

## 3:1 Active HDMI 1.3 Compatible Switch with Optimized Equalization for Enhanced Signal Integrity

### Features

- Supply voltage,  $V_{CC} = 3.3V \pm 5\%$
- Each Port is compatible w/ DVI, HDMI 1.1, HDMI 1.2 or HDMI 1.3 signals
- Supports both AC-coupled and DC-coupled inputs
- High Performance, up to 1.65 Gbps per channel
- Switching support for 3 side band signals (SCL, SDA and HPD)
- 5V Tolerance on all side band signals
- SCL, SDA, and HPD pins are the only pins that can support HOT INSERTION
- Integrated 50-ohm ( $\pm 10\%$ ) termination resistors at each high speed signal input
- Configurable output swing control (500mV, 750mV, 1000mV)
- Configurable Pre-Emphasis levels (0dB, 1.5dB, 3.5dB, & 6.0dB)
- Configurable De-Emphasis (0dB, -3.5dB, -6.0dB, -9.5dB)
- Optimized Equalization  
Single default setting will support all cable lengths
- ESD protection = 8kV (typical) on high-speed data channels only
- Propagation delay  $\leq 2ns$
- High Impedance Outputs when disabled
- Packaging (Pb-free & Green): 80-contact LQFP (FF80)

### Description

Pericom Semiconductor's PI3HDMI341AR 3:1 active switch circuit is targeted for high-resolution video networks that are based on DVI/HDMI standards and TMDS signal processing. The PI3HDMI341AR is an active 3 TMDS to 1 TMDS receiver switch with Hi-Z outputs. The device receives differential signals from selected video components and drives the video display unit. It provides three controllable output swings that can be controlled through a single bit. The allowable output swings are 500mV, 750mV and 1000mV. This solution also provides a unique advanced pre-emphasis technique to increase rise and fall times which are reduced during transmission across long distances.

Each complete HDMI/DVI channel also has slower speed, side band signals, that are required to be switched. Pericom's solution provides a complete solution by integrating the side band switch together with the high speed switch in a single solution. Using Equalization at the input of each of the high speed channels, Pericom can successfully eliminate deterministic jitter caused by long cables from the source to the sink. The elimination of the deterministic jitter allows the user to use much longer cables (up to 25 meters).

The maximum DVI/HDMI Bandwidth of 1.65 Gbps provides 8-bit deep color support, which is offered by HDMI revision 1.3. Due to its active uni-directional feature, this switch is designed for usage only for the video receiver's side. For consumer video networks, the device sits at the receiver's side to switch between multiple video components, such as PC, DVD, STB, D-VHS, etc. The PI3HDMI341AR is the industry's first active DVI/HDMI switch compatible with HDMI 1.1, 1.2, and 1.3 which ensures transmitting high-bandwidth video streams from video components to the display unit. The PI3HDMI341AR also provides enhanced robust ESD/EOS protection of 8kV, which is required by many consumer video networks today.

The Optimized Equalization provides the user a single optimal setting that can provide HDMI compliance for all cable lengths: 2meter, 10meter, 15meter, and 20 meter. Pericom also offers the ability to fine tune the equalization settings in situations where cable length is known. For example, if 25meter length cable is required, Pericom's solution can be adjusted to 16dB EQ to accept 25meter cable length.

**Maximum Ratings**

(Above which useful life may be impaired. For user guidelines, not tested.)

Storage Temperature .....	-65°C to +150°C
Supply Voltage to Ground Potential.....	-0.5V to +4.0V
DC Input Voltage .....	-0.5V to V <sub>CC</sub>
DC Output Current.....	120mA
Power Dissipation .....	1.0W

**Note:**

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

2. t<sub>sk(o)</sub> is the magnitude of the difference in propagation delay times between any specified terminals of channel 2 to 4 of a device when inputs are tied together.

**Application Information**

**Supply Voltage**

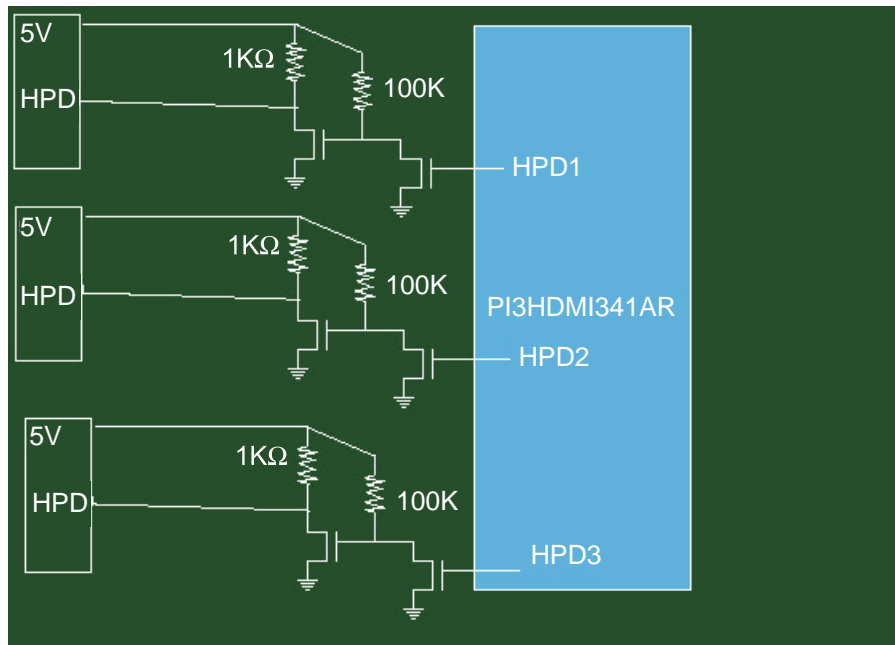

All V<sub>CC</sub> pins are recommended to have a 0.01uF capacitor tied from V<sub>CC</sub> to GND to filter supply noise

**TMDs inputs**

Standard TMDs terminations have already been integrated into Pericom's PI3HDMI341AR device. Therefore, external terminations are not required. Any unused port must be left floating and not tied to GND.

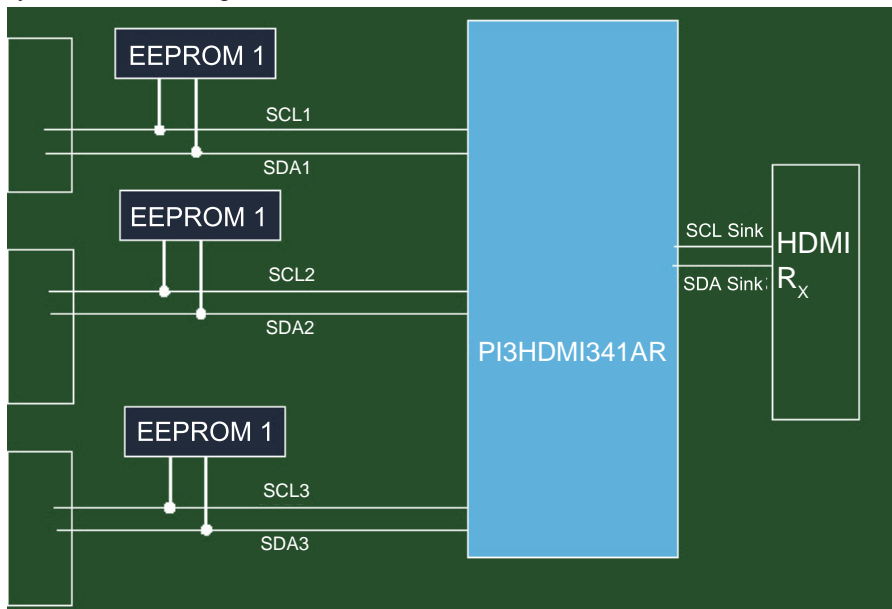

**HPD Pins**

The HPD pins on the PI3HDMI341AR require external pull down transistors to maintain a 0V signal when port is not selected, as follows:

**SCL and SDA pins**

For EDID readability when the Sink is power off, 3 EEPROMs will be needed as follows

This architecture allows EDID readability when the DTV is power off or power on.
