

FEATURES

- Maximum output current : 600mA
- Highly accurate: Output voltage $\pm 1.5\%$
- Stability with Low ESR Capacitors
- Low power consumption
- On-chip Protections: Thermal, Short Circuit
- Small input/output differential: 600mV at 600mA
- Adjustable version

APPLICATION

- Battery-Operated Systems
- Portable Computers
- Portable Cameras and Video Recorders
- Reference Voltage Sources
- Instrumentation
- Pagers

DESCRIPTION

The LM8805 series is a low-dropout linear regulator. There are devices designed specifically for battery-operated systems. Ground current is very small (50uA-Typ), that significantly extending battery life. Low power consumption and high accuracy is achieved through CMOS and programmable fuse technologies. Output voltage: 1.5V to 6.0V.

SOT-23-5L(300mW) and SOT-89(500mW) packages are available.

APPLICATION INFORMATION**Detailed Description**

The LM8805 consists of a high-precision voltage reference, an error correction circuit, and a current limited output driver. With good transient responses, output remains stable even during load changes. The SHDN input enables the output to be turned off, resulting in reduced power consumption.

The LM8805 incorporates both over-temperature and over-current protection.

External Capacitors

The LM8805 can stable work with cheap MLCC output Capacitor.

The LM8805 having high ripple rejection ratios, the series can be used with power supply noise. A 470pF capacitor from the Bypass input to ground reduces noise present on the internal reference, which in turn significantly reduces output noise. If output noise is not a concern, this input may be left unconnected. Larger capacitor values C_{bp} be used, but results in a longer time period to rated output voltage when power is initially applied.
