## “OMNIFET II”: FULLY AUTOPROTECTED POWER MOSFET

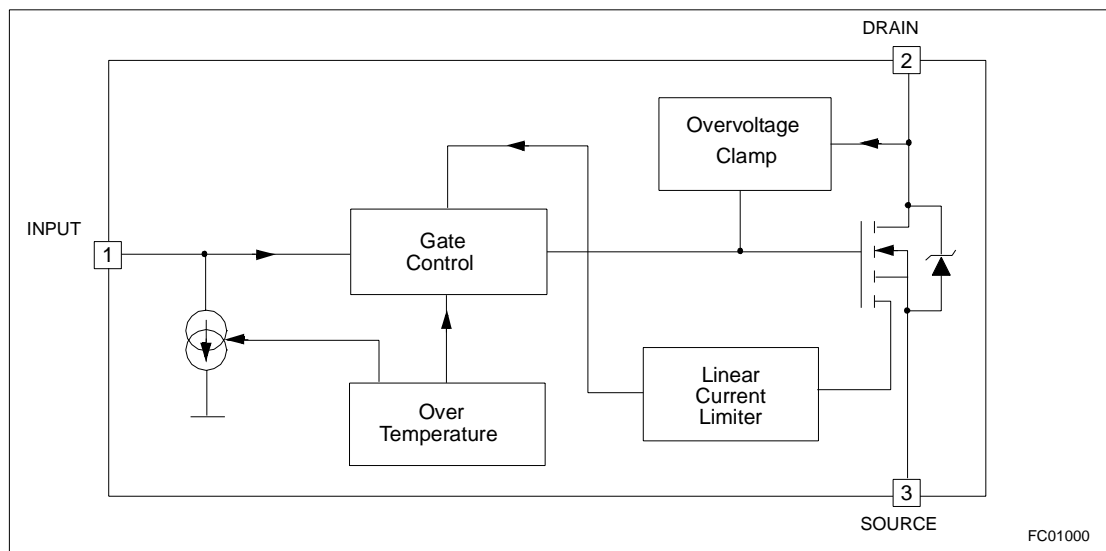

| TYPE       | $R_{DS(on)}$ | $I_{lim}$ | $V_{clamp}$ |
|------------|--------------|-----------|-------------|
| VNN3NV04   | 120 mΩ       | 3.5 A     | 40 V        |
| VNS3NV04   |              |           |             |
| VND3NV04   |              |           |             |
| VND3NV04-1 |              |           |             |

- LINEAR CURRENT LIMITATION
- THERMAL SHUT DOWN
- SHORT CIRCUIT PROTECTION
- INTEGRATED CLAMP
- LOW CURRENT DRAWN FROM INPUT PIN
- DIAGNOSTIC FEEDBACK THROUGH INPUT PIN
- ESD PROTECTION
- DIRECT ACCESS TO THE GATE OF THE POWER MOSFET (ANALOG DRIVING)
- COMPATIBLE WITH STANDARD POWER MOSFET

### DESCRIPTION

The VNN3NV04, VNS3NV04, VND3NV04 VND3NV04-1, are monolithic devices designed in STMicroelectronics VIPower M0-3 Technology,

### BLOCK DIAGRAM

intended for replacement of standard Power MOSFETS from DC up to 50KHz applications. Built in thermal shutdown, linear current limitation and overvoltage clamp protect the chip in harsh environments.

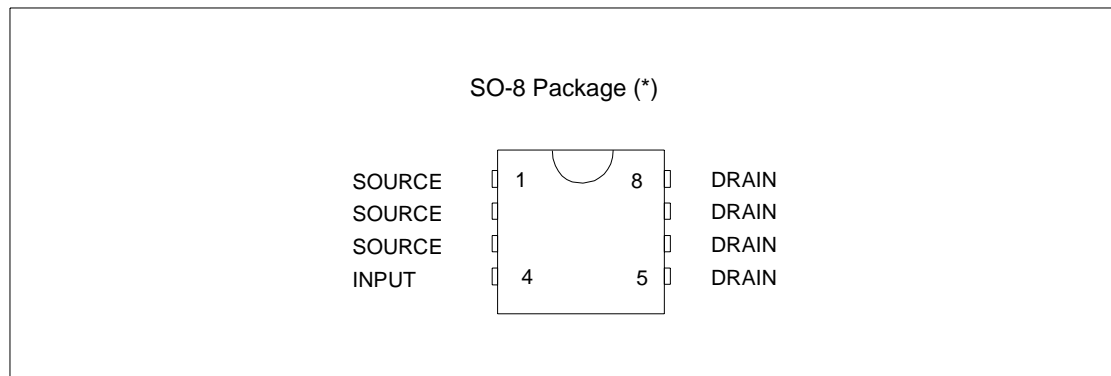

Fault feedback can be detected by monitoring the voltage at the input pin.

(\*) Pulsed: Pulse duration = 300 $\mu\text{s}$ , duty cycle 1.5%

**PROTECTION FEATURES**

During normal operation, the INPUT pin is electrically connected to the gate of the internal power MOSFET through a low impedance path.

The device then behaves like a standard power MOSFET and can be used as a switch from DC up to 50KHz. The only difference from the user's standpoint is that a small DC current  $I_{SS}$  (typ. 100 $\mu$ A) flows into the INPUT pin in order to supply the internal circuitry.

The device integrates:

- OVERVOLTAGE CLAMP PROTECTION:

internally set at 45V, along with the rugged avalanche characteristics of the Power MOSFET stage give this device unrivalled ruggedness and energy handling capability. This feature is mainly important when driving inductive loads.

- LINEAR CURRENT LIMITER CIRCUIT:

limits the drain current  $I_D$  to  $I_{lim}$  whatever the INPUT pin voltages. When the current limiter is active, the device operates in the linear region, so power dissipation may exceed the capability of the heatsink. Both case and junction temperatures increase, and if this phase lasts long enough, junction temperature may reach the overtemperature threshold  $T_{jsh}$ .

- OVERTEMPERATURE AND SHORT CIRCUIT PROTECTION:

these are based on sensing the chip temperature and are not dependent on the input voltage. The location of the sensing element on the chip in the power stage area ensures fast, accurate detection of the junction temperature. Overtemperature cutout occurs in the range 150 to 190 °C, a typical value being 170 °C. The device is automatically restarted when the chip temperature falls of about 15°C below shut-down temperature.

- STATUS FEEDBACK:

in the case of an overtemperature fault condition ( $T_j > T_{jsh}$ ), the device tries to sink a diagnostic current  $I_{gf}$  through the INPUT pin in order to indicate fault condition. If driven from a low impedance source, this current may be used in order to warn the control circuit of a device shutdown. If the drive impedance is high enough so that the INPUT pin driver is not able to supply the current  $I_{gf}$ , the INPUT pin will fall to 0V. **This will not however affect the device operation: no requirement is put on the current capability of the INPUT pin driver except to be able to supply the normal operation drive current  $I_{SS}$ .**

Additional features of this device are ESD protection according to the Human Body model and the ability to be driven from a TTL Logic circuit.

| Compartment Depth | K (max)            | 4.5 |
| Hole Spacing      | P1 ( $\pm 0.1$ )   | 2   |

All dimensions are in mm.

**DPAK FOOTPRINT**

**TUBE SHIPMENT (no suffix)**

**TAPE AND REEL SHIPMENT (suffix "13TR")**

Diagram showing the reel dimensions and tape layout. The reel dimensions table is as follows:

|                 |      |
|-----------------|------|
| Base Q.ty       | 2500 |
| Bulk Q.ty       | 2500 |
| A (max)         | 330  |
| B (min)         | 1.5  |
| C ( $\pm 0.2$ ) | 13   |
| F               | 20.2 |
| G (+ 2 / -0)    | 16.4 |
| N (min)         | 60   |
| T (max)         | 22.4 |

Diagram showing the tape dimensions and layout. The tape width is 16 mm. The hole spacing is  $P0 (\pm 0.1)$  mm. The component spacing is  $P$  mm. The hole diameter is  $D (\pm 0.1/-0)$  mm. The hole diameter is  $D1$  (min) mm. The hole position is  $F (\pm 0.05)$  mm. The compartment depth is  $K$  (max) mm. The hole spacing is  $P1 (\pm 0.1)$  mm. The tape slot in core for tape start is 2.5mm min. width. The access hole at slot location is 40mm min. The full radius is indicated. The user direction of feed is shown.

Diagram showing the tape layout with components and empty components pockets. The tape is 500mm min. long. The empty components pockets are 500mm min. long. The user direction of feed is shown.

**TAPE DIMENSIONS**

According to Electronic Industries Association (EIA) Standard 481 rev. A, Feb 1986

|                   |                  |     |
|-------------------|------------------|-----|
| Tape width        | W                | 16  |
| Tape Hole Spacing | $P0 (\pm 0.1)$   | 4   |
| Component Spacing | P                | 8   |
| Hole Diameter     | $D (\pm 0.1/-0)$ | 1.5 |
| Hole Diameter     | $D1$ (min)       | 1.5 |
| Hole Position     | $F (\pm 0.05)$   | 7.5 |
| Compartment Depth | $K$ (max)        | 6.5 |
| Hole Spacing      | $P1 (\pm 0.1)$   | 2   |

All dimensions are in mm.

**IPAK TUBE SHIPMENT (no suffix)**

|   |      |
