

Features

- 3.3V and 5V output versions
- Guaranteed 3A output load current
- Requires small number of external components
- Excellent line and load regulation
- 150kHz fixed frequency internal oscillator
- Built-in TTL On/Off Control
- Low power standby mode, I_Q typically 80uA
- Built-in current limit protection
- Built-in thermal shutdown circuit.
- Operating voltage: 4.5V~25V
- TO-265 package

Description

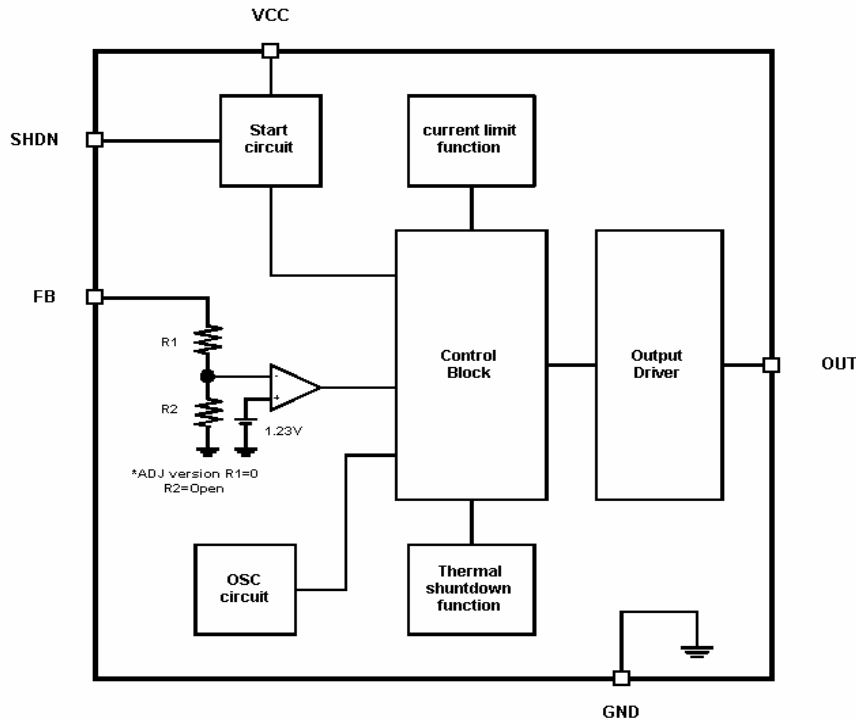

The AT1796 series of regulators are step-down (buck) DC/DC converter, capable of driving a 3A load with excellent line and load regulation. Requiring a minimum number of external components, these regulators are simple to use .

The AT1796 series operates at a switching frequency of 150kHz. Available in a standard 5-lead TO-263 surface mount package. It include a guaranteed $\pm 4\%$ tolerance on output voltage under specified input voltage and output load conditions, and $\pm 15\%$ on the oscillator frequency.

Applications

High-efficiency step-down regulator
 TFT Scalar Board
 On-card switching regulators

Thermal Resistance from Junction to Case	θ _{JC}	7.7	°C/W
Lead Temperature(Soldering, 5sec.)		260	°C
ESD Susceptibility *2	HBM	2	KV
	MM	200	V

1. Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
2. Device are ESD sensitive. Handling precaution recommended. The Human Body model is a 100pF capacitor discharged through a 1.5KΩ resistor into each pin.
3. θ_{JA} is measured with the component mounted on an evaluation PC board in free air that the required area of copper is 2.5in² (1 oz.) or larger.

Recommended operating conditions (T_A = 25°C)

Parameter	Symbol	Limits	unit
Power supply voltage	VCC	4.5~28	V
SHDN pin input voltage	V _{SHDN}	0~+20	V

Typical Performance Characteristics:

Continuous mode switching waveforms

 $V_{IN}=20V$, $V_{OUT}=5V$, $I_{LOAD}=2A$, $L=33\mu H$
 $C_{OUT}=220\mu F$, $C_{OUT ESR}=50m\Omega$

Discontinuous mode switching waveforms

 $V_{IN}=20V$, $V_{OUT}=5V$, $I_{LOAD}=90mA$, $L=33\mu H$
 $C_{OUT}=220\mu F$, $C_{OUT ESR}=50m\Omega$

Load transient response for continuous mode

 $V_{IN}=20V$, $V_{OUT}=5V$, $I_{LOAD}=500mA$ to $2A$
 $L=33\mu H$, $C_{OUT}=220\mu F$, $C_{OUT ESR}=50m\Omega$

Adjustable Output Application Example :

$$V_{OUT} = V_{FB} \left(1 + \frac{R2}{R1} \right)$$

$$V_{FB} = 1.23V$$

Application Circuit:

Delay Startup for Buck Regulator

Undervoltage Lockout for Buck Regulator

Inverting -5V Regulator with Undervoltage Lockout

Inverting -5V Regulator with Delay Startup
