

## DM74AS533 Octal D-Type Transparent Latch with TRI-STATE® Outputs

### General Description

These 8-bit registers feature totem-pole TRI-STATE outputs designed specifically for driving highly-capacitive or relatively low-impedance loads. The high-impedance state and increased high-logic-level drive provide these registers with the capability of being connected directly to and driving the bus lines in a bus-organized system without need for interface or pull-up components. They are particularly attractive for implementing buffer registers, I/O ports, bidirectional bus drivers, and working registers.

The eight inverting latches of the AS533 are transparent D-type latches, meaning that while the enable (G) is high the  $\bar{Q}$  outputs will follow the complement of the data (D) inputs. When the enable is taken low the output will be latched at the complement of the level of the data that was set up.

A buffered output control input can be used to place the eight outputs in either a normal logic state (high or low logic

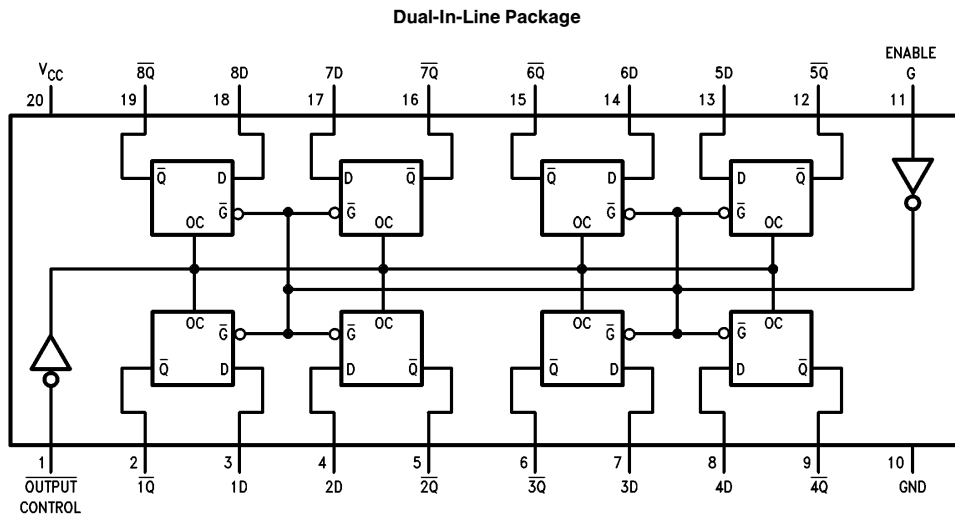

levels) or a high-impedance state. In the high-impedance state the outputs neither load nor drive the bus lines significantly.

The output control does not affect the internal operation of the latches. That is, the old data can be retained or new data can be entered even while the outputs are off.

### Features

- Switching specifications at 50 pF
- Switching specifications guaranteed over full temperature and  $V_{CC}$  range
- Advanced oxide-isolated, ion-implanted Schottky TTL process
- TRI-STATE buffer-type outputs drive bus lines directly

### Connection Diagram

Order Number DM74AS533WM or DM74AS533N

## Absolute Maximum Ratings

|                                      |                 |
|--------------------------------------|-----------------|
| Supply Voltage                       | 7V              |
| Input Voltage                        | 7V              |
| Voltage Applied to Disabled Output   | 5.5V            |
| Operating Free Air Temperature Range | 0°C to +70°C    |
| Storage Temperature Range            | -65°C to +150°C |
| Typical $\theta_{JA}$                |                 |
| N Package                            | 52.5°C/W        |
| M Package                            | 70.5°C/W        |

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

## Recommended Operating Conditions

| Symbol   | Parameter                          | Min          | Nom | Max | Units |
|----------|------------------------------------|--------------|-----|-----|-------|
| $V_{CC}$ | Supply Voltage                     | 4.5          | 5   | 5.5 | V     |
| $V_{IH}$ | High Level Input Voltage           | 2            |     |     | V     |
| $V_{IL}$ | Low Level Input Voltage            |              |     | 0.8 | V     |
| $I_{OH}$ | High Level Output Current          |              |     | -15 | mA    |
| $I_{OL}$ | Low Level Output Current           |              |     | 48  | mA    |
| $t_W$    | Width of Enable Pulse, High or Low | 2            |     |     | ns    |
| $t_{SU}$ | Data Setup Time                    | 2 $\uparrow$ |     |     | ns    |
| $t_H$    | Data Hold Time                     | 3 $\uparrow$ |     |     | ns    |
| $T_A$    | Free Air Operating Temperature     | 0            |     | 70  | °C    |

The ( $\uparrow$ ) arrow indicates the positive edge of the Clock is used for reference.

## Electrical Characteristics

over recommended operating free air temperature range. All typical values are measured at  $V_{CC} = 5V$ ,  $T_A = 25^\circ C$ .

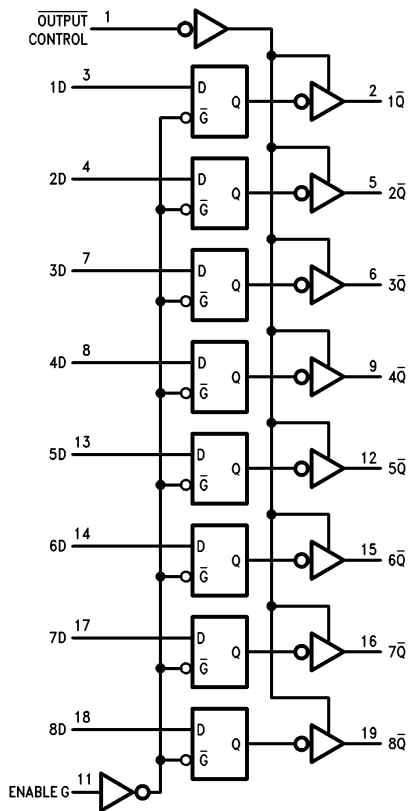

| Symbol    | Parameter  | Conditions                                   | Min              | Typ  | Max  | Units   |
|-----------|--|--|------------------|------|------|---------|
| $V_{IK}$  | Input Clamp Voltage                                  | $V_{CC} = 4.5V$ , $I_I = -18 mA$             |                  |      | -1.2 | V       |

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
