

To all our customers

Regarding the change of names mentioned in the document, such as Mitsubishi Electric and Mitsubishi XX, to Renesas Technology Corp.

The semiconductor operations of Hitachi and Mitsubishi Electric were transferred to Renesas Technology Corporation on April 1st 2003. These operations include microcomputer, logic, analog and discrete devices, and memory chips other than DRAMs (flash memory, SRAMs etc.) Accordingly, although Mitsubishi Electric, Mitsubishi Electric Corporation, Mitsubishi Semiconductors, and other Mitsubishi brand names are mentioned in the document, these names have in fact all been changed to Renesas Technology Corp. Thank you for your understanding. Except for our corporate trademark, logo and corporate statement, no changes whatsoever have been made to the contents of the document, and these changes do not constitute any alteration to the contents of the document itself.

Note : Mitsubishi Electric will continue the business operations of high frequency & optical devices and power devices.

M35080FP

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

DESCRIPTION

The M35080FP is a bitmap pattern display control IC can display on the screen. Display frequency can operate in 3.3MHz to 20MHz, and is equipped with the analog RGB output (512 colors / 260k colors) and the digital RGB output (512 colors) function. Moreover, 2 pages (horizontal 128 dot X vertical 96 dots/page) display can be simultaneously performed on 1 screen. It uses a silicon gate CMOS process and it housed in a 24-pin shrink SOP package.

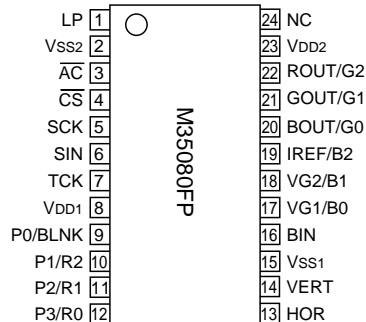

FEATURES

- Pixel composition Eight kinds (Can be chosen from the following)
 - horizontal 128 dots X vertical 96 dots X 2 pages
 - horizontal 192 dots X vertical 64 dots X 2 pages
 - horizontal 256 dots X vertical 48 dots X 2 pages
 - horizontal 384 dots X vertical 32 dots X 2 pages
 - horizontal 32 dots X vertical 384 dots X 2 pages
 - horizontal 48 dots X vertical 256 dots X 2 pages
 - horizontal 64 dots X vertical 192 dots X 2 pages
 - horizontal 96 dots X vertical 128 dots X 2 pages
- RGB output
 - Analog RGB output ROUT, GOUT, BOUT
 - Number of colors displayed
 - double-screen display (3 bits each of RGB) : 512 colors
 - one-screen display (6 bits each of RGB) : 260 K colors
 - Digital RGB output R0 to R2, G0 to G2, B0 to B2,
 - Number of colors displayed
 - one and double-screen display (3 bits each of RGB) : 512 colors
- Bit map RAM 1000h to 3AFFh
 - 128 X 96 X 9 plans (R, G, B every 3 bit) X 2
 - 221184 bit (27 Kbyte)
- Display input frequency range
 - external input Fosc = 3.3 MHz to 20 MHz
- Horizontal synchronous input frequency
 - H.sync = 10 kHz to 20 kHz
- Output ports (Combination port output)
 - 4 ports (Switches with R0, R1, R2 and BLNK output)
- DAC 6 bits X 3 (R, G, B)
- Operating voltage 2.7 V to 3.3 V

APPLICATION

Liquid crystal display, Plasma display, Multi-scan monitor

PIN CONFIGURATION (TOP VIEW)

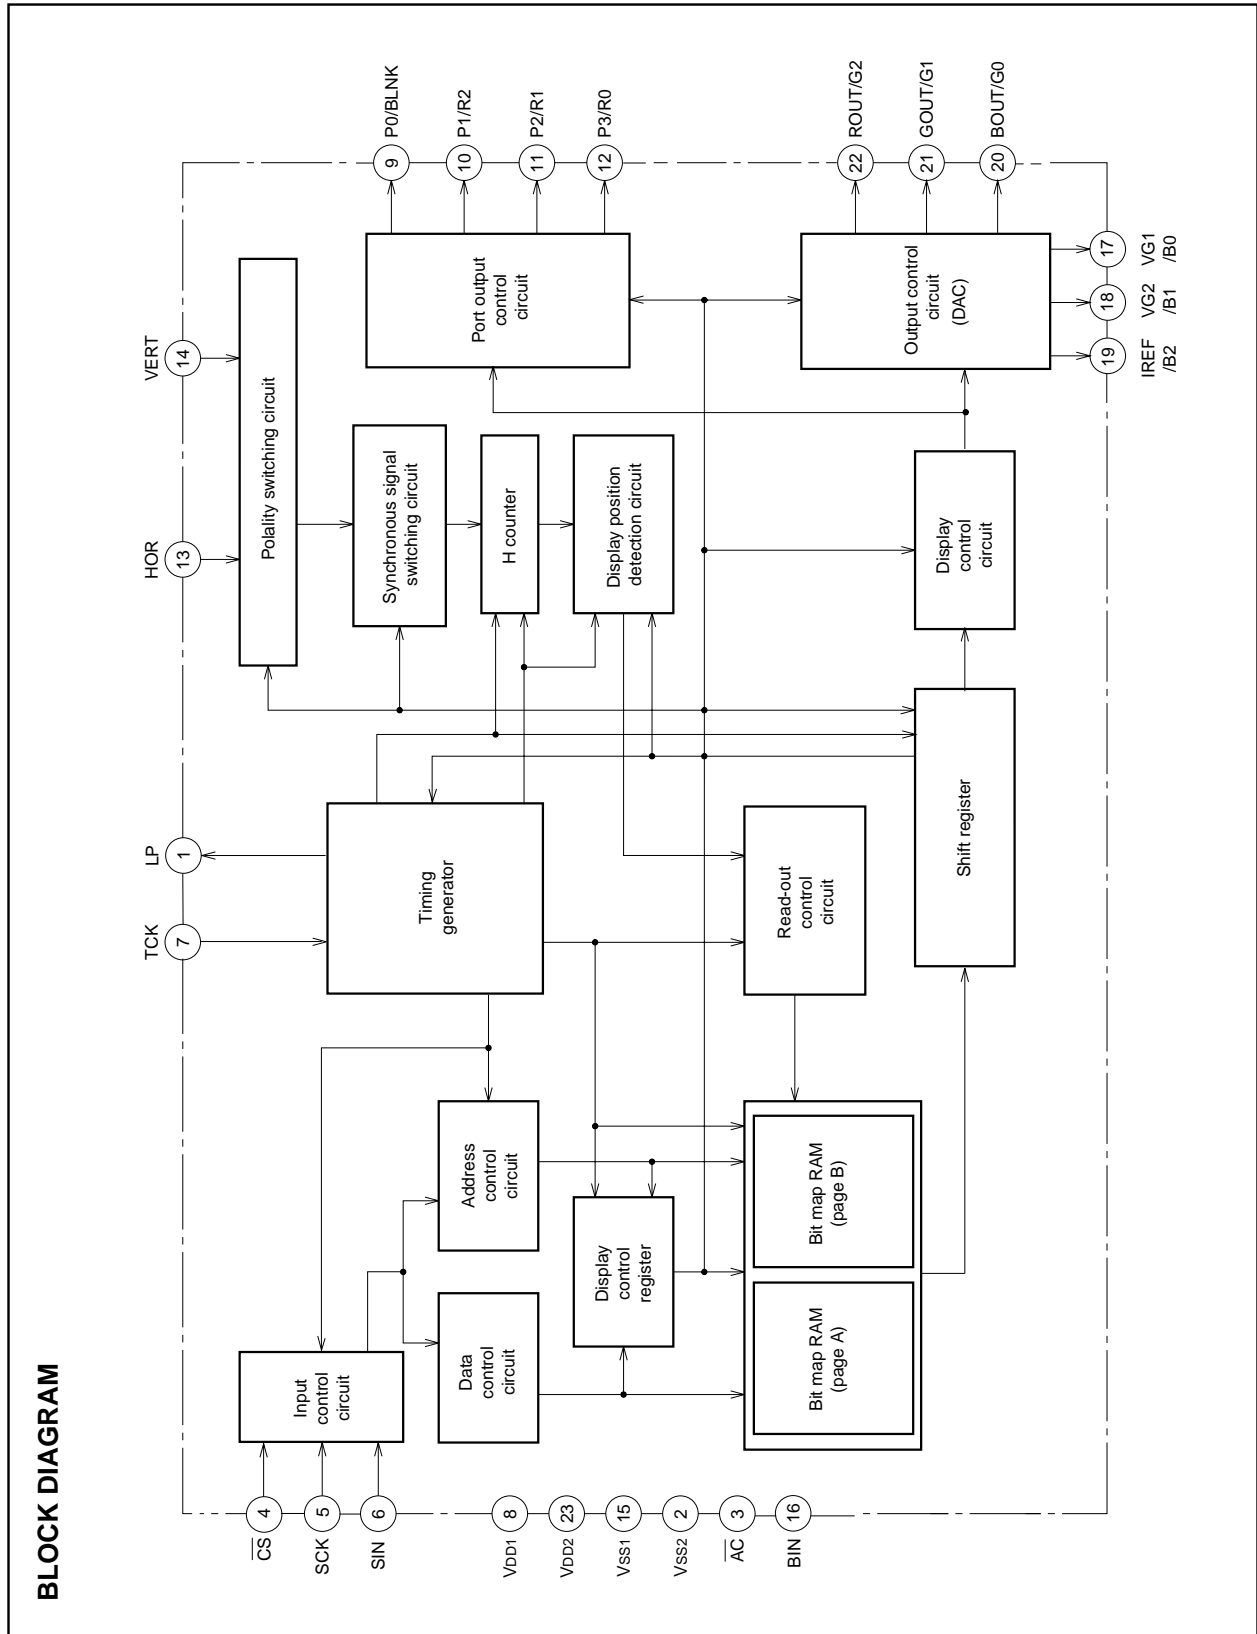

Outline 24P2Q-A

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

PIN DESCRIPTION

Symbol	Pin name	Input/ Output	Function
LP	Test output	Output	Test pin. Open this pin.
Vss2	Earthing pin	–	Connect to GND.
\overline{AC}	Auto-clear input	Input	When "L", this pin resets the internal IC circuit. Hysteresis input. Built-in pull-up resistor.
\overline{CS}	Chip select input	Input	This is the pin for chip select input. Set "L" level at serial data transmission. Hysteresis input.
SCK	Serial clock input	Input	At \overline{CS} pin is "L" level, SDA pin serial data is taken in when SCL rises. Hysteresis input. Built-in pull-up resistor.
SIN	Serial data input	Input	This is the pin for serial input of display control register and display RAM data. Also, this pin output acknowledge signal. Hysteresis input. Nch open-drain output.
TCK	External clock	Input	This is the pin for external clock input.
VDD1	Power pin	–	Digital power supply. Connect to +3V with the power pin.
P0/BLNK	Port P0 output	Output	This is a general purpose port output at analog RGB output. Outputs port output or BLNK signal.
	BLNK		Outputs BLNK signal at digital RGB output.
P1/R2	Port P1 output	Output	This is the output port output at analog RGB output.
	R2		Outputs R2 signal at digital RGB output.
P2/R1	Port P2 output	Output	This is the output port output at analog RGB output.
	R1		Outputs R1 signal at digital RGB output.
P3/R0	Port P3 output	Output	This is the output port output at analog RGB output.
	R0		Outputs R0 signal at digital RGB output.
HOR	Horizontal synchronous signal input	Input	Input horizontal synchronous signal. (Hysteresis input.)
VERT	Vertical synchronous signal input	Input	Input vertical synchronous signal. (Hysteresis input.)
Vss1	Earthing pin	–	Connect to GND.
BIN	Test pin	–	Test pin. Connect to GND.
VG1/B0	Reference voltage output 1	Output	Use reference voltage output 1 of DAC for analog RGB output at analog RGB output. Connect to capacitor.
	B0		Output B0 signal at digital RGB output.
VG2/B1	Reference voltage output 1	Output	Use reference voltage output 2 of DAC for analog RGB output at analog RGB output. Connect to capacitor.
	B1		Output B1 signal at digital RGB output.
IREF/B2	Reference voltage output 2	Output	The pin connects resistors which convert voltage current at analog RGB output.
	B2		Output B2 signal at digital RGB output.
BOUT/G0	Analog B signal output	Output	Output analog B signal at analog RGB output(Current output). Connect to load resistance.
	G0		Output G0 signal at digital RGB output.
GOUT/G1	Analog G signal output	Output	Output analog G signal at analog RGB output(Current output). Connect to load resistance.
	G1		Output G1 signal at digital RGB output.
ROUT/G2	Analog R signal output	Output	Output analog R signal at analog RGB output(Current output). Connect to load resistance.
	G2		Output G2 signal at digital RGB output.
VDD2	Power pin	–	Digital power supply. Connect to +3V with the power pin.
NC	NC	–	NC pin. Open.

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

MEMORY CONSTITUTION

Address 0000₁₆ to 0007₁₆ are assigned to the display RAM, address 1000₁₆ to 3AFF₁₆ are assigned to bitmap RAM. The internal circuit is reset and all display control registers (address 0000₁₆ to 0007₁₆) are set to "0" when the AC pin level is "L". And then, bit map RAM is not erased and be undefined. This memory has 2-page composition (an address is Page A and page B community)

of the memory for page A, and the memory for page B. Registers PAGEONA and PAGEONB perform page control at the time of writing in data. For detail, refer to "DATA INPUT EXAMPLE". Memory constitution is shown in Figure 1 to 10.

Address	DAF	DAE	DAD	DAC	DAB	DAA	DA9	DA8	DA7	DA6	DA5	DA4	DA3	DA2	DA1	DA0
0000 ₁₆	-	-	-	-	-	-	-	-	-	-	-	-	-	-	PAGEONB	PAGEONA
0001 ₁₆	-	-	-	-	-	YM2	YM1	YM0	BLANK1	BLANK0	ALLON	DSPON	-	WIDTH2	WIDTH1	WIDTH0
0002 ₁₆	-	VSIZE1	VSIZE0	-	-	-	VP9	VP8	VP7	VP6	VP5	VP4	VP3	VP2	VP1	VP0
0003 ₁₆	-	-	-	-	-	-	HP9	HP8	HP7	HP6	HP5	HP4	HP3	HP2	HP1	HP0
0004 ₁₆	-	ANADIG2	ANADIG1	ANADIG0	SYNCK	TEST	-	-	-	-	-	POLV	POLH	MODE2	MODE1	MODE0
0005 ₁₆	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-
0006 ₁₆	-	DACON	-	-	-	-	-	-	-	-	-	-	-	-	-	-
0007 ₁₆	-	-	-	-	-	-	-	-	SBLANK3	SBLANK2	SBLANK1	SBLANK0	PTD3	PTD2	PTD1	PTD0

Fig.1 Memory constitution (Display Control register)

Note : Address 0000₁₆ and 0004₁₆ to 0007₁₆ are Page A and B common registers. The writing of data is made regardless of registers PAGEONA and PAGEONB. As for addresses 0001₁₆ to 0003₁₆, register of Page A and Page B exists for every page (common to an address.)
 When write data in the memory for page A, and write data in the memory for page B, set it as register PAGEONA = "1" at register PAGEONB = "1."
 When both of PAGEONA and PAGEONB are set to "1", data can be simultaneously written in both the memory for page A, and the memory for page B.
 Address 0XXX₁₆ other than addresses 0000₁₆ to 0007₁₆ are write-protected.

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

Pixel composition

Each bit of a bit map display consists of nine bit map RAM (R0 to R2, G0 to G2, and B0 to B2.) Color setup can be specified out of 512 kinds per dot. The bit map RAM address corresponding to dot composition in case pixel composition is 128 dot x 96 dot is shown

in Fig. 11. And, the bit map RAM address corresponding to dot composition in case pixel composition is 64 dot x192 dot is shown in Fig. 12. In other pixel composition, the bit map RAM is similarly assigned in an order from the dots 1 to 16 of line 1.

Lines \ Dots	Dots							
	1 to 16	17 to 32	33 to 48	49 to 64	65 to 80	81 to 96	97 to 112	113 to 128

DISPLAY FORM

M35080FP can display two pages, Page A and Page B, simultaneously, as shown in Figure 13.

And, 1 page of 260K color display can be displayed by piling up two pages completely.

(Page A: register PAGEONA (address 0000₁₆) Set up by = "1."
 Page B: register PAGEONB (address 0000₁₆) Set up by = "1.")

Fig. 13 The example of a display at the time of a 2-page display

Notes 1: Setup of display position, display size, etc. can be freely performed for every page. Two pages can be displayed side by side vertically and horizontally.

2: when the display area of two pages overlaps on the monitoring screen, registers MODE0 and MODE1 (address 0004₁₆) can perform four displays as follows.

MODE1	MODE0	Display mode	Display number of pages
0	0	Priority is given to Page A	2 pages
0	1	Priority is given to Page B	2 pages
1	0	260 K colors display(Note 1)	1 page
1	1	The average of Page A and Page B	2 pages

- (1) Priority is given to Page A The overlaped part gives priority to Page A, and Page B is not displayed.
- (2) Priority is given to Page B The overlaped part gives priority to Page B, and Page A is not displayed.
- (3) 260 K colors display By overlaping two pages completely, 1 page of 260K color is displayed.
 RGB output is 6-bit(Note 2)each setup.
- (4) The average of Page A and Page B ... The overlaped part averages and outputs the RGB output of two pages.

Notes 1. It becomes 512 color displays at the time of digital RGB output setup.

2. Assignment of 6 bits each of RGB is as follows.

SCREEN CHARACTER and PATTERN DISPLAY CONTROLLERS

DATA INPUT EXAMPLE

Data of Bit map RAM and display control registers can be set by the 16-bit serial input function. Example of data setting is shown in Figure 14.

R_I	Pull-up resistance AC		$V_{DD} = 3.00V$	10	-	100	k Ω
V_{TCK}	External clock input width			$0.7 \times V_{DD}$	-	V_{DD}	V
V_{DAO}	Full scale width	ROUT, GOUT, BOUT	$R_{REF} = 1.2k\Omega$, $R_L = 300\Omega$	-	1.0	-	Vp-p
NL	Nonlinear nature error	ROUT, GOUT, BOUT	$R_{REF} = 1.2k\Omega$, $R_L = 300\Omega$	-	-	± 2.0	LSB

NOTE FOR SUPPLYING POWER**(1) Timing of power supplying to AC pin**

The internal circuit of M35080FP is reset when the level of the auto clear input pin \overline{AC} is "L". This pin is hysteresis input with the pull-up resistor.

The timing about power supplying of \overline{AC} pin is shown in Figure below.

After supplying the power (V_{DD} and V_{SS}) to M35080FP and the supply voltage becomes more than $0.8 \times V_{DD}$, it needs to keep V_{IL} time; t_w of the \overline{AC} pin for more than 1ms.

Start inputting from microcomputer after \overline{AC} pin supply voltage becomes more than $0.8 \times V_{DD}$ and keeping 200ms wait time.

(2) Timing of power supplying to V_{DD1} and V_{DD2} .

Supply power to V_{DD1} and V_{DD2} at the same time.

Fig.19 Timing of power supplying to \overline{AC} pin

PRECAUTION FOR USE**Notes on noise and latch-up**

In order to avoid noise and latch-up, connect a bypass capacitor ($\approx 0.1\mu\text{F}$) directly between the V_{DD1} pin and V_{SS1} pin, and the V_{DD2} pin and V_{SS2} pin using a heavy wire.

Notes on the time of external clock input to TCK pin

Input the continuous external clock which cycle is fixed and synchronized with horizontal synchronized signal from TCK pin. And, input continuous horizontal synchronized signal which cycle is fixed from HOR pin. Do not stop clock input absolutely during display.

PACKAGE OUTLINE

24P2Q-A (MMP)

Plastic 24pin 300mil SSOP

EIAJ Package Code	JEDEC Code	Weight(g)	Lead Material
SSOP24-P-300-0.80	-	0.2	Cu Alloy

Renesas Technology Corp.

Nippon Bldg.,6-2,Otemachi 2-chome,Chiyoda-ku,Tokyo,100-0004 Japan

Keep safety first in your circuit designs!

- Mitsubishi Electric Corporation puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of non-flammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

- These materials are intended as a reference to assist our customers in the selection of the Mitsubishi semiconductor product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Mitsubishi Electric Corporation or a third party.
- Mitsubishi Electric Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
- All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Mitsubishi Electric Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for the latest product information before purchasing a product listed herein.
- The information described here may contain technical inaccuracies or typographical errors. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors. Please also pay attention to information published by Mitsubishi Electric Corporation by various means, including the Mitsubishi Semiconductor home page (<http://www.mitsubishichips.com>).
- When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Mitsubishi Electric Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
- Mitsubishi Electric Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or overseas repeater use.
- The prior written approval of Mitsubishi Electric Corporation is necessary to reprint or reproduce in whole or in part these materials.
- If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
- Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
- Please contact Mitsubishi Electric Corporation or an authorized Mitsubishi Semiconductor product distributor for further details on these materials or the products contained therein.
