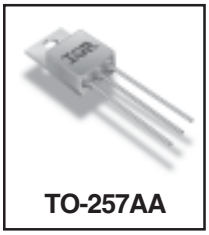
Adjustable Positive Linear Regulator Thru-Hole (TO-257AA)

OM7602ST
OM7602NT
1.5A

Product Summary

Part Number	Input Voltage Range	Adjustable Output Voltage	Package
OM7602ST	4.25V to 41.25V	1.2V to 37V	TO-257 (Isolated)
OM7602NT	4.25V to 41.25V	1.2V to 37V	TO-257 (Non-Isolated)



TO-257AA

Description

This three terminal positive regulator is supplied in a hermetically sealed metal package. All protective features are designed into the circuit, including thermal shutdown, current-limiting, and safe-area control. With heat sinking, these devices can deliver up to 1.5 amps of output current. This unit also features output voltages that can be trimmed from 1.2 volt to 37 volts using external resistors.

Features:

- Adjustable Output Voltage
- Eliminates Stocking Fixed Voltages
- Built-In Thermal Oveload Protection
- Short Circuit Current Limiting
- Isolated / Non-Isolated Hermetic TO-257AA Package ensures High Reliability

Absolute Maximum Ratings @ Tc = 25°C

Notes

① Load and Line Regulation are specified at a constant junction temperature. Pulse testing with low duty cycle is used. Changes in output voltage due to heating effects must be taken into account separately.
② If not tested, shall be guaranteed to specific limits.
③ The specifications are applied over the full operating temperature range.

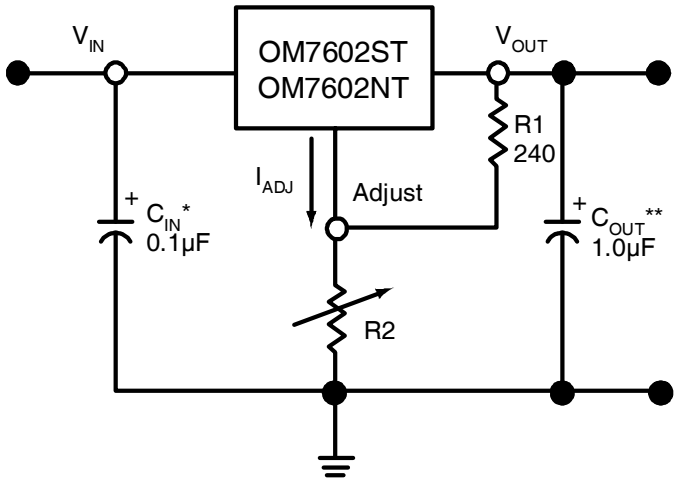
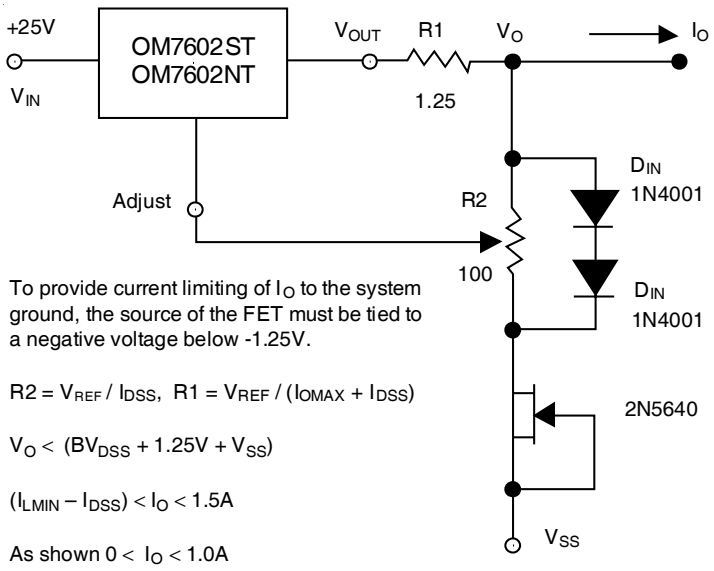
Fig. 7 - Standard Application



* C_{IN} is required if regulator is located an appreciable distance from power supply filter.
** C_{OUT} is not needed for stability, however it does improve transient response.
$V_{OUT} = 1.25V(1 + (R2/R1)) + I_{ADJ}(R2)$
Since I_{ADJ} is not controlled to less than 100µA, the error associated with this term is negligible in most applications.

Typical Applications

Fig. 8 Adjustable Current Limiter



To provide current limiting of I_O to the system ground, the source of the FET must be tied to a negative voltage below -1.25V.

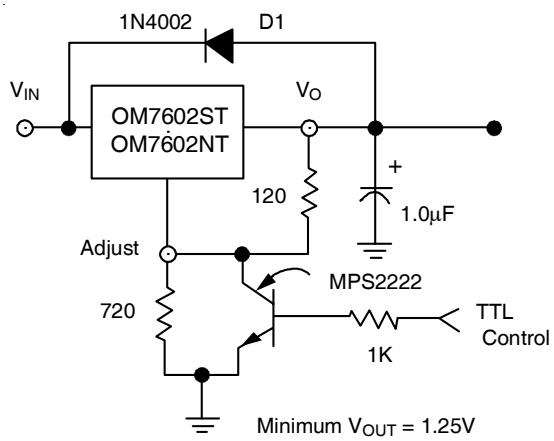
$R2 = V_{REF} / I_{DSS}$, $R1 = V_{REF} / (I_{OMAX} + I_{DSS})$

$V_O < (BV_{DSS} + 1.25V + V_{SS})$

$(I_{LMIN} - I_{DSS}) < I_O < 1.5A$

As shown $0 < I_O < 1.0A$

Fig. 9 5V Electronic Shut Down Regulator



D1 protects the device during an input short circuit

Fig. 10 Slow Turn-On Regulator

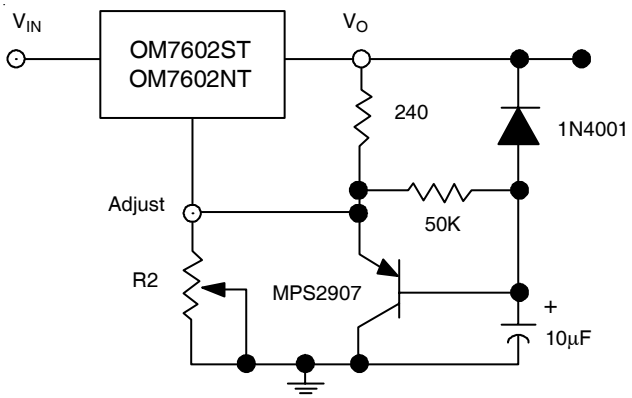


Fig. 11 Current Regulator

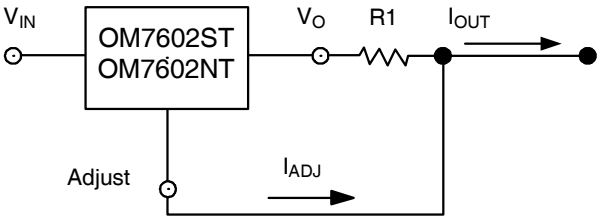

$I_{OUT} = (V_{REF} / R1) + I_{ADJ} = (1.25V / R1) + I_{ADJ}$

$10mA < I_{OUT} < 1.5A$
