

## Hall-Effect Smart Fan Driver

### ■ Features

- On chip Hall plate
- Built-in Zener diode protection for output driver
- Built-in protection diode for power reverse connecting
- Rotor-lock detection
- Automatically restart after release of motor locking
- Adjustable auto restart time
- Operating voltage: 3.5~20 V
- Max Output current:  $I_{O(AVE)} = 500\text{mA}$
- Packages: SIP-5L, SOP-8L, SOP-8L EP
- Less external component

### ■ Pin Assignments

### ■ General Description

AH280 is the integrated Hall sensor owned two complementary outputs for motor's coil driving, auto locked shutdown and auto restart functions. Functional block diagram includes that a regulator with temperature-compensated band-gap, an on-chip Hall voltage generator, a comparator, a Schmitt trigger and two current output drivers. The regulator can provide wide operational voltage range. The Hall voltage generator is to amplify the Hall voltage due to Hall effect. A Schmitt trigger is to provide switching Hysteresis for noise rejection. To avoid coil burning, rotor-lock detection circuit will shutdown the output driver if detect rotor-lock status. A rotation recovery circuit is to restart the motor after rotor-lock is removed. In addition, the auto re-start time is flexible by adjusting the capacitance ( $C_T$ ).

### ■ Pin Descriptions

#### SIP-5L

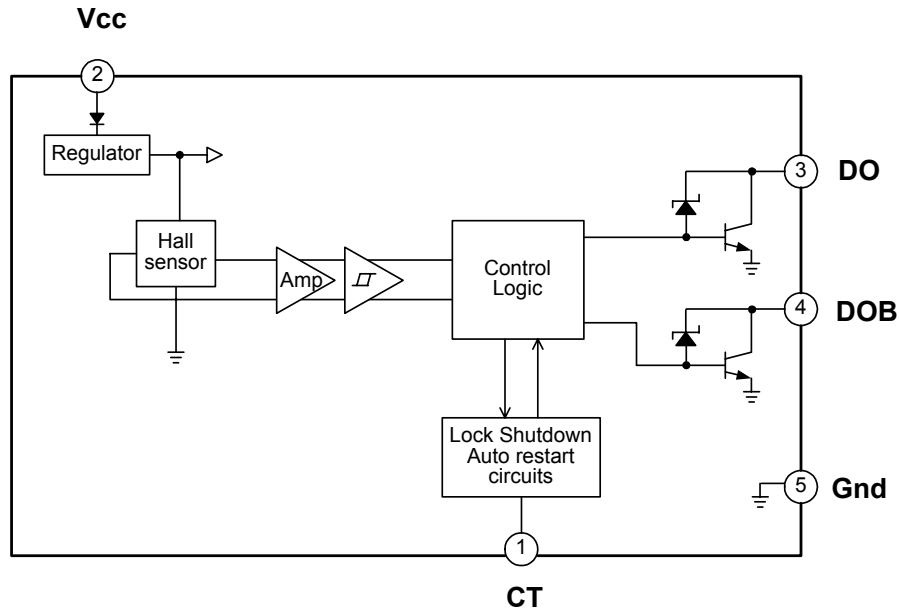

Symbol	P/I/O	Pin #	Description
CT	I	1	Timing cap.
VCC	P	2	Positive power supply
DO	O	3	Driver output
DOB	O	4	Driver inverted output
GND	P	5	Ground

#### SOP-8L/SOP-8L EP

Symbol	Pin #	Description
VCC	1	Positive power supply
DO	2	Driver output
DOB	3	Driver inverted output
NC	4,6,7	Not connected for SOP8
CT	8	Timing cap.
GND	5	Ground

### ■ Magnetic Characteristics

(1mT = 10 Gauss)

#### A grade

Characteristics	Symbol	T <sub>A</sub> = -20°C to +85°C			Unit
		Min.	Typ.	Max.	
Operate Point	B <sub>OP</sub>	10	-	60	G
Release Point	B <sub>RP</sub>	-60	-	-10	G
Hysteresis	B <sub>HYS</sub>	-	100	-	G

#### B grade

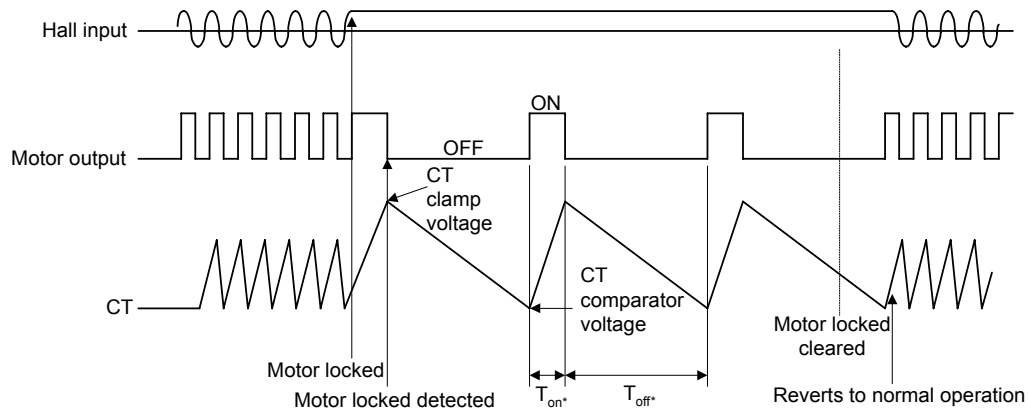

Characteristics	Symbol	T <sub>A</sub> = -20°C to +85°C			Unit
		Min.	Typ.	Max.	
Operate Point	B <sub>OP</sub>	10	-	80	G
Release Point	B <sub>RP</sub>	-80	-	-10	G
Hysteresis	B <sub>HYS</sub>	-	100	-	G

## Hall-Effect Smart Fan Driver

### ■ Rotation detection

The automatic restart circuit detects a motor lock condition and automatically turns off the output current. When the lock condition is cleared, the IC automatically restarts and allows the motor to run. In the AH280, automatic restart is performed in the

following manner. A motor lock condition is detected when the Hall signal stops switching. The output is ON when CT pin is being charged, and OFF when CT pin is being discharged.

Output ON time ( $T_{on}$ ) and OFF time ( $T_{off}$ )  
Determined by the CT pin capacitor  
Where

$$T_{on} = \frac{C \times (V_{CL} - V_{CP})}{I_{CHG}} \text{ (sec)}$$

$$T_{off} = \frac{C \times (V_{CL} - V_{CP})}{I_{DHG}} \text{ (sec)}$$

$C$  is the capacitance of the CT pin external capacitor  
 $V_{CL}$  is the CT pin clamp voltage  
 $V_{CP}$  is the CT pin comparator voltage  
 $I_{CHG}$  is the CT pin charge current  
 $I_{DHG}$  is the CT pin discharge current
