

FSUSB22 Low Power 2 Port Hi-Speed USB 2.0 (480Mbps) Switch

General Description

FSUSB22 is a low power high bandwidth switch specially designed for applications of the switching of high speed USB 2.0 signals in handset and consumer applications such as cell phone, digital camera, and notebook with hubs or controllers of limited USB I/O. The wide bandwidth (750MHz) of this switch allows signals to pass with minimum edge and phase distortion. Superior channel-to-channel crosstalk results in minimal interference. It is compatible with USB2.0 Hi-Speed standard.

Features

- -40dB OFF Isolation at 250MHz
- -40dB non-adjacent channel crosstalk at 250MHz
- 4.5Ω typical On Resistance (R_{ON})
- -3dB bandwidth: 750MHz
- Low power consumption (1uA max)
- Control input: TTL compatible
- Bidirectional operation
- USB Hi-Speed and Full Speed signaling capability

Applications

- Cell phone, PDA, digital camera, and notebook

Note 2: The Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating. The Recommended Operating Conditions tables will define the conditions for actual device operation.

Note 3: The input and output negative voltage ratings may be exceeded if the input and output diode current ratings are observed.

Note 4: Unused control inputs must be held HIGH or LOW. They may not float.
