

## 74ABT543A

Octal latched transceiver with dual enable (3-State)

Product specification
Supersedes data of 1995 Apr 19
IC23 Data Handbook

## 74ABT543A

## FEATURES

- Combines 74ABT245 and 74ABT373 type functions in one device
- 8-bit octal transceiver with D-type latch
- Back-to-back registers for storage
- Separate controls for data flow in each direction
- Output capability: $+64 \mathrm{~mA} /-32 \mathrm{~mA}$
- Live insertion/extraction permitted
- Power-up 3-State
- Power-up reset
- Latch-up protection exceeds 500 mA per Jedec Std 17
- ESD protection exceeds 2000 V per MIL STD 883 Method 3015 and 200 V per Machine Model

## DESCRIPTION

The 74ABT543A high-performance BiCMOS device combines low static and dynamic power dissipation with high speed and high output drive.

The 74ABT543A Octal Registered Transceiver contains two sets of D-type latches for temporary storage of data flowing in either direction. Separate Latch Enable (LEAB, $\overline{L E B A}$ ) and Output Enable (OEAB, OEBA) inputs are provided for each register to permit independent control of data transfer in either direction. The outputs are guaranteed to sink 64 mA .

## FUNCTIONAL DESCRIPTION

The 74ABT543A contains two sets of eight D-type latches, with separate control pins for each set. Using data flow from $A$ to $B$ as an example, when the A-to-B Enable (EAB) input and the A-to-B Latch Enable (LEAB) input are Low the A-to-B path is transparent. A subsequent Low-to-High transition of the LEAB signal puts the $A$ data into the latches where it is stored and the $B$ outputs no longer change with the $A$ inputs. With EAB and OEAB both Low, the 3 -State $B$ output buffers are active and display the data present at the outputs of the $A$ latches.

Control of data flow from $B$ to $A$ is similar, but using the EBA, LEBA, and OEBA inputs.

## QUICK REFERENCE DATA

| SYMBOL | PARAMETER | $\begin{gathered} \text { CONDITIONS } \\ T_{\mathrm{amb}}=25^{\circ} \mathrm{C} ; \text { GND }=0 \mathrm{~V} \end{gathered}$ | TYPICAL | UNIT |

H = High voltage level
$h=$ High voltage level one set-up time prior to the Low-to-High transition of LEXX or EXX (XX $=A B$ or BA)
$\mathrm{L}=$ Low voltage level
। = Low voltage level one set-up time prior to the Low-to-High transition of LEXX or EXX (XX = AB or BA)
$X=$ Don't care
$\uparrow=$ Low-to-High transition of LEXX or EXX (XX = AB or BA)
NC= No change
$\mathrm{Z}=$ High impedance or "off" state

## ABSOLUTE MAXIMUM RATINGS ${ }^{1,2}$

| SYMBOL | PARAMETER | CONDITIONS | RATING | UNIT |
| :---: | :--- | :---: | :---: | :---: |
| $\mathrm{V}_{\text {CC }}$ | DC supply voltage |  | -0.5 to +7.0 |  |
| $\mathrm{I}_{\text {IK }}$ | DC input diode current | $\mathrm{V}_{\mathrm{I}}<0$ | -18 |  |
| $\mathrm{~V}_{\text {I }}$ | DC input voltage ${ }^{3}$ |  | V |  |
| $\mathrm{I}_{\text {OK }}$ | DC output diode current | $\mathrm{V}_{\mathrm{O}}<0$ | -1.2 to +7.0 |  |
| $\mathrm{~V}_{\text {OUT }}$ | DC output voltage ${ }^{3}$ | output in Off or High state | -50 | V |
| $\mathrm{I}_{\text {OUT }}$ | DC output current | output in Low state | -0.5 to +5.5 |  |
| $\mathrm{~T}_{\text {Stg }}$ | Storage temperature range |  | 128 | mA |

NOTES:

1. Stresses beyond those listed may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
2. The performance capability of a high-performance integrated circuit in conjunction with its thermal environment can create junction temperatures which are detrimental to reliability. The maximum junction temperature of this integrated circuit should not exceed $150^{\circ} \mathrm{C}$.
3. The input and output voltage ratings may be exceeded if the input and output current ratings are observed.

## RECOMMENDED OPERATING CONDITIONS

| SYMBOL | PARAMETER | LIMITS |  | UNIT |
| :---: | :--- | :---: | :---: | :---: |
|  |  | Min | Max |  |

| $\Delta_{\text {cc }}$ | Additional supply current per input pin ${ }^{2}$ |  | $\mathrm{V}_{\mathrm{CC}}=5.5 \mathrm{~V}$; one input at 3.4 V , other inputs at $\mathrm{V}_{\mathrm{CC}}$ or GND ; $\mathrm{V}_{\mathrm{CC}}=5.5 \mathrm{~V}$ |  | 0.3 | 1.5 |  | 1.5 | mA |

## NOTES:

1. Not more than one output should be tested at a time, and the duration of the test should not exceed one second.
2. This is the increase in supply current for each input at 3.4 V .
3. For valid test results, data must not be loaded into the flip-flops (or latches) after applying the power.
4. This parameter is valid for any $\mathrm{V}_{C C}$ between 0 V and 2.1 V , with a transition time of up to 10 msec . From $\mathrm{V}_{C C}=2.1 \mathrm{~V}$ to $\mathrm{V}_{C C}=5 \mathrm{~V} \pm 10 \%$, a transition time of up to $100 \mu \mathrm{sec}$ is permitted.

Data sheet status

| Data sheet <br> status | Product <br> status | Definition [1] |
| :--- | :--- | :--- |
| Objective <br> specification | Development | This data sheet contains the design target or goal specifications for product development. <br> Specification may change in any manner without notice. |
| Preliminary <br> specification | Qualification | This data sheet contains preliminary data, and supplementary data will be published at a later date. <br> Philips Semiconductors reserves the right to make chages at any time without notice in order to <br> improve design and supply the best possible product. |
| Product <br> specification | Production | This data sheet contains final specifications. Philips Semiconductors reserves the right to make <br> changes at any time without notice in order to improve design and supply the best possible product. |

[1] Please consult the most recently issued datasheet before initiating or completing a design.

## Definitions

Short-form specification - The data in a short-form specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.
Limiting values definition - Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.
Application information - Applications that are described herein for any of these products are for illustrative purposes only. Philips Semiconductors make no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

## Disclaimers

Life support - These products are not designed for use in life support appliances, devices or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips Semiconductors customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips Semiconductors for any damages resulting from such application.

Right to make changes - Philips Semiconductors reserves the right to make changes, without notice, in the products, including circuits, standard cells, and/or software, described or contained herein in order to improve design and/or performance. Philips Semiconductors assumes no responsibility or liability for the use of any of these products, conveys no license or title under any patent, copyright, or mask work right to these products, and makes no representations or warranties that these products are free from patent, copyright, or mask work right infringement, unless otherwise specified.
