_{COFFSET} = V_{REF}$ ;  $B0$  and  $B1$  and  $B2$  and  $B3 > V_{BB} + 2,0 \text{ V}$ .B:  $|I_{RE1}| > |I_{RE2}| + 5 \mu\text{A}$ ;  $V_{COFFSET} = V_{REF}$ ;  $B0$  or  $B1$  or  $B2$  or  $B3 < V_{BB} + 0,8 \text{ V}$ .C:  $|I_{RE2}| > |I_{RE1}| + 5 \mu\text{A}$ ;  $V_{COFFSET} = V_{REF}$ ; don't cares for  $B0$ ,  $B1$ ,  $B2$  and  $B3$ .2. In the 'home' application all logical inputs  $B0$ ,  $B1$ ,  $B2$  and  $B3$  must be  $> V_{BB} + 2 \text{ V}$ .

Fig. 4 TDA5709 'home' application.

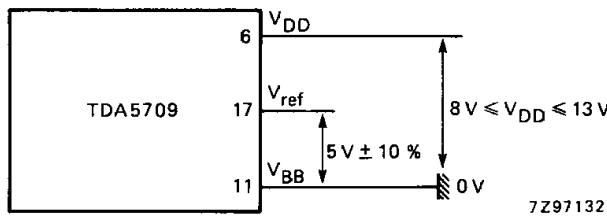

3. In the 'car' application one or more of the logical inputs  $B0$ ,  $B1$ ,  $B2$ ,  $B3$  must be  $< V_{BB} + 0,8 \text{ V}$ .

Fig. 5 TDA5709 'car' application.

4.  $M_2$  is the measured value of  $I_{OSC1}$  at  $V_{OSC1} = 0 \text{ V}$ .5.  $M_3$  is the measured value of  $I_{OSC2}$  at  $V_{OSC2} = 0 \text{ V}$ .

6. Parabolic curve.

7.  $V_{COFFSET}$  must be adjusted so that  $I_{CLAG} = 4 \mu\text{A}$ .

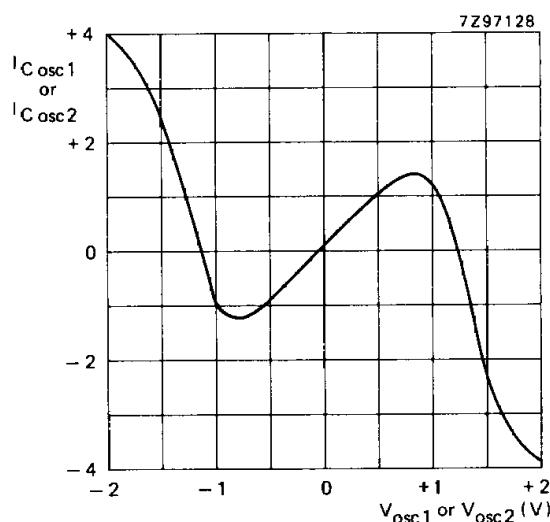

Fig. 6 Amplitude stabilization (typical curve).
