### 350 mA PWM/PFM Step-Up DC-DC Converter with Low Battery Detector

The NCP1404 series are monolithic PWM/PFM step-up DC to DC converters which can automatically change operation mode from PWM to PFM at light loads to improve efficiency at light loads. With only four external components, this series allow a simple means to implement highly efficient converters for powering up portable equipment up to 350 mA loading.

Additionally, this series is featured with a Low Battery Detector to monitor battery voltage. The NCP1404 device series are available in space-saving TSOP-6 package with five standard regulated output voltages. Additional voltages that range from 1.8 V to 5.0 V in 100 mV steps can be manufactured.
