OVERVIEW

ISSI's 64Mb Synchronous DRAM IS42S32200C1 is organized as 524,288 bits x 32-bit x 4-bank for improved performance. The synchronous DRAMs achieve high-speed data transfer using pipeline architecture. All inputs and outputs signals refer to the rising edge of the clock input. Note: This is a summary datasheet specific to the die format. Please refer to the IS42S32200C1 for complete device specification.
