

LM2567 LAN DC/DC Converter

General Description

The LM2567 DC/DC converter is intended for use in LAN applications as a power supply for the DP8392 Coaxial Transceiver. The converter may be operated from an input voltage of 5V ($\pm 10\%$) to 15V. It provides an isolated output of $-9V$ for loads of up to 180 mA, with an efficiency of 78% (typical). The few external components required for the converter are completely specified within this datasheet.

Protection features for the LM2567-based DC/DC converter include thermal and current limit. Undervoltage lockout and soft-start are incorporated to minimize the inrush current during start-up.

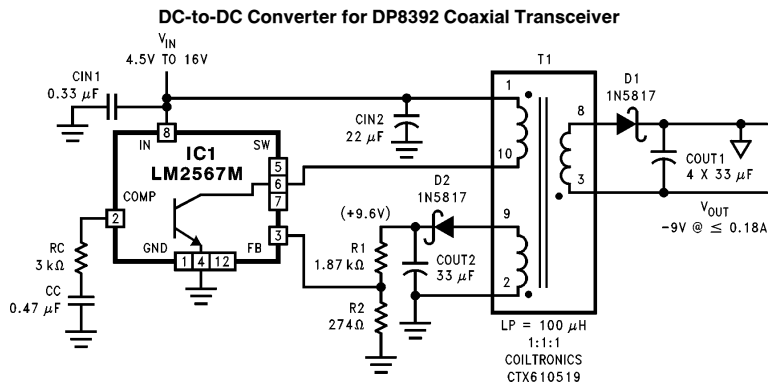

Features

- Wide input voltage range, 5V to 15V
- Tight line regulation, 0.5% (typ)
- Output voltage tolerance $\pm 5\%$
- Few external components required
- Surface-mount packaging
- Fixed switching frequency of 52 kHz
- Current-mode operation for improved transient response

Typical Applications

- Power supply for DP8392 (LAN) coaxial transceiver: Isolated $-9V$ output for up to 180 mA load

Absolute Maximum Ratings (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Supply Voltage	40V
Output Switch Voltage	50V
Output Switch Current	6.0A
Power Dissipation	Internally Limited
Storage Temperature Range	-65°C to +150°C
Lead Temperature (Soldering, 10 sec.)	260°C
Maximum Junction Temperature	150°C
Minimum ESD Rating (C = 100 pF, R = 1.5 kΩ)	2 kV

Operating Ratings

Supply Voltage	$3.5V \leq V_{IN} \leq 35V$
Output Switch Voltage	$0V \leq V_{SW} \leq 45V$
Output Switch Current	$I_{SW} \leq 3.0A$
Junction Temperature Range	$0^\circ C \leq T_J \leq +125^\circ C$
Ambient Temperature Range	$0^\circ C \leq T_A \leq +70^\circ C$

Electrical Characteristics

Specifications with standard type face are for $T_J = 25^\circ C$, and those in **bold typeface** apply over full Operating Temperature Range. Unless otherwise specified, $V_{IN} = 5V$, $V_{FB} = V_{REF}$, and $I_{SWITCH} = 0$. (Note 2)

Note 1: Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating ratings indicate conditions the device is intended to be functional, but device parameter specifications may not be guaranteed under these conditions. For guaranteed specifications and test conditions, see the Electrical Characteristics.

Note 2: All limits guaranteed at room temperature (standard typeface) and at temperature extremes (**boldface type**). All room temperature limits are 100% production tested. All limits at temperature extremes are guaranteed via correlation using standard Statistical Quality Control (SQC) methods.

Note 3: Junction-to-Ambient thermal resistance with approximately 1 square inch of p.c. board copper surrounding the leads. Additional copper area will lower thermal resistance further.

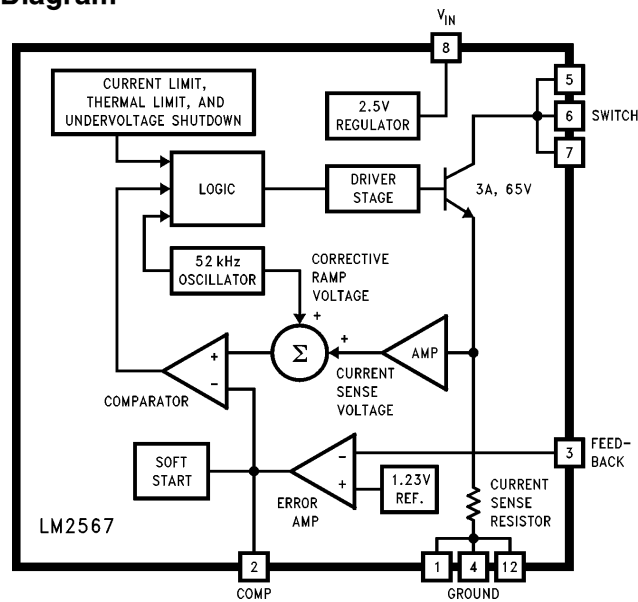

Note 4: A 1.0 M Ω resistor is connected to the compensation pin (which is the error amplifier's output) to ensure accuracy in measuring A_{VOL} . In actual applications, this pin's load resistance should be $\geq 10\text{ M}\Omega$, resulting in A_{VOL} that is typically twice the guaranteed minimum limit.

LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
